It could reformulate the proposal to shift the burden of proof from consumers to GM. It could change the proposal to separate the diesel-engine problems from the Type 200 transmission and camshaft cases. The latter would let older vehicles get handled while freeing diesel owners and their engine problems for separate treatment—in or out of court.

Another option—longest, toughest and least likely of all—is to prove that GM knew of defects and misled the public by not disclosing them. This would mean first an administrative hearing and then court action. GM would likely fight every inch of the way or at least until all the cars in question have been junked.

The FTC complaint followed a similar "extended warranty" case against Ford Motor Co. over "piston scuffing" and other engine problems.

The proposed consent settlement negotiated by the Cleveland office with GM — like the Ford case—would require GM to make public its service bulletins.

But the proposal also would use GM's existing arbitration agreement with the Council of Better Business Bureaus.

Most of the complaints on the proposed settlement center around the arbitration provision. As it is set up, arbitration would be free to consum-

Continued on Page 8, Col. 1

From three streams to a torrent

During the summer doldrums, our Washington Bureau decided to review the General Motors diesel case.

The time seemed right, since the FTC has taken its annual August recess without voting on a proposed settlement of its case against GM and will not tackle it again until September. What developed was a story that has billowed almost beyond control. The FTC docket bulged with complaints from irate consumers, many state attorneys general and professional consumer groups. But it also contained a formidable GM filing clearly showing that GM was prepared to fight to the end any further action from the FTC.

Midway in the paper war, the reporter decided to aim for the independent expert—a statistical haven between owners filled with fury and GM's calm reassurance that if owners will merely follow the procedure spelled out in their owner's manual, GM will handle their complaints.

The result was several reports from Runzheimer and Co., which sells statistical data—including data on GM diesels—but has no ax to grind. The convergence of these three streams has produced the adjoining torrent of controversy.

Early-August total of 178,686 is 58 pct. above last year

Domestic-car sales best since 1979

By Jenny L. King
Staff Writer

For the eighth consecutive period, domestic new-car sales showed an increase over 1982 levels as they climbed 57.93 percent Aug. 1-10.

Year-to-date sales expanded 17.62 percent beyond the preceding year's and the annualized sales rate figured to 7.35 million based on early August results.

New-car sales of 178,686 were best for Aug. 1-10 since 1979 when 193,306 units were retailed. A year ago, retail sales were only 113,139, close to the modern low of 107,665 posted back in 1958.

The year-to-date total of 4,090,579 was up 17.62 percent from 3,477,871.

On a daily-rate basis, sales in early August were up 40.39 percent. Nine selling days this year averaged 19,854 sales compared with 14,142 for each of eight selling days in 1982.

Largest sales gain among the domestic Big Three was reported by Chrysler Corp. where sales were up 69.51 percent, to 23,183 from 13,676 last year (up 50.64 percent daily rate).

Ford Motor Co. was up 65.24 percent, to 38,880 from 23,530 (up 46.89 percent daily rate). General Motors dealers sold 109,189 new cars in the period, up 52.77 percent from 71,473 (up 35.80 percent daily rate).

• American Motors reported estimated sales of 3,900 units, up 77.27 percent from 2,200 a year earlier (up 57.45 percent daily rate).

Volkswagen of America slipped below Honda as its sales lagged 27.52 percent behind the year-ago amount. VWoA sales numbered 1,638 this year compared with 2,260 a year earlier (down 35.51 percent daily rate). Honda dealers sold 1,896 U. S.-built Accords during the period.

GM sales represented 61.11 percent of the early-August domestic market, down from 63.17 percent a year ago. Ford earned 21.76 percent, up from 20.80 percent. Chrysler had 12.97 percent, up from 12.09 percent.

AMC's share climbed to 2.18 percent from 1.94 percent. VWoA slipped to 0.92 percent from 2.00 percent, and Honda claimed 1.06 percent of the Aug. 1-10, 1983, market.

AMC and VW were the only domestic makes to suffer a sales decline for the period. AMC was estimated to be down 72.73 percent, dropping to 600 from 2,200 units last year. VW was down 27.52 percent. Imperial sales are no longer reported separately; a year ago they were a modest 24 units.

Chrysler Corp.'s other sales showed Plymouth up 80.11 percent, Chrysler up 75.13 percent and Dodge up 56.53 percent. At Ford Motor Co., Ford was up 64.86 percent, Mercury was up 62.90 percent and Lincoln was up 80.83 percent.

At GM, Buick was up 46.70 percent; Cadilac's record sales of 8,618 were up 71.57 percent from 5,023; Chevrolet was up 52.11 percent; Oldsmobile was up 57.31 percent, and Pontiac was up 46.47 percent.

Jeep Cherokee $9,995; old Wagoneer up 12%

American Motors has raised the price of its carryover Jeep Grand Wagoneer four-door wagon 12 percent for 1984 and has placed a tentative tag of $9,995 on its all-new Jeep Cherokee two-door SportWagon.

The '84 Grand Wagoneer Limited is priced at $19,306, up $2,167 or 12.64 percent from the final '83 figure of $17,139. New standard equipment, which AMC values at $754, has been added for '84. On a comparably equipped basis, the increase is $1,413 or 8.24 percent.

The new equipment consists of AM/FM/stereo electronic search-tune radio, clear-coat metallic paint, halogen foglamps and conventional spare tire.

AMC has dropped the Brougham model which was priced at $13,173, so the only Grand Wagoneer available for '84 is $6,133 more than the base '83 model. The '84 unit has a much higher level of standard equipment, however.

The Grand Wagoneer was called the Wagoneer in '83. The Wagoneer name now is used on an all-new line of smaller models.

• The '84 Jeep Cherokee line consists of six models. In addition to the base two-door at $9,995, they are:

Base four-door, $10,295; Pioneer two-door, $10,995; Pioneer four-door, $11,295; Chief two-door, $11,305, and Chief four-door, $11,605.

The new Jeep Cherokee is about 1,000 pounds lighter, 21 inches shorter and six inches narrower than the '83 version, but AMC said it retains about 90 percent of the usable interior space.

Fuel-economy ratings have not been finalized, but AMC expects the '84 base Cherokee to have an EPA city estimate of at least 24 MPG.

AMC also said that the tentative price of the new Jeep Wagoneer will be $12,444. The Wagoneer Limited will be $17,076.

The Wagoneer is a four-door model which AMC has targeted at what it calls the family segment of the four-wheel-drive market.

Wagoneer standard equipment includes 2.5-liter engine, five-speed overdrive transmission, power steering, power brakes, reclining front bucket seats and rear wiper/washer.

Additional standard features on the Wagoneer Limited include automatic transmission, air conditioning, Selec-Trac full-time 2WD/4WD, stereo cassette radio, power windows, power door locks, six-way power front bucket leather seats, electric remote-control mirrors, rear-window defroster and leather-wrapped tilt steering wheel.

T-115 on schedule despite explosion

WINDSOR. — Robots and machinery warehoused for the Chrysler Corp. T-115 van/wagon plant escaped damage in an explosion that caused an estimated $250,000 worth of damage to the former Chrysler engine plant here.

The explosion occurred Saturday evening, Aug. 6, and extensively damaged the front wall of the building. It apparently occurred in a stairwell when fumes of some type were ignited. The Ontario Fire Marshall's Office is still investigating the cause. No evidence of an explosive device has been found, a Chrysler Canada spokesman said.

Engines have not been built at the plant for three years. It has been used as a warehouse for the adjacent assembly plant which is being refitted for T-115 production. Chrysler Canada Data Center, upstairs from the blast site, also escaped damage. The loss is insured, the Chrysler spokesman said.

Chrysler adds 5 Chicago outlets

CHICAGO.—Chrysler Corp.'s zone office here signed five new dealerships in June, setting a record for the installation of new dealerships in the zone for a 30-day period.

New dealers are: Paul H. Tormohlen, Tormohlen Motor Sales, Inc., Freeport, Ill.; Timothy T. Dillon, Marquette Park Chrysler-Plymouth, Inc., Chicago, and Paul P. Demler, 5 Corners Dodge, Inc., Cedarburg, Wis.

Also: Fran't Mancari, Quality Chrysler-Plymouth, Inc., Chicago, and John Gerald, Gerald Dodge, Inc., Skokie, Ill.

Firestone, Budd slate appeal of rim award

By Miles Moore
Washington Staff Writer

KANSAS CITY. — Firestone Tire & Rubber Co. and Budd Co. will appeal a federal jury's award of $4.29 million—the largest amount ever awarded in a multipiece rim case—to a Missouri man and his wife for injuries received in an explosive rim separation.

The jury in the U. S. District Court for the Western District of Missouri ordered Firestone and Budd to split payment of $350,000 in compensatory damages to Larry Hale, owner of a small trucking firm in Sheldon, Mo.

In addition, the jury ordered Firestone to pay Hale $2.8 million in punitive damages, and Budd to pay him $700,000. The jury ordered Firestone to pay $320,000 and Budd $80,000 in punitive damages to Hale's wife, Linda, who also was awarded $40,000 in compensatory damages.

Kelsey-Hayes, another major rim manufacturer and a third defendant in the case, was absolved by the jury.

The Hale case began Oct. 4, 1977, when Larry Hale used an air hose to inflate a tire on a two-ton truck. The multipiece wheel rim, a Firestone RH5° model, separated explosively, striking Hale in the face.

• Hale's top teeth were knocked out, his facial bones fractured, his tear ducts damaged and his hand broken. His nose, which was severed, was reattached.

John C. Risjord, Hale's attorney, said Hale will need at least three more operations to correct problems with facial scars, nasal passages and sinus cavities and to remove a Teflon plate in his eye socket.

Firestone is "exploring various avenues of appeal," said Firestone spokesman James Strandberg, but he added that the company preferred not to discuss its strategy at this time.

"We don't believe the verdict is justified by the facts of the case," Strandberg said.

Budd is obviously "not very happy" about the decision, said company spokesman Paul Sichert. Like Firestone, Budd intends to appeal.

"We haven't fully studied all the options," said company counsel Herman Foster. "We've got plenty of time."

• Before the Hale decision, the largest award ever made in a multipiece rim case was the $1.8 million Goodyear was ordered to pay to Dennis Kuiper, a Montana man whose skull was fractured by an exploding rim.

The Hale case was one of 25 consolidated civil suits seeking more than $175 million in damages against multipiece rim manufacturers. Documents filed in those cases claim that more than 400 instances of explosive separations have caused at least 71 deaths and hundreds of injuries.

One multipiece rim manufacturer has itself instigated a suit.

Redco Corp., a small multipiece rim maker in Red Lion, Pa., filed suit in U. S. District Court in Harrisburg, Pa., claiming that CBS News and the Insurance Institute for Highway Safety slandered the company in a 1981 "Killer Wheels" broadcast on "60 Minutes."

The broadcast caused Redco to lose business, the company claimed.

The judge in the case is considering CBS's motion for summary judgment.

High performance

Jackie Stewart, three-time world driving champion, normally gets a different kind of high performance out of his Goodyear NCT radials at the company's proving grounds in San Angelo, Tex. Stewart used the NCTs to measure up to proving grounds manager Rich Olsen, who is 6-foot-9.

U.S. lighting firm formed by Hella and Tokyo's Koito

FLORA, Ill. — Hella North America, Inc., and Tokyo's Koito Mfg. Co., Ltd., have established a U. S. corporation to produce and supply various automotive lighting equipment for North America.

The new firm, which is headquartered here, is North American Lighting, Inc., and Walter A. Genthe, former president of Hella, has been named president.

The new company's first production item is the tail lamp which will be installed on pickup trucks built by Nissan Motor Mfg. Corp., U.S.A. The rear combination lamp will be supplied starting in January, 1984.

North American Lighting also takes over the other lighting equipment items which had been manufactured and marketed by Hella North America. Hella North America is a subsidiary of Westfaelische Metall Industrie KG (Hella), Lippstadt, West Germany.

Olds, in fifth, leads domestics

Four Japanese makes tops in sales per dealer

Continued from Page 1

112 from 101 sales per dealer last year, followed by Cadillac at 91 compared with 73 in 1982. Cadillac climbed over VW to gain fifth place, VW was sixth among the domestics with 87 sales per outlet, followed by Pontiac at 85 (same as its 1982 average).

Mercury was eighth among the domestics with 75 sales per dealer, up from 64 a year ago. Ninth place went to Dodge where dealers improved to a 63-unit average from 53, and Plymouth was 10th with 55 sales per outlet. It was followed by Chrysler, which showed tremendous growth going from 31 to 47 sales per dealer.

Lincoln followed Chrysler in the domestic ranking with a 32-per-dealer average; then AMC which, on the basis of its sales minus Renault products, dropped to 21 from 30 sales per dealer, and last was Imperial, dropping to 2 sales per outlet from 4 the preceding year.

As the retail sales climate improved, new sales-per-dealer highs are announced. Buick's 142 is a record, replacing 126 notched in 1981 and 1976. Chrysler's 47 squeezed past the former record of 46 set in 1977.

For the import franchise-holders, there was more good news. Volvo dealers averaged a record 119, up from the former high of 104 noted last year. Mercedes-Benz' 86 was better than the record 80 from 1981. BMW, Saab, Renault, Isuzu and Jaguar dealers all traced record first-half averages in their books.

The average sales per outlet for the top 20 imports was 89, also a record, and was up from 63 a year ago.

• Average sales per outlet of domestic nameplates featured the full-size Oldsmobile (combined 88 and 98 models) as the hottest in sales-per-outlet average, replacing the Oldsmobile Cutlass Supreme sedan/coupe. The 88/98 average was 57 per outlet this year, compared with Cutlass' 48 per outlet in 1982. Second-best this year was the full-size Cadillac (Fleetwood/DeVille) with 55 sales per outlet, followed by Renault Alliance and Oldsmobile Cutlass Supreme with 54 each.

Fifth-best was VW Rabbit at 46 per dealer, and Buick's Regal coupe/sedan was sixth with 41 per outlet. Ford Escort's 40 average was seventh, followed by Buick LeSabre/Electra at 38, Plymouth Reliant at 34 and Dodge Aries and Cutlass Ciera tied at 26 sales per dealer.

A year earlier, the top 10 nameplates were: Oldsmobile Cutlass Supreme, VW Rabbit, full-size Cadillac, Oldsmobile 88/98, Buick Regal, Ford Escort, Plymouth Reliant, Buick LeSabre/Electra, Buick Skylark and Dodge Aries.

Domestic nameplate leaders by market segment this year were: Subcompact—Renault Alliance, 54; compact — Plymouth Reliant, 34; intermediate—Cutlass Supreme, 54; standard—Oldsmobile 88/98, 57, and luxury, Cadillac Fleetwood/DeVille, 55.

This year's top domestic nameplates by make in sales per outlet were as follows: Oldsmobile—Olds 88/98; Buick—Regal; Chevrolet — Cavalier and full-size Chevrolet; Ford — Escort; Cadillac—full-size Cadillac; Volkswagen — Rabbit sedan; Pontiac—2000 and Grand Prix; Mercury — Marquis and Grand Marquis; Dodge — Aries; Plymouth—Reliant; Chrysler — New Yorker Fifth Avenue; Lincoln—full-size Lincoln; AMC — Eagle and Renault-Alliance.

GMC offers proven specs to aid buyers

DETROIT.—GMC Truck is introducing a computerized heavy-truck ordering system to help small fleets and operators select proven specifications matched to specific application requirements for greater cost-effectiveness and operating efficiency.

The GMC Customer Proven (CP) system identifies nearly 300 driveline combinations which have been effectively used by some of the nation's most successful major fleets in a wide range of applications, said John D. Rock, manager of the GMC Truck & Coach Operation.

"CP is designed to help operators remove much of the mystery and confusion associated with a multitude of Class 8 truck specifications by ordering trucks which have proven themselves in demanding job requirements in the field, as well as at General Motors engineering and test facilities," he explained.

Emphasizing that the CP program is not unduly restrictive, Rock pointed out that more than 7,000 combinations of drivelines, wheelbases, suspensions and axle ratios are available with the new system.

"CP has been established to help operators select the 'right track to the right truck for the right application' and avoid the costs of nonessential equipment," he said.

The CP program he added, is another tangible GMC response to a growing need for cost-control measures in all segments of the truck industry which faces unprecedented cost and competitive pressures.

• "Truck firms simply cannot afford needless costs for nonessential equipment and operating inefficiencies in today's intensely competitive environment," Rock said, "and CP is an effective means for reducing costs and improving operating efficiency."

A computerized truck-specification data bank representing millions of miles of successful heavy-truck operations is the foundation of the CP system.

"Without CP, many of the

Jeep's 'dynamic duo' for 1984

The Wagoneer Limited (foreground) and the downsized Cherokee are top features of the Jeep 1984 model lineup. The smaller Jeep SportsWagons are 21 inches shorter, six inches narrower and 1,000 pounds lighter than the 1983 counterparts, yet retain 90 percent of the interior roominess.

Compact Jeeps aimed at a 'changing market'

SOUTHFIELD, Mich. — Jeep's new 1984 compact Wagoneer and Cherokee SportWagons are targeted at off-road enthusiasts, families requiring versatile transportation and luxury four-wheel-drive buyers, according to Joseph E. Cappy, American Motors marketing group vice president.

"Our new Jeep SportWagons are designed to have broad appeal in a changing market," he said.

Cherokee and Wagoneer are the newest entries in the compact sports/utility-vehicle field —a segment Cappy expects to claim nearly 25 percent of the total four-wheel-drive market by 1985.

"We expect the new Wagoneer and Cherokee to gain instant popularity," Cappy said. "They have Jeep's traditional ruggedness in a stylish, economical, dependable package."

He said marketing studies indicate the company can expect to attract many young passenger-car owners and many women buyers who want the security and flexibility afforded by a vehicle that provides both 2WD and 4WD.

According to Cappy, company studies show that buyers of compact sports/utility vehicles are very likely to be influenced by workmanship, bad weather driving concerns, off-road recreational potential, on-road performance and handling, fuel economy, and use of the vehicle as the chief family car.

• Cappy described the three basic target groups for Wagoneer and Cherokee as follows:

The enthusiast group. They are off-road oriented and well versed in all aspects of four-wheel-drive. Prospective buyers are attracted to contemporary exterior styling and functional comfort, convenience and control features.

The family sports/utility group. It includes people with four-wheel-drive experience along with two-wheel-drive wagon owners who want greater versatility and security in the family car.

The luxury four-wheel-drive

Newcomer to Mack's line

The Mack MS250 Mid-Liner, new to the mid-range diesel line, blends key chassis components of the MS300 Series with the MS200's 175-HP diesel engine. Mack said it's for operators who need higher hauling capacity without additional horsepower.

Mack expands Mid-Liner series with 'blend' model

ALLENTOWN, Pa. — Mack Trucks, Inc., has expanded its Class 6 and 7 medium diesel Mid-Liner series with the addition of the MS250 truck chassis.

The MS250 model blends key chassis components of the MS-300 series with the MS200 175-HP diesel engine, Mack said, for operators who require higher hauling capacity without additional horsepower.

Standard features include a 12,000-pound front axle, 20,000-pound rear axle, the Spicer 5552A five-speed synchronized transmission, full air brakes and integral power steering. Options include a 23,000-pound rear axle, a 22,000-pound two-speed Eaton rear axle and the Spicer 5852A transmission.

The 175-HP Mid-Liner diesel incorporates many design features similar to Mack's heavy-duty diesel powerplants, including turbocharging, chassis-mounted Charge-Air cooling for greater fuel efficiency and durability, direct injection, and rebuildability with wet-type cylinder liners, Mack noted.

"Since introduction in late 1979, Mack's Mid-Liner trucks have been used in a number of applications, including the daily rental and one-way rental markets, and is hastening the switch from gasoline to diesel power," a Mack spokesman said.

truck industry news

Truck registrations hit four-year high in first half of 1983

First-half registrations of new trucks of all types in the U. S. were the highest in four years, and the June total was the best of any of the six months.

R. L. Polk & Co. reported 1,365,041 new-truck registrations in the January-June period, an increase of 13.3 percent over last year's 1,204,538 units.

In the first half of 1979 — the year which marked the start of the recent truck slump — new-truck registrations in the U. S. totaled 1,774,709 units.

June tallies totaled 274,989 units, 21.9 percent greater than last year's 225,522.

Through June, registrations were higher than a year ago in only one of the three major market segments, but were up in four of the eight weight classifications.

Six-month light-truck tallies totaled 1,287,867 units, a gain of 15.2 percent over the year-earlier 1,117,959. Medium trucks were down only one percent to 19,075 units, compared with 19,265 last year. Heavies were off 13.7 percent, from 67,314 units in 1982 to 58,099.

Group 1 registrations in the first half totaled 716,615, an increase of 16 percent over the previous year's 617,788. There were 565,417 Group 2 tallies, up 15.3 percent over the year-ago 490,467.

Group 3 registrations through June were down 39.9 percent to 5,835 units, compared with 9,704 in the first half of 1982.

There were increases in two of the three medium-truck weight classes, and a sizeable slump in the third.

In the first six months, there were 149 Group 4 registrations, compared with only five last year. The Group 5 count slipped from 755 last year to 270, a decline of 64.2 percent.

Six-month Group 6 registrations totaled 18,656 units, an increase of 0.8 percent over the

Continued on Page 16, Col. 4

HD registrations for six months decline 13.7 pct.

Registrations of new heavy trucks in the U. S. in the first six months of 1983 dropped almost 14 percent below last year's count, with declines in both weight groups making up this market segment.

In the January-June period, according to R. L. Polk & Co. statistics, 58,099 Groups 7 and 8 trucks were registered, a decrease of 13.7 percent from the 67,314 tallied in the first half of 1982.

Six-month registrations of Group 7 vehicles totaled 23,149

Champion chairman

Veteran race truck builder Bill Stroppe, left, and off-road racer Rod Hall flank Chrysler Corp. Chairman Lee Iacocca at a presentation of off-road racing trophies. Hall was Overall Points Champion for 1982 and SCORE International 1982 Point Champion for points earned campaigning his Dodge four-wheel drive pickup. Stroppe and Hall presented the trophies to Iacocca in appreciation of Chrysler's support of their racing activities.

GMC offers specs to assist buyers

Continued from Page 15

smaller fleets and truck operators would not have convenient access to this information concerning tried and proven specifications," Rock pointed out.

The customer benefits from CP are far-reaching, beyond the initial advantages of being a simplified means of selecting established specifications for a precise application, he added.

For example, Rock noted, delivery time is substantially compressed from the time the order is placed since the CP truck is already in the computer system ready for production, or it may already be in stock.

In addition, he said, service-parts inventory requirements are significantly reduced and service and maintenance operations are facilitated by the high degree of CP truck component commonality.

The CP program also permits addition or deletion of options, trim and comfort accessories, depending on operator preference, he noted.

6-month tally is 58,099

HD truck registrations show 13.7-pct. decline

Continued from Page 15

units, down 23.3 percent from the year-ago 30,186. The Group 8 total was off 5.9 percent to 34,950 units, compared with 37,128 last year.

Second-quarter registrations this year were almost 20 percent higher than those in the first three months, 31,578 versus 26,521. A year ago, the April-June count was 21.3 percent greater than the first quarter's, 36,898 versus 30,416.

In June, 10,607 Groups 7 and 8 trucks were registered, a decline of 7.4 percent from last year's 11,456 units.

Through June, International accounted for 24.44 percent of the industry total with 14,203 registrations. Its share was 2.77 percentage points over last year's 21.67 percent on 14,589 tallies.

No. 2 Ford's share this year was down 1.61 points from 1982. Its 12,447 tallies through June took 21.42 percent of the industry total, compared with 23.03 percent a year ago with 15,501 units.

The biggest loss in penetration in the first half was suffered by GMC. Its share was down 6.04 points from a year ago, dropping to 12.85 percent on 7,464 tallies. In 1982, its six-month total of 12,717 units accounted for 18.89 percent of the total.

Freightliner scored the biggest gain in penetration in the January-June period. Its total of 4,956 tallies accounted for 8.53 percent, 3.16 points greater than last year's 5.37 percent on 3,613 registrations.

No !?&$, says Massachusetts

BOSTON. — A Massachusetts appeals board upheld the Registry of Motor Vehicles' action in revoking vanity automobile registration plates carrying the symbols — !, ?, & and $.

Holders of vanity plates carrying such symbols had appealed the move by Registrar. Alan A. Mackey to the state Board of Appeals for Motor Vehicles, Liability Policies and Bonds.

The state board ruled that the symbols were inconsistent "with the purpose of the regular and proper identification in law enforcement."

1st-half truck registrations highest charted in four years

Continued from Page 15

18,505 tallies in the like period a year ago.

Registrations were down from a year ago in both heavy-truck weight classifications, but the Group 8 decline was far smaller than the Group 7 slump.

Through June, there were 23,149 Group 7 registrations, a drop of 23.3 percent from last year's 30,186 units. The Group 8 total was down 5.9 percent to 34,950 units in the first half, compared with 67,314 a year ago.

• Chevrolet had a slight lead over Ford in June registrations, but still trailed Ford by more than 16,000 units at the end of the first half.

Through June, Ford had 433,863 registrations good for 31.78 percent of the industry total, 1.60 percentage points higher than last year. A year ago, Ford was No. 2 with 363,511 tallies which accounted for 30.18 percent.

Chevrolet accounted for 30.59 percent of the six-month industry total with 417,579 tallies, a decline of 1.83 points from last year's 32.42 percent on 390,445 tallies.

In the first half, Ford built up a small lead over Chevrolet in light-truck tallies, and was ahead in the big-truck count by more than 11,000 units.

Ford's light-truck registrations through June totaled 417,059 units, compared with 411,968 for Chevrolet. The big-truck total was 16,804 for Ford and 5,611 for Chevrolet.

Other than Ford, Freightliner, Volvo, Jeep and the miscellaneous group were the only gainers in penetration in the January-June period.

Jeep seeks broader market with new SportWagon line

Continued from Page 15

group. Prospects include affluent owners of large sport utility vehicles who are seeking a sleeker, smaller vehicle.

"We expect that the enthusiast group will account for about 30 percent of the compact SportWagon sales, with the main emphasis on Cherokee 2-door models," Cappy said.

"The family group should capture about 55 percent of sales, with the Cherokee 4-door the volume leader. The luxury group will account for about 15 percent of sales and will be mostly Wagoneer Limited buyers."

Cappy said the Wagoneer and Cherokee are the first totally new vehicles introduced by Jeep in 20 years.

"They represent a quarter billion dollar investment in the future," Cappy said, "one that will assure Jeep's leadership in four-wheel-drive."

GMAC promotes Buller

DETROIT. — Larry W. Buller has been promoted to manager of the General Motors Acceptance Corp. branch in Merritt Island, Fla. He succeeds Johnny L. Ricketson who has been appointed assistant control branch manager in Indianapolis.

terior, lightweight alloy wheels, racing mirrors and fender flares.

The Wolfsburg edition Scirocco is fitted with VW's new 1.8-liter four-cylinder power plant (the same engine is in the Rabbit GTI). With a top speed of 110 MPH, the car is the fastest VW ever sold in the U. S.

The new engine increases horsepower by some 20 percent over that of the 1983 engine. Horsepower output: 90.

Those lightweight wheels are a fairly widespread option for 1984. The new Fiero from Pontiac, for example, while not boasting a lengthy list of add-ons, does have cast aluminum wheels available.

• Big news from American Motors this fall is the Encore, a hatchback version of the Alliance. Options on Encore include upgrade trims on the S, LS and GS types. There will be, in addition, a five-speed manual with overdrive transmission and an automatic three-speed.

The popular AMC Eagle also is being offered with the five-speed overdrive gear box and the three-speed automatic.

Jeep options include the big 4-2-liter engine along with those transmission offerings on the other AMC passenger cars.

In the all-new XJ line an optional 2.8-liter V-6 built by General Motors is an option with the five-speed and the three-speed automatic also is available. The options list includes, too, full-time or part-time four-wheel drive.

At Ford Motor Co., the option news also is under the hood. A 115-horsepower 1.6-liter turbocharged engine will be optional in the Ford Escort GT, the Mercury Lynx RS and Ford EXP. That availability may not be solid on public introduction day, but the option will spread as the engine becomes available.

The SVO (Special Vehicle Operations) Mustang option comes with an intercooled, multipoint injection, turbocharged engine displacing 2.3 liters. It will turn out some 165 HP and promises to be the No. One talked-about powerplant in 1984.

Buick is the turbocharging division at General Motors and it is in the turbo area the division puts on the dog this year.

For '84 the Skyhawk gets turbo power with the optional 1.8-liter, 130 HP engine. And, across the line at Buick, the GM 4.3-liter diesel is an option — except on the T types.

Chevrolet Division will offer a sporty Eurosedan version of its Celebrity. That will mean a European style ride because of suspension hardening and such niceties as Lear-Seigler bucket seats and all-weather tires.

At Chevy the watchword is a car for everyone, again, and a look at the engine availability reconfirms it. There are choices on the Malibu, for instance, of engines ranging in displacement from 3.8 liters to 5.0 liters with the 4.3-liter diesel tossed in for good measure.

Engine changes shake up the parts market

Spark plugs continue to be the engine component most often replaced as part of a tuneup.

According to Champion Spark Plug Co.'s annual survey of the parts and services included in a tuneup, 81 percent of all ignition work performed in 1982 included new spark plugs. This statistic has remained virtually constant since 1976.

As expected, certain parts are playing lesser roles in tuneups as engine designs change. New points were part of 75 percent of tuneups in 1976, but only 47 percent in 1982. New condensers, once part of 62 percent of tuneups, are now in only 36 percent, according to Champion.

"The decline in the use of points and condensers, obviously, is because they are no longer used in engines with electronic ignition," David L. Walker, Champion's director of automotive technical services, said.

"What is interesting, however, is that despite the fact that electronic ignition systems have been installed on all U.S.-made cars since 1975, there is still a large market—47 and 36 percent respectively — for points and condensers. Many of the pre-electronic ignition cars are still on the road and in need of tuneups," Walker said.

The use of new rotors, distributor caps, and ignition wires as parts of a tuneup has remained relatively stable over the past six years, the survey showed. In 1982, rotors were replaced in 29 percent of the tuneups; distributor caps in 23 percent, and ignition wires in 14 percent.

"With the higher voltage requirements in modern engines, more attention needs to be paid to rotors, distributor caps, and ignition wires, which under greater load may show increased wear," Walker said.

The installation of new PCV valves grew from 17 percent in 1976 to 20 percent in the recent survey; new air filters increased from 51 percent to 59 percent.

Parts included in a Tuneup

Automotive Competitive Comparisons and Product Presentation Programs

SCOTTI SSDD SCHOOL OF DEFENSIVE DRIVING

These programs are designed to help those involved in the auto industry (such as advertising staff, salesmen, training managers) to better understand their vehicles or their competition vehicles.

These hands on seminars can take ride, handling, luxury, performance and other key features and translate them into first person experiences that won't be forgotten.

Programs can be conducted throughout the country.

Courses are flexible in nature and can be altered to handle small or large groups in a single day.

The Scotti School of Defensive Driving is an independent advanced driving school which has catered to the needs of business, industry, and law enforcement agencies for the past 9 years. SSDD is well known for its outstanding work in training drivers of executives and diplomats in the art of anti-terrorist/anti-kidnapping techniques.

Import registrations on the rise

By Jenny L. King
Staff Writer

New imported-car registrations were up 3.39 percent in May compared with the preceding month, and they rose 13.83 percent when matched with May, 1982, figures.

The imports' May market penetration, however, was at its lowest point thus far in the calendar year.

According to figures compiled by R. L. Polk & Co., import registrations totaled 215,278 in May, up 3.39 percent from 208,211 in April, and up 13.83 percent from 189,123 for May, 1982.

Import market penetration in May was 27.85 percent, up from 26.72 percent a year earlier but the shallowest of the current calendar year. Import penetration has declined steadily from 32.09 percent in January to 27.85 percent in May.

Year-to-date import registrations numbered 1,014,550, up 16.13 percent from 873,657 for the first five months of 1982. Penetration the first five months, 1983, was 29.93 percent, up from 28.54 percent in 1982.

In May, Toyota claimed first place among new imports, with Nissan placing a close second. Toyota dropped 4.41 percentage points, to 20.82 percent from 25.23 percent last year, while Nissan had 19.82 percent this year compared with 20.62 percent in May of 1982.

Third-place Honda dipped to 15.87 percent from 16.17 percent, Mazda was fourth with 6.53 percent and Subaru fifth at 5.93 percent. Volkswagen slipped to sixth from fifth place and dropped 0.73 percentage points. Renault Alliance was seventh with 5.21 percent of the import total, followed by Volvo, Mercedes and BMW.

The top 10 imports accounted for 88.31 percent of the import market segment, down from 81.72 percent in May a year ago.

• In the first five months of 1983, Nissan picked up 1.36 percentage points, Mazda was up 0.07 percentage points and Volvo climbed 0.22 percentage points. Toyota lost the most ground, down 2.52 percentage points during the period. Ten imports accounted for 88.63 percent of the market, down from 90.32 percent last year.

Japanese-buit imports claimed 72.01 percent of the import total in May, down from 77.82 percent a year earlier. U. S. imports — VW Rabbits, Renault Alliances and U. S.-built Honda Accords — represented the secondly largest piece of the total, 10.23 percent. Cars from West Germany were third at 9.23 percent, and Swedish products were fourth at 5.20 percent. ("U. S. imports" is Polk's term for cars built in this country by foreign-based companies.)

Registrations by country of origin in May were as follows:

	May, 1983	May, 1982
Japan	155,021	147,181
United States	22,016	7,488
West Germany	19,872	19,357
Sweden	11,185	8,318
France	4,558	4,116
Great Britain	1,505	922
Italy	1,047	1,536
Ireland	74	205
TOTAL	215,278	189,123

Registrations by country of origin for the five months were:

	5 mos., 1983	5 mos., 1982
Japan	744,915	677,628
West Germany	99,457	89,046
United States	95,356	39,781
Sweden	46,396	35,833
France	18,073	19,173
Great Britain	5,829	3,478
Italy	4,270	7,333
Ireland	254	1,385
TOTAL	1,014,550	873,657

Imported truck registrations totaled 36,829 in May, up 10.23 percent from 33,410 last year. The breakout by manufacturer was:

	May, 1983	May, 1982
Toyota	13,301	11,631
Nissan	9,846	7,384
Mazda	5,458	3,542
Isuzu	2,041	.....
Volkswagen	.....	2,276
Others	6,183	8,577
TOTAL	36,829	33,410

Registrations of trucks during the first five months were:

	5 mos., 1983	5 mos., 1982
Toyota	59,439	54,359
Nissan	45,050	37,697
Mazda	25,065	.....
Dodge Ram 50	10,274	13,937
Ford Courier	.....	13,609
Others	36,049	50,436
TOTAL	175,877	170,038

Hatchbacks complement Alliance line for '84

Encore joins AMC-Renault team

The Renault Encore, a follow-up act to the Alliance, is waiting in the wings for introduction this fall.

The Encore, a hatchback version of the Alliance, is the second entry into the subcompact market for the American Motors-Renault partnership.

While sharing the basic platform of the Alliance, which enjoyed sales topping 100,000 in its first year, the front-wheel-drive Encore has an aerodynamic rear liftgate with wraparound glass and a spoiler, which is standard on high-line models and optional on other models.

Six Encore models are offered, varying by trim and equipment levels. The 3-door version is available in base, custom S, deluxe LS and luxury/sport GS versions; the 5-door is offered in S and LS models. The tentative base prices of the six models run from $5,755 to $7,547.

Powered by a transverse-mounted, electronically fuel-injected 1.4-liter engine, Encore has rack and pinion steering and an independent front suspension system.

An overdrive 4-speed manual transmission is standard on base and S models, and an overdrive 5-speed manual transmission is standard on LS and GS models. A 3-speed automatic transaxle is an option on all models.

• These powertrain combinations are identical to those of the Alliance, which offered estimated fuel economy ratings of 37 MPG city and 42 MPG highway in 1983.

Primary competition for the Encore was identified as the Escort and Chevette hatchbacks.

Wheelbase of both the 3-door and 5-door models is 97.8 inches, and overall length is 160.6 inches. Curb weight is 2,010 pounds for the 3-door and 2,044 pounds for the 5-door.

The standard tire on the manual-drive models is a 175/70R-13 steel-belted radial, and with the automatic transmission, tires are 155/80R-13 glass-belted radials.

Encore's similarities to Alliance continue on the inside, with pedestal front seats mounted on twin curved tracks. The seats in the LS and GS models feature six-way adjustment, reclining and rocking.

Encore's split folding rear seat increases cargo carrying capability.

Among the many options available on the Encore are the Systems Sentry, which electrically monitors fluid levels in the vehicle, and a keyless entry system which uses infra-red light waves activated from a key chain.

Encore is available in 10 exterior colors and four cloth and two vinyl interiors are offered, depending on the model. A leather seat trim option is available.

• The Alliance was not significantly changed for the 1984 model year, due to a "why change a good thing" attitude on the part of AMC and Renault.

Among the refinements it received are improved audio systems and the addition of a second windshield washer orifice. A decklid luggage rack is a new option.

Tentative base prices for Alliance's six models range from $5,959 to $8,014.

AMC has dropped the Spirit, Concord and Eagle SX-4 models from its lineup, thus making the "senior" Eagle the sole surviving AMC-developed car line. Not including the Alliance and Encore, the AMC model count is down to four for 1984 from 10 in 1983 and 23 in 1982.

The 1984 Eagle is offered in two body styles—a 4-door sedan and 4-door wagon. The sedan will have only a DL model, while the wagon is available in DL, Sport and Limited series.

Standard on all models is a new in-line 2.5-liter (150-CID) 4-cylinder engine. An in-line 4.2-liter (258-CID) 6-cylinder engine is available as an option.

Transmissions for the Eagle include a standard 4-speed manual, as well as an optional 5-speed manual and 3-speed automatic.

All four Eagle models feature the Select-Drive System which allows motorists to choose between two-wheel drive and four-wheel drive with the flip of a switch.

The Encore, Alliance and Eagle are covered by 12,000-mile, 12-month warranties, three-year No-Rust-Thru warranties and an additional 12/12 Extended Powertrain Protection program.

AMC FOR 1984

	Wheelbase (Inches)	Length (Inches)	Width (Inches)	Height (Inches)	Curb Weight (Pounds)
Renault Encore 3-door hatchback	97.8	160.6	65.0	54.5	2,010
Renault Encore 5-door hatchback	97.8	160.6	65.0	54.5	2,044
Renault Alliance 2-door sedan	97.8	163.8	65.0	54.5	1,969
Renault Alliance 4-door sedan	97.8	163.8	65.0	54.5	2,000
Eagle 4-door sedan	109.3	180.9	72.3	54.4	3,169
Eagle 4-door wagon	109.3	180.9	72.3	54.6	3,384

Still flying for '84

Although American Motors has dropped the Spirit and Concord lines, the Eagle remains. The 1984 two-wheel-drive and four-wheel-drive Eagle is offered in both four-door sedan and wagon body stayles. Eagle has Select-Drive, which enables the driver to select either driving mode with the flip of a switch.

Renault Alliance receives refinements

Alliance, the first offspring of the American Motors-Renault union, is not significantly changed for the 1984 model year. Added features include improved audio systems and an optional decklid luggage rack.

Earnhardt consignment lots move cars at rapid rate

TEMPE, Ariz. — There is plenty of action here at Tex Earnhardt's used-car lots.

The cars are moving out rapidly under a consignment franchise, called Triex, according to Gary Langseth, sales manager. Triex was developed in California by the founders of the Century 21 realty organization.

Langseth said that the oldest cars sold at the lots are 1977 models and cars have been selling at between 45 and 50 each month.

"It is very simple," he said. "The used-car owner advises us to sell his or her car and we make an agreement about the price. We advise that the car can remain on the lot for 60 days and if it doesn't sell, it is returned to the owner."

In the consignment business for the past eight months, Earnhardt said that owners who bring their cars to him are happy because they know what they must pay in cleanup and listing fees, what must be paid in commission when the car is sold and how much they can take to the bank when the sale is completed. The dealership mentioned a fee of $95 up front.

The Earnhardt dealership gets involved in all factors of the sale, including liens and insurance. Earnhardt said this is important because most late-model used cars carry a lien.

Triex, for an initial membership fee of $10,000 and monthly fees of about $2,000, provides advertising, promotion and public knowledge of the Triex sticker with its firm price on the window of every used car sold under the franchise.

Between 20 and 24 salespersons are working on the system at Earnhardt's lots and they are producing results so far amounting to sales of 94 percent of the used cars, Earnhardt said.

The dealership is very happy with the success of the Triex system, he said, because only the finest cars are taken as trade-ins for new cars sold by Earnhardt's dealership.

He added that older or suspicious automobiles absorbed in tradeins are sold to wholesalers and this leaves the Earnhardt lot full of quality cars.

Cars have been selling at a rate of between 10 and 12 days after receipt, Langseth said.

Toyota Cressida becomes Griffith Panther

Jack Griffith is modifying Toyota cars and calling them the Griffith Panther GTS (Cressida) and Griffith Panther GTC (Celica Supra). The modification includes a turbocharger system. The cars will be sold through selected Toyota dealerships and will be priced from $18,000 to $21,000. No more than 1,250 will be produced by the end of the 1984 model year.

Griffith modifying Toyotas for high-performance fans

JACKSONVILLE, Fla.—Jack Griffith, whose high-powered Griffith cars were widely known in the "Golden Age of Horsepower" in the 1960s, has turned his hand to modifying Toyotas.

He calls them the Griffith Panther GTC and the Griffith Panther GTS. The GTC is a Toyota Celica Supra and the GTS is a Toyota Cressida.

He plans to produce no more than 1,250 of his Panthers by the end of the 1984 model year. They will be priced between $18,000 and $21,000 and will be sold through selected Toyota dealerships.

"What we've done," said Griffith, "is take a pair of cars that are already stellar performers in their own right and, with a specially designed package of modifications, turn them into what might be called 'everyday exotics' that will perform on a par with the best European and American high-performance cars."

The Griffith cars that first appeared in 1964 were, like Carroll Shelby's Cobras, a hybrid of a British-built two-seater with a Ford V-8 engine.

• The Panther GTC and GTS, however, achieve their performance increases not by changing engines but by the installation of a turbocharger system designed by George Spears, of SPEARCO Turbo Systems, for Jack Griffith Enterprises.

The turbocharged system is designed to reach about 193 HP. Griffith said the turbocharged engines are emissions-certified in 49 states, with California certification expected shortly.

Other changes include a tuned suspension and exhaust system and special graphics package.

The Panther GTS (Cressida) also will feature high-performance wheels and tires, aerodynamic rear wing, new front grille and spoiler and driving lights and a modified interior.

All Panther cars will carry a 45,000-mile and/or 5-year insured warranty on all Griffith engine parts. Each car will have a number plate on the instrument panel to indicate when it was produced.

Griffith Enterprises expects production of the GTS to begin this fall.

Toyota turbos

Griffith Panthers include new sway bars, a new exhaust system and a turbocharged engine designed to reach about 193 HP.

Salaried workers get $558 million in GM savings plan

DETROIT. — General Motors salaried employes in the U. S. who participate in the GM Savings-Stock Purchase Program (S-SPP) received $558 million Aug. 1, representing $2.50 for every dollar saved during 1980.

Some 65,000 employes opted for distribution of their 1980 S-SPP assets and received GM common stock, government securities and cash valued at $390 million.

More than 25,000 employes chose to leave $168 million in the tax-sheltered trust until they retire or decide to withdraw their assets earlier under terms of the program.

The program encourages employes to set aside a portion of their pay, which is then partially matched by GM and placed in one of five investment options available to each employe.

Currently, 80 percent of GM's U. S. salaried employes participate in the program and save an average of 9 percent of their compensation.

Since the inception of the S-SPP in 1955, GM employes have saved nearly $4 billion. Their savings, combined with GM's contribution, have been used to purchase 83 million shares of GM common stock, and more than $2 billion in U. S. government bonds and other securities.

Chevy for Bachrodt

POMPANO BEACH, Fla. — Louis Bachrodt III signed a Chevrolet sales and service agreement.

Milestone reached 8 weeks ahead of 1982

Year's auto output tops 4 million

By Mary Beth Mayer
Staff Writer

The domestic auto makers reached a milestone last Wednesday (Aug. 7) as the four-millionth automobile of 1983 was assembled, about eight weeks earlier than in 1982. Last year, the four-million mark was reached Oct. 11.

So far this year, the manufacturers have built 4,058,722 cars, a 22.00 percent gain from 3,326,860 units finished in the comparable year-ago period.

Last week's estimated production was 109,358 units, a 6.74 percent increase from the previous week's 102,455, and a 45.41 percent jump from last year's 75,207.

Breakdown for last week's production by company was: General Motors, 47.89 percent; Ford Motor Co., 29.20 percent; Chrysler Corp. 15.41 percent; American Motors, 3.98 percent; Volkswagen of America, 2.15 percent, and Honda 1.37 percent.

GM was the only maker with plants down last week. Its Detroit, Van Nuys and Willow Run facilities were idle for model changeover. Van Nuys reopened last Friday (Aug. 19), while Willow Run and Detroit are slated to resume operations today (Aug. 22).

Overtime was scheduled last week at GM's Flint plant (Buick Regal) and Ford's Kansas City facility (Tempo/Topaz). Chrysler's Jefferson point also worked overtime last week.

obituaries

Ross Roy, 85; auto ad pioneer, head of agency

DETROIT.—Ross Roy, 85, chairman of Detroit-based Ross Roy Advertising, died Aug. 16 at his home in Grosse Pointe Shores, Mich., after a brief illness.

Mr. Roy was the last survivor of a group of Detroit advertising agency pioneers—Henry T. Ewald, Theodore F. MacManus and Lou Maxon—whose agencies grew up with the auto industry.

Mr. Roy founded his agency in 1926. Today it is one of the top 25 worldwide. He had been a prominent business and civic leader in Detroit.

Mr. Roy was an auto salesman in the mid-1920s when he devised the industry's first product comparison study to gain a selling edge over competitors. He sold Dodge.

His knowledge of Dodge cars and news of his unusual merchandising and selling techniques led to his being asked to provide his services for Dodge and, after Chrysler Corp. acquired it, for the entire corporation.

Edward L. Cleary

TEQUESTA, Fla.—Edward L. Cleary, 79, retired executive vice president of the Chicago Automobile Trade Assn., died here Aug. 6. Known as "Mr. Auto Show," Mr. Cleary was the general manager of the Chicago Automobile Show from 1950 to 1970, when he retired.

Joseph J. Seregny

DETROIT.—Joseph J. Seregny, 55, former advertising manager for Lincoln-Mercury and executive vice president of Young & Rubicam, Inc., died Aug. 16. Mr. Seregny was a consultant who established a Detroit office for Benton & Bowles recently. He was a past president of the Detroit Advertising Assn. and a former vice president of the Adcraft Club of Detroit.

25 years

Frank Raduenz, right, Stillwater Motor Co., Stillwater, Minn., receives a tray commemorating 25 years as a Buick dealer. Presenting the award is J. E. Pirtle, Buick zone manager.

Chicago auction slates sale of collector cars

CHICAGO. — The Greater Chicago Auto Auction will hold its fifth annual collector car auction, show and swap meet Aug. 27-28.

The event will feature 400 cars—classics, antiques, special interest vehicles, trucks, sports cars and muscle cars. Cars in every price category will be available, according to auction officials.

Spectators will see a cross-section of automobiles, including a 1929 Pierce Arrow, various Model Ts and Model As, Corvettes, Mustangs and Thunderbirds and a large collection of '57 Chevrolet convertibles.

The auction will be held at Greater Chicago Auto Auction site, 12055 S. Cicero, Chicago, and will begin at 10 a.m. Aug. 27 and Aug. 28.

Canadian output up 9 pct. for year to date

Last week's Canadian car production climbed 26.06 percent above the previous week's total, but was off 20.82 percent from the year-ago mark.

The car makers targeted 11,274 units last week, up from 8,944 the week before and down from 14,238 in the year-ago period.

So far this year, 620,087 cars have been completed in Canada, up 9.76 percent from 564,988 built in the comparable 1982 period.

Last week, truck production fell 8.00 percent as Ford closed its Oakville truck facility because of a shortage of C-6 automatic transmissions. There were 6,812 units scheduled, down from 7,404 built in the prior week and down 8.16 percent from 7,417 assembled in the year ago week.

Year - to - date, 321,448 trucks have been built, down 2.83 percent from 330,776 at this time in 1982.

General Motors' Oshawa Plant No. 1 is scheduled to return to work today (Aug. 22), after being closed for two weeks.

Ford's St. Thomas assembly point is also scheduled to open today after being down for two weeks to begin tooling changes to add production of the full-size Crown Victoria and Grand Marquis to the Escort/Lynx subcompact cars already built there. Final changeover will be completed when St. Thomas closes again from Sept. 12 to Oct. 10.

Volvo's Halifax plant was back at work last week after a three-week vacation.

Truck production holds steady at 37,419 for week

At 37,419, last week's estimated domestic truck production was down 39 units from the previous week's total of 37,458, but up 14.07 percent from 32,804 assembled in the year-ago week.

Year-to-date, the makers have built 1,413,118 units, up 9.29 percent over the 1,293,012 completed in the 1982 period.

Three Ford Motor Co. facilities were down last week because of a shortage of C-6 automatic transmissions. The shuttered plants were Kansas City, Norfolk and Twin Cities.

General Motors' Lordstown van plant reopened last week after being closed for model changeover.

No overtime was reported.

59th year—$40 per year, $1.00 per copy

Pinch may continue through December, dealers say

Shortages trimming sales

By Kathleen Hamilton
Financial Editor

Shortages of new cars are depressing sales, promising to keep sales low through at least September and probably through December, dealers told AUTOMOTIVE NEWS.

Almost without exception, dealers polled by telephone last week reported shortages that ranged from low or no inventory across one or two lines to severe shortages across their entire lineup.

Big cars, luxury cars, performance cars and vans were cited most often as being in short supply.

Most dealers said they are losing sales because of low inventories or long waiting periods, especially for Japanese cars. Efforts to get customers to place orders are reported only mildly successful in most cases.

Domestic-car dealers are beginning to get some relief as 1984 models are arriving with invoices and presell authorization.

Not surprisingly, it is the import-car dealers who are looking for the leanest September: With official introduction dates near Jan. 1, most aren't expecting shipments until October or November, when their 1984 models will arrive.

Jones Toyota-Volvo, Little Rock, Ark., is a study in shortages: Volvos are "always short" at this time of year, and sales people are able to take some orders; Toyotas are on a 30-to-45-day backlog.

What does a sales staff do with no cars to sell?

"Go on vacation," Sales Manager Ken Rich said.

• Forty-five days is a short wait compared with some Japanese imports. At Colonial Ford and Honda of Danbury (Conn.), the wait for Hondas is at least eight weeks, often 30 weeks and sometimes as long as eight months for a new Prelude, said Jim Johnson, Ford sales manager.

There, as at apparently every other Ford dealership in the U.S., the Crown Victoria is in short supply. Vans, high-performance Mustangs, Broncos, Bronco IIs and pickups were among the other shortages listed by Ford dealers.

In some respects, though, Ford Motor dealers recognize they're better off than their competitors. Because of staggered introductions, they have Cougars, Thunderbirds, Tempos and Topazes to sell—the last two particularly important because they are volume cars that have been supported by heavy introductory advertising.

But there hasn't been an overabundance even of these.

"Since we introduced the Tempo, there's never been more than three in inventory until last week, when we got seven or eight," said Cecil Phipps, new-car manager at Fred Jones Ford, Oklahoma City.

• That same store had 338 new cars in inventory at this time last year and only 38 last week. It is preparing for its lowest carryover inventory ever.

Phipps said the dealership is swapping with other Ford dealers in the state to try to keep its customers.

He pointed to one silver lining: "It doesn't take long to make your mind up when you have two or three cars to choose from," and his salespeople can say with honesty that a car probably won't be around if the customer takes too long to decide.

Phipps' rather sunny attitude on the shortage "problem" was shared by many dealers.

"It's better than the other way around," said Jim Nevergold, general manager of Red McCombs Ford-Mazda, San Antonio.

There are no floorplanning costs without inventory, after all. And there is some comfort in knowing that virtually everyone is in a similar position. Be-

GM price hike is $232; above '83; below '82

By John K. Teahen Jr.
Managing Editor

General Motors' '84 price deliberations produced a result that wasn't quite so good as last year's, but it was infinitely better than what happened two years ago.

The corporation last week announced an increase averaging $232, or 2 percent, for the average equipped car. That compares with a bump of $212 when the '83s were priced last summer.

Two years ago, the boost was a staggering $617. Many observers feel that that hike buried the '82 model year before it even began.

It's a commentary of some sort on today's domestic auto prices that a 2 percent raise can amount to $232.

The price of an average-equipped GM car for '84 is $11,619. The figure for the end of the '83 model year is estimated at $11,387.

The $232 consists of $180 on the base vehicle and $52 on optional equipment.

GM said it has made no changes in dealer discounts for the '84 model year, and there have been no changes in destination charges.

Along with the price announcement, GM gave its dealers the OK to pre-sell the '84s before the Sept. 22 announcement day. Dealers can deliver them as soon as they receive invoices, price stickers and EPA stickers.

• GM didn't price the new Pontiac Fiero sports coupe or the new front-wheel-drive C-cars (Buick Electra, Oldsmobile 98 and Cadillac deVille and Brougham). The Fiero will be tagged before its Sept. 22 intro-

breaking news

Ford buying into robot vision firm

DEARBORN. — Ford Motor Co. today (Aug. 29) is expected to announce acquisition of an interest in Synthetic Vision Systems, Inc. (SVS), a new, Ann Arbor-based machine vision system company. Machine vision gives what amounts to eyesight to robots. Ford will use an SVS-developed Cytocomputer system in inspecting electronics. It also will sell it under license. The Cytocomputer, described as the heart of an advanced sensing and image processing system, was developed and patented by the Environmental Research Institute of Michigan (ERIM), a not-for-profit R&D unit.

Buick eyes model-year sales record

FLINT.—Buick anticipates that, with its present rate of travel, it can sell 810,000 cars in the '83 model year—which would be a record, topping the previous high mark of 755,000 set in '79. The 810,000 sales would give Buick a 9.4-percent share of the market.

Chrysler lifts lid on '84s

Sporty Chrysler

Chrysler Laser, a high-tech offering, comes to market with crisp styling, two-plus-two seating and sport suspension. Standard equipment includes an all-electronic instrument cluster and fuel injection. Story on Page 18.

Performance machine

Chrysler Corp.'s performance leaders for 1984 are the Dodge Daytona models. They boast such goodies as a multipoint electronic fuel injection, turbocharging and close-ratio five-speed transmission. The Daytona goes on sale Sept. 29. Story on Page 44.

Colt Vista for '84

The Colt Vista, a seven-passenger wagon, will be offered by Dodge and Plymouth dealers in the '84 model year. Wheelbase is 103.3 inches, overall length is 174.6 inches, and the Vista is powered by a 2.0-liter four-cylinder engine. It is made by Mitsubishi and is called the Chariot in Japan. Story on Page 20.

Conquest in; Sapporo, Challenger out

The Conquest, a turbocharged sport coupe, replaces the Dodge Challenger and Plymouth Sapporo for '84. It is a version of the Starion, introduced last year by Mitsubishi's other U. S. distributor. Chrysler will position the Conquest against the Nissan 300-ZX, the Toyota Supra and the Mazda RX-7. Story on Page 20.

Sierra and Telstar coming

Ford going overseas to bolster U. S. lineup

By Ralph Gray
and Jesse Snyder
Crain News Service

DETROIT. — Ford Motor Co. is set to reap the U. S. marketing fruit of its overseas operations. At least two new cars will cross borders to jazz up domestic lineups.

They are the Sierra XR4 from Ford of Europe and a version of the Australian Telstar, which is to be reskinned for the U. S. and made in Mexico.

The European Sierra will carry the XR4 designation in its as yet unselected name. It will be marketed by Lincoln-Mercury in model year 1985—about a year from now—as a separate brand from the Lincoln and Mercury labels.

Telstar is an offspring of the Ford-Toyo Kogyo marriage in Australia. Ford owns 25 percent of TK and nowhere is the relationship more meaningful than Down Under. The Telstar is actually the Mazda 626. Mazda is the TK brand name.

But the Telstar won't look like the rather boxy subcompact 626. New sheet metal will enable it to step in for the U. S.-made Mercury Capri—a rear-wheel-drive twin of the Ford Mustang.

• The 626-Telstar-Capri is front-wheel drive, with a five-speed transmission and other goodies like rack-and-pinion steering and four-wheel independent suspension.

Sierra will be a federalized version of the existing coupe with twin rear spoilers and a 2.3-liter turbocharged four-cylinder engine that is used in some existing Ford products.

While the Telstar is a good example of the kind of manufacturing economies internationalization brings, the Sierra epitomizes marketing benefits.

Telstar gives Ford a slick new sporty car entry for the cost of some sheet metal that can be bent into a snazzy coupe.

Sierra brings the whole weight of German technology and mystique to the Ford lineup at a time when Eurosedans are gaining favor for their simple styling and good road manners.

• While other U. S. manufacturers cobble up Euro versions of their sedans, Ford is able to bring out the real thing.

"There are those people who just won't buy anything but an European import," one Ford executive said. "This will be a Porsche 944 with a backseat."

That's important because technically the Sierra will be replacing the LN7 in the L-M lineup. The LN7 has been dropped this year because its two-seater design didn't catch on. The twin Ford EXP is hanging on, principally, some say, because Ford had the parts on hand.

Ford has the cars on hand in its overseas operations, where the company earned $100 million in the first quarter of 1983. That was $104 million less than the year-ago period, yet Ford's car share in Europe was a record 13.8 percent to lead all makers there. Sierra was the best-selling car line in the United Kingdom in March.

Just as importantly, Ford now has products that are compatible worldwide thanks to downsizing of cars and the new aerodynamic look being adapted from Europe for the U. S. That means if Ford has a vehicle overseas, it fits a lot easier with U. S. tastes.

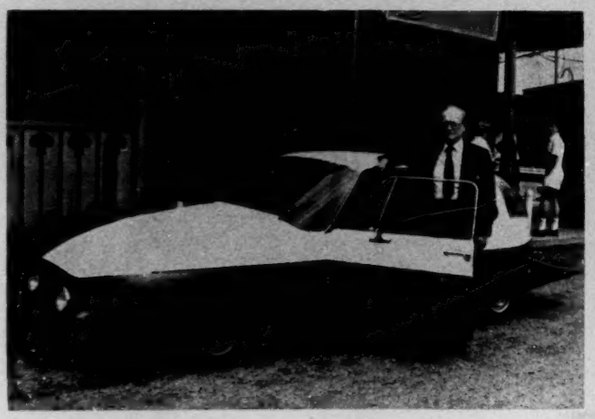
Ford has imported cars before like Fiesta, the English Anglia and the early Capris but that was simply to plug a hole in the market. The Sierra is designed to be around for a long time, Ford sources said.

The 626 variants help Ford politically in Mexico, which has a local-content law. By making the car there, Ford earns export credits against imports. The 2.3-liter engine is also made in Mexico and is used in the compact Tempo-Topaz duo and is scheduled for installation in the future front-wheel drive replacements for the full-sized Ford and Mercury models.

Officially, Ford hasn't decided to build the 626 in Mexico but insiders believe problems with dollar-peso relations will be solved. It's an attractive spot for Ford in addition to local content—labor is cheaper.

It's understood that Ford plans to hold the U. S. Sierra price to around $14,000 to broaden its appeal although the trend for Euro sporty cars and others is for even higher price tags. The 626-Telstar sells in Australia for from $8,235 (U.S.) to $12,093.

On the domestic side, there is rejoicing because engineers managed to increase the subcompact Escort-Lynx city MPG to 36 and 33 for 1984. The competition's ads have been taking whacks at Escort fuel economy.



Fuel-economy challenger

James G. Sawyer, president of Ronal Research Corp., Fraser, Mich., was dissatisfied with the fuel economy of conventional cars. It provided a challenge to the engineer who set about to build this sleek job. Leslie Viland, of Detroit Testing Laboratory, ran the car and got 172 MPG from its one-cylinder, 14 HP diesel engine at speeds close to those in the federal highway test procedure.

'Willing to gamble everything' on them, Cappy says

AMC's goal: More new products

By Mary Beth Mayer
Staff Writer

American Motors has adopted a new product philosophy and is "willing to gamble everything" on a steady stream of new products, according to Joseph E. Cappy, vice president of AMC's marketing group.

"We are trying to compete with all of the biggies," Cappy said at a preview of the company's new line of Jeeps and Renault Encore hatchbacks.

"Our partnership with Renault gives us clout because we can bring vehicles on stream much quicker and be more aggressive."

Cappy said that one of the causes of AMC's 13 consecutive quarterly losses has been an expenditure of $890 million on new products over the last three years. The next three years will also see a substantial investment in that area, he said, as the company continues to have new entries in the volume segments of the market.

The 1984 Cherokee and Wagoneer are the first totally new vehicles introduced by Jeep in 20 years.

"In the past, American Motors would bring out a product and then not change it for 20 years," Cappy said. "You can't compete in today's automobile industry with that kind of marketing plan.

"You have to have competitive products. They have to be state-of-the-art. You have to continue to make improvements on the ones you have, plus continue to bring out new ones.

"That's our strategy and that's the reason we have made a maximum effort in investing in new products," he said.

• Sales for the two Jeep lines are expected to total 40,000 in the first year. Of those sales, Cappy said, Wagoneers should account for 40 percent, and Cherokees, 60 percent.

As for the Encore, the second entry into the subcompact market for the AMC-Renault partnership, Cappy estimated first-year sales would be about 70,000. Second-year Alliance sales are targeted at 130,000.

On AMC's relationship with Renault, Cappy said, "You feel like a little kid in a candy store with a pocket full of change. You see all of the goodies that they have on the shelf and you've got your choice on deciding what, if anything, you're interested in bringing in."

Cappy said that by Oct. 3, the Kenosha (Wis.) assembly facility will be building about 1,100 units a day with a split of about 60 percent Alliance and 40 percent Encore.

"But, of course, we're ready to react to whichever way the market indicates," he said.

"We basically have rehired every single employe that was on layoff (from the Kenosha plant), plus we have hired about 700 or 800 additional people," he said.

"Once we go into a two-shift plan in Toledo in the middle of October, we should have pretty well called back everybody in Toledo. We're probably the only company that's put everybody back to work."

When asked about future product plans, Cappy said that AMC is strong in the four-wheel-drive market but it does not have a compact pickup truck. He said that the competition has taken a compact pickup and made it into a 4WD vehicle.

"There's nothing to say we couldn't do that in reverse," he said.

Prospects appear dim for U.S. 'lemon law'

WASHINGTON. — A federal "lemon law" designed to protect consumers from cars with recurring mechanical problems may pick up steam next year, but the bill's outlook is dim for the 97th Congress.

Early this month, Rep. Tom Lantos, California Democrat, introduced legislation calling for repair or replacement of a defective automobile by the manufacturer if the problem occurs within two years or 18,000 miles of purchase.

Under the proposed law the consumer may petition for a new car through the manufacturer's arbitration program after the car maker has made four unsuccessful attempts to repair a specific defect or after the car has been out of service for 30 days.

The bill is essentially the same as those passed in 15 states already, but Lantos claims Congress should provide a national guarantee to car owners that is "uniform and unambiguous."

• However, the bill will probably not make much headway this year due to its late introduction, auto industry opposition and an administration unwilling to preempt state laws.

A similar measure failed to even pass the committee stage when pushed by former Texas Democrat Rep. Bob Eckhardt in 1979. But with the popularity and variety of state-passed lemon laws confronting automakers, the car industry could switch its strategy and push for a single federal rule.

AMC seeking to add dealers in California

By Matt DeLorenzo
Los Angeles Reporter

LOS ANGELES. — AMC/Renault is seeking to open more dealer points in California to improve market representation, Jose Dedeurwaerder, American Motors president, said at a press conference here last week.

Dedeurwaerder was on hand to introduce the company's new line of Encore hatchbacks and downsized Jeep Cherokee and Wagoneer four-wheel-drive vehicles to the local media.

According to Dedeurwaerder, the AMC/Renault market penetration in California is lower than in the rest of the country.

As a result, the company is working closely with existing dealers to improve quality and is looking to re-establish points that have been closed over the years.

Although the company is rebuilding its dealer network nationwide, particular attention is going to be paid to this state, he said. "We will open more stores as a percentage (of the total effort) in California than anywhere else," Dedeurwaerder said.

He noted that the addition of the Encore will help AMC/Renault cover a greater share of the market and may help increase the company's penetration in the import-dominated West Coast.

While the company is projecting 60 percent Alliance, 40 percent Encore nationally, it expects Encore to take more than half the sales of the Alliance/Encore lines in California.

Dedeurwaerder said the Encore will also aid the company in appealing to younger buyers.

Although Alliance is hitting its target group, he said, the demographics of that car's average buyer is a person 35 to 38 years old with an income between $30,000 and $35,000 per year. Dedeurwaerder said the company hopes the new hatchback will attract more buyers in the under-35 bracket.

Anniversary ceremonies start Sept. 16

GM looks at 75 years of progress

DETROIT. — Consistent with its anniversary theme, "Building on 75 Years of Excellence," General Motors this fall will remember its past success and those who contributed to it.

But the primary focus of the celebration, GM said, will be on how even greater success can be achieved in the future.

Ceremonies marking the start of GM's 75th Anniversary celebration will be at noon, Friday, Sept. 16, at the corporation's world headquarters here. Open houses at 136 GM plants and operations in the U. S. and Canada will follow Sept. 17-24. In addition, five "Up With People" casts will tour 50 cities this fall to give some 170 performances for GM employes.

On Sept. 16, AUTOMOTIVE NEWS will publish a special issue commemorating this GM milestone. The GM 75th Anniversary Issue will chronicle the corporation's activities since 1908.

As another part of GM's anniversary celebration, a 224-page pictorial history of the company has been prepared in cooperation with Automobile Quarterly. With 650,000 copies being printed, the book will be sent to all North American employes as well as overseas managers.

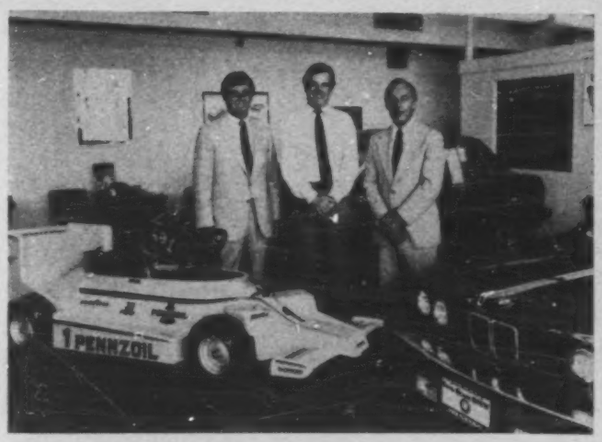
To round out the celebration, GM and its divisions will be the sole sponsors of an eight-hour CBS-TV special in April on the life of George Washington.

In a joint statement, Chairman Roger B. Smith and President F. James McDonald said:

"From its founding on Sept. 16, 1908, as a loose grouping of largely unproven and under-financed firms, GM has grown to become the world's most successful automotive manufacturer. It is entirely fitting that we now look back at the events and the people who contributed to our company's success—and, indeed, its very survival—over 75 years.

"But we would not be true to the legacy that has been left us if we looked only backward at this time. The future is where we must make our marks, and as we celebrate the past, we will also be rededicating ourselves to the achievement of excellence in the years ahead, so that we can continue to see this great company grow and prosper around the globe."

In an article looking ahead to GM's 100th Anniversary in 2008, Smith left no doubt that he is confident GM will increase its success. He said that sometime in the mid-'90s, North American new-car and truck sales will reach 20 million for the first time, while worldwide car and truck sales will reach 60 million, with GM strengthening its position as the No. 1 producer in the world.



Autrey wins mini-racer

Bob Autrey, center, owner of Long Beach BMW, won a mini version of the Pennzoil-Penske Indy Car at the Southern California Motor Car Dealers Assn. Business Conference in Palm Springs. Presenting the 3-HP vehicle to Autrey are Pennzoil's Jim Hayes, left, Los Angeles branch manager, and Gene Johnson, Los Angeles division manager.

PPG, auto glass supplier, marks 100th anniversary

PITTSBURGH. — PPG Industries celebrated its centennial last Wednesday (Aug. 24).

The firm, originally named Pittsburgh Plate Glass Co., became one of the nation's first commercially successful makers of polished plate glass.

Today, the company, called PPG since 1968, is a supplier of original equipment automotive glass, consumer paints and chemicals.

However, in 1883, an uncertain time to form a new major manufacturing concern, the company's role in industrial America was yet to be seen.

John B. Ford produced the first American polished plate glass in commercial quantities in 1867, PPG said, but he was unable to make this a lasting business success. In 1881, he found backers and New York City Plate Glass Co. was incorporated.

It became apparent that it would be more efficient to operate the business as a Pennsylvania corporation based in the Pittsburgh area. New investors were found there, Pittsburgh Plate Glass was incorporated and New York City Plate Glass was dissolved.

Within 12 years, the company was the largest glass firm in the U.S., having built or acquired nine plants.

At the turn of the century, Pittsburgh Plate Glass entered the chemical and paint businesses.

Later, the company developed new technology that made the plate glass process more efficient and provided a new process for making thinner window glass by the sheet process. It also developed safety glass products for automobiles and buildings.

Today, PPG makes a wide range of glass, coating, chemical and fiberglass products at 90 locations worldwide—57 of which are in the U.S.

The company has about 37,000 employes worldwide and had sales of $3.3 billion in 1982, ranking the company 118th on the Fortune 500 list of American industrial firms, PPG said.

As PPG marks its centennial, it is moving into new world headquarters here, half a block from the site of the company's 1883 office.

NHTSA permits more ways of marking convex mirrors

WASHINGTON. — NHTSA will permit additional methods of marking right-hand convex mirrors permanently, but it will not permit their use without warning because of American drivers' inexperience with the convex surface which affects distance perception.

The changes in Safety Standard 111 are effective immediately.

Currently, the convex outside mirror on the passenger side has "indelibly etched" on it: "Objects in Mirror Are Closer Than They Appear." In addition, the maximum allowable curvature is specified.

Toyota petitioned NHTSA to allow other methods of permanent warning, such as sandblasting or glass-based ink for the back side of the mirror glass, to ease the compliance burden of different mirrors for different markets.

NHTSA agreed, but noted that exterior-surface painting or using a plastic decal, either of which could be removed or become illegible, would not be acceptable.

Volkswagen of America wanted both the labeling and the maximum radius requirements to be deleted. The curvature mandate, said VWoA, is in effect a trade barrier since there is no maximum in Europe. Moreover, the large-radius convex mirrors closely resemble plane mirrors and therefore present no safety concerns, VWoA said.

NHTSA rejected VWoA's arguments on grounds of American drivers' inexperience with convex mirrors.

Tidewater dealer group elects Compton president

NORFOLK. — John C. Compton Jr., Green Gifford Motor Corp. (Chrysler-Plymouth), has been elected president of the Tidewater Automobile Dealers Assn. He succeeds Bob Roughton Jr., Roughton Pontiac.

Other new officers are Buster Perry, Perry Buick Co., vice president; Bill Sheppard, Greenbriar Chrysler-Plymouth-AMC, secretary, and Bill Thompson, treasurer. The association includes dealers in the Eastern Virginia cities of Norfolk, Portsmouth, Virginia Beach and Chesapeake.

Can a car built in Britain be 40 pct. Japanese?

TOKYO. — The Ministry of International Trade & Industry is concerned over French moves to restrict imports of the Triumph Acclaim, according to the Japan Economic Journal.

The Acclaim is produced jointly in Britain by BL, Ltd., and Honda Motor Co. It was certified last year as a European car by the EEC.

France reportedly will view 40 percent of the Acclaim as Japanese-made and will place it within the 3-percent market ceiling it applies to Japanese imports.

Should the French move be authorized, MITI fears that similar industrial cooperation projects in Europe will be endangered.

MITI, after conferring with Honda and exploring the French situation through diplomatic channels, may lodge a formal protest with the French Government.

TV spending by auto leaders rises 16 pct. for first half

By Joseph Bohn
Marketing Editor

TV ad spending by nine leading automotive firms increased 16.1 percent in the first half of 1983, with the increases coming mostly from network spending.

Ford Motor Co., because of heavy new product introductions, outspent General Motors, according to Broadcast Advertisers Reports data compiled by the Television Advertising Bureau.

As a group, the auto companies spent $415,872,700 to advertise in TV compared with $358,068,600 last year.

Network ad outlays were up 23.3 percent, with companies spending $309,450,500 against $251,080,800 in the first half of 1982.

Spot advertising remained flat at $106,422,200 compared with $106,987,800 last year.

Ford Motor outspent GM both in network and spot dollars, a temporary phenomenon, due to the introduction of such cars as Thunderbird/Cougar and Tempo/Topaz.

In total, Ford spent $113,111,400, up 53.5 percent from last year.

GM, on the other hand, spent $91,102,600, compared with $83,845,300 last year.

Among the interesting changes was a sharp increase in network spending by American Motors which, at $27,240,700, more than doubled the $12,388,700 of the first half of 1982.

AMC took some of the money out of spot TV—which dropped to $3,941,500 from $10,356,800—to subsidize the heavy network expenditures.

Ford Motor, American Honda and Nissan Motor all recorded fairly heavy increases in spot TV spending.

In total, Chrysler's TV ad spending dropped to $46,534,700 million from $47,241,100 million. Chrysler, along with Volkswagen and Mazda, were the only three firms to show a significant decrease in overall TV spending.

Full-size cars bring top dollar on used market

ROCHESTER, Wis. — Now is the time to sell full-size cars and receive top dollar for them on the used-car market, according to Runzheimer Reports on Transportation, an industry newsletter.

Based on interviews with used-car professionals at major leasing companies and auto auctions, Runzheimer editors pinpointed today's trends in the used-car market.

The findings included:

1. Full-size cars are receiving premium prices on the used-car market because new and used large cars are scarce and in demand.

2. Front-wheel drive on used domestic cars is making many buyers hesitant.

3. Used domestic diesels are still in a tailspin—some outlets are pulling the diesel engine and dropping in a gasoline engine to get rid of the cars.

4. Accessories continue to enhance used-car value.

Used-car professionals quoted in the report predicted the strong used-car market would last through this fall.

The result: More outsourcing

Low-pay jobs rejected at GM unit

By Marjorie Sorge
Labor Editor

Workers at the General Motors Packard Electric Division in Warren, O., have rejected a controversial contract which would have added 200 low-paying jobs to the operation.

The rejection of that contract will not only eliminate those additional jobs but will result in GM outsourcing certain final assembly work for automotive wiring harnesses to outside suppliers or to GM's Mexican operations.

Members of Local 717 of the International Union of Electrical Workers rejected the new contract by a vote of 5,301 to 2,084 last week.

Had the contract been approved, GM would have been able to hire the 200 new workers for about $6 an hour, $4.50 in wages and $1.50 in benefits. Current Packard workers make about $19 an hour in wages and benefits.

According to Elmer Reese, general manager, Packard's competitors are paying less than $2 an hour for similar work outside the U.S. He said reports show that Packard could be competitive paying $6 an hour and keeping the jobs in Warren, where there is a 17 percent unemployment rate.

The $6 an hour wage plan would have applied only to new employes; those already on the payroll would continue to make the current wages, a Packard spokesman said.

According to Ed Fire, president of the IUE, the contract was defeated because the workers considered it a threat. He said there was a "tremendous fear among the employes that they could be forced to work in the low-wage plant or lose their jobs entirely at Packard and General Motors."

A second reason was that GM has returned to prosperity and the workers felt they had made their sacrifice in the concessions contracts of 1982, he said.

The new concept was called the Final Assembly Option (FAO) which Reese said is "unique in American industrial relations."

• "The Warren package provided for Packard Electric to improve its competitive position," Reese said. "It also provided job opportunities for the people of Warren. It guaranteed that the current workforce in Warren would not be asked to work for lower wages and benefits and most important of all it provided the opportunity for our workers to significantly increase their job security.

"Nowhere in American industry has any workforce that we know of ever been offered such an opportunity, the opportunity to grow into 100 percent job security by working with their union leadership, and their management."

Last year the Packard Warren facility was picked as one of five GM plants which will be used for an experimental lifetime job security program. The program provides lifetime job security for 80 percent of the workforce. There are 9,100 hourly workers at the facility.

Under the package, the higher-paid workers were offered alternatives. They could retire through buyouts or changes in the pension plans. Workers in the protected 80-percent group who chose to retire would be replaced by those in the 20 percent group.

According to Richard K. Huber, director of personnel and public relations, the rejection of the FAO "may also hinder the opportunity for the pilot employment guarantee project to be extended to the Warren workforce beyond the September, 1984, expiration date."

Fire said he sees no problem with the pilot project even though the contract was rejected. He said he believes there is a record of cooperation between the local union and management which will continue.

Sales continue to advance with 161,000 in mid-month

By Jenny L. King
Staff Writer

Domestic new-car sales continued their climb out of the 3½-year recession with a 21.72-percent increase for the mid-August period.

It was the ninth consecutive reporting period in which sales improved over year-ago levels and the 19th improved period out of 23 for the calendar year.

Dealers retailed 161,104 new domestics Aug 11-20, up 21.72 percent from 132,356 in 1982. This year's total, however, fell short of 1981's 204,678 and the 170,765 reported in 1980. Record for the period was 242,865, set in 1979.

Year-to-date sales of 4,251,683 were up 17.77 percent from 3,610,221 in 1982.

Annualized sales for 1983 based on the Aug. 11-20 performance were 6,117,000. The mid-August daily-selling rate averaged 17,900, up 21.72 percent from 14,706 the preceding year. There were nine selling days this year and last.

General Motors' mid-month sales of 96,720 were up 18.53 percent from 81,597 last year. Ford Motor Co. reported sales of 36,769 new cars, up 23.65 percent from 29,736. Chrysler Corp. was up 19.15 percent, to 19,174 from 16,092. American Motors reported an estimated sales total of 4,300 units, up 72.00 percent from its year-ago 2,500.

Volkswagen again slipped below its 1982 mark, down 15.71 percent, to 2,049 from 2,431. Honda topped VW with 1983 sales of 2,092 in mid-August.

• GM's share of the domestic market was 60.04 percent, down from 61.65 percent last year. Ford sales accounted for 22.82 percent, up from 22.46 percent. Chrysler earned 11.90 percent, down from 12.16 percent.

AMC climbed to 2.67 percent from 1.89 percent of the market. VW had 1.27 percent, down from 1.84 percent, and Honda won the remaining 1.30 percent of the current mid-month market, with no sales and no share a year earlier.

Of the Chrysler Corp. makes, three were up with Plymouth missing its year-ago sales level by 5.16 percent. Chrysler was up 57.88 percent, Dodge was up 15.60 percent, and sales of remaining Imperials jumped 76.92 percent, to 46 units from 26 a year earlier.

At Ford Motor Co., Ford was up 26.07 percent, Mercury was up 9.84 percent and Lincoln was up 69.37 percent.

In the GM family, Buick was up 35.04 percent, Cadillac was up 7.05 percent, Oldsmobile was up 28.66 percent, Chevrolet was up 0.45 percent and Pontiac was up 33.63 percent.

AMC products dropped 64.00 percent in mid-August, VW Rabbits were down 15.71 percent, and Renault Alliance and Honda Accord had no year-ago sales for comparison purposes.

News roundup

MITI's Uno expected to visit U. S.

TOKYO. — International Trade and Industry Minister Sosuke Uno probably will visit the U. S. this fall after a quadrilateral trade conference in Canada, ministry officials said. Auto exports from Japan to the U. S. are expected to be a key issue. Uno's recent remark that the three-year auto export restraint would not be extended caused strong reaction in the U. S. Uno said later there is plenty of time for both sides to discuss the issue before next March, when the current export lid expires.

Lotus approves purchases of its shares

NORWICH, England.—At an extraordinary meeting following Lotus' annual meeting here, the purchases of Lotus shares by British Car Auctions and Toyota Motor Corp. was approved. Kiyoshi Matsumoto, a senior managing director of Toyota, joined the Lotus board.

Workers oppose Nissan move into Britain

TOKYO.—Nissan Motor Co.'s labor union has urged management to call off a long-stalled plan to build an assembly plant in Britain. The union claimed the multimillion-dollar project is highly risky and could threaten the jobs of its member workers. Union leaders said a Nissan plant in Britain would operate at a loss for a long period. Nissan declined comment on the union's written presentation.

Delaware asks early repayment from Chrysler

DOVER, Del.—Noting Chrysler Corp.'s improved financial position, the General Assembly has asked Chrysler to set a date for early repayment of $5 million the state loaned Chrysler in 1980. Chrysler has been paying 15.5 percent annual interest and is scheduled to begin principal payments in semi-annual installments of $227,000 in 1984. The state wants Chrysler to set a date for early lump-sum repayment and it wants the date announced before Sept. 19. A Chrysler spokesman said the request is "under consideration."

Chinese tires on way to U. S.

CITY OF INDUSTRY, Calif.—Mainland China plans to ship the first of possibly several hundred thousand passenger-car tires to the U. S. shortly. Topac International Trading Co. made an agreement with China National Chemicals Import & Export Corp. to sell 5,284 "Warrior" brand steel-belted radials and 5,000 "Warrior" snow tires in the U. S. Topac said it anticipated importing "at least several hundred thousand" Chinese tires.

Chrysler beefs up car production

HIGHLAND PARK, Mich.—Clarifying a report that appeared in the Aug. 22 issue of Automotive News, Chrysler Corp. said it will produce 50,000 more 1984-model cars from the start of the model year through Oct. 31 than the number of '83 model cars which it assembled in the same year-ago period. In October alone, Chrysler plans to build 102,000 cars in the U. S.—31,000 more than it completed during that month last year in the U. S. and Canada.

Nissan prunes Pulsar lineup

CARSON, Calif.—Nissan's Pulsar hatchback, introduced last fall as a replacement for the Datsun 310, is being dropped from the line for 1984, according to company officials. The Pulsar NX coupe, which accounts for 80 percent of the series' sales, will continue to be sold.

AMC plans new car for 1985 introduction

CHICAGO. — American Motors will build a "derivative vehicle" of the Renault Alliance and Encore at its Kenosha plant next spring or summer for a fall 1985 introduction, Chairman Paul Tippett told a press conference in Chicago. The vehicle will be a total AMC production, he said.

Chrysler Engineering Institute revived

HIGHLAND PARK, Mich.—Following a three-year hiatus, Chrysler's Institute of Engineering is back in the business of helping engineering school graduates earn their masters' degrees through its work-study program. Ten new students have spent the summer in hands-on classes learning automotive repairs at the MoTech facility in Livonia. This fall they begin classroom studies at local universities and are employed by Chrysler simultaneously. The Institute was temporarily dropped in 1980 when Chrysler was in severe financial difficulties.

FBI pursues $17-million mystery

DeLorean woes grow with lawsuits, probe

By Edward Lapham
Senior Editor

DETROIT. — Former auto maker John Z. DeLorean's problems multiplied last week as the result of new lawsuits and a mounting criminal investigation by the FBI.

The U. S. Attorney's office here last week continued to process the necessary paper work to impanel a grand jury and launch the federal task force headed by Assistant U. S. Attorney Martin Reisig.

The FBI also stepped up its portion of the investigation, which currently is focusing on the mystery of the $17.65 million which disappeared from the DeLorean sports-car project in 1978. The FBI is trying to build a case based on "the interstate transport of stolen money," AUTOMOTIVE NEWS sources said.

Meanwhile in federal court in Miami, a group of former investors in the ill-fated DeLorean project filed a $396-million class-action lawsuit against DeLorean, his bankrupt car company, New York investment banker Oppenheimer & Co. and several Oppenheimer officials.

The suit charged the defendants made several misrepresentations in order to bilk the investors of more than $18 million in 1978.

The investors, who formed the DeLorean Research Limited Partnership, were assembled by Oppenheimer in 1978.

The suit, filed by Miami law firm Sams, Gerstein, Ward, Newman & Beckham, claims the money raised by the partnership was supposed to have been used for research and development but instead was paid to GPD Services, Inc., a Panamanian-registered Swiss company.

"Sometime in the fall of 1978, John Z. DeLorean and other persons as yet unknown converted the DRLP proceeds for their own personal use, benefit and gain by causing said proceeds to be paid to GPD Services, Inc., and then to themselves, under the false pretext that the DRLP proceeds would be void by GPD Services, Inc., for its DMC-12," the suit said.

Oppenheimer began soliciting investors with a private placement memorandum in early 1978 when it looked like the DeLorean sports-car project would be located in Puerto Rico.

It was later amended when DeLorean was to close a deal to take his factory to the Republic of Ireland and amended again when he finally decided to accept a deal to build his plant in Northern Ireland.

The partnership raised $18.7 million, $12.5 million of which was included in the missing $17.65 million.

The suit charges that subcontracting the development work to Lotus Cars through GPD materially changed the investment risks and that the 132 limited partners who invested $150,000 each should have been informed of the subcontracting deal.

The firm said it now has proxies from 90 of the 132 partners. It has called a Sept. 13 meeting in New York to discuss waiving the client-attorney privilege with Geneva attorney Jacques Wittmer.

This action would allow Wittmer to discuss with U. S. investigators details surrounding the 1978 disappearance of $17.65 million from the DeLorean project. Wittmer represented DRLP and DeLorean Motor Co. in the transactions with GPD.

• In a separate action in federal court in New York last week, the unsecured creditors committee of bankrupt DMC sought and received an order from Judge Mary Johnson Lowe attaching a portion of the proceeds from the planned $4.2-million sale of DeLorean's Manhattan co-op apartment.

The order also restrained DeLorean from selling or mortgaging his Bedminster (N. J.) farm and his Bridgewater (N. J.) property, which he acquired and leased back to DMC.

Earlier, the creditors committee got an order in bankruptcy court in Detroit placing in escrow any receipts from a sale of DeLorean's Utah-based Logan Mfg. Co. The court order last week effectively tied up the remainder of DeLorean's major assets in the U. S.

Two weeks ago one creditor, Audio Systems, Inc., received an order attaching up to $1.3 million of any receipts from the sale of the Manhattan apartment. DeLorean was forced to pledge his Pauma Valley (Calif.) ranch as collateral for his bail in the Los Angeles federal drug-trafficking case.

Victory L-M opens

COLUMBUS, Ga.—Barney A. Smith Jr. and Daniel R. Snow have opened Victory Lincoln-Mercury, Inc., here. Smith also owns Barney A. Smith Lincoln-Mercury, Inc., in Macon, Ga.

DeLorean judge requests data from U. S. agencies

By Matt DeLorenzo
Los Angeles Reporter

LOS ANGELES.—A U. S. District Court judge here issued 51 orders for documents from various government agencies involved in the drug-trafficking case against John Z. DeLorean.

Judge Robert M. Tagasuki wants to inspect the documents from the agencies that include the Drug Enforcement Agency, Central Intelligence Agency, the Pentagon's Defense Intelligence Agency and the National Security Council.

DeLorean's attorneys have filed motions that allege a government conspiracy to entrap and convict their client at the behest of the British Government because DeLorean's Northern Ireland car factory was a political embarrassment.

Assistant U. S. Attorney James M. Walsh, the government's prosecutor, has filed a document with the court asking Tagasuki to reconsider his order.

Walsh told the court that if the government complies with the request, it could push the trial date back perhaps a year because it would take that long to gather the documents the judge wants to see.

DeLorean's trial, which already has been delayed several times, is scheduled for Oct. 4.

• In an unrelated matter, more court documents were released including a DEA report that alleges that DeLorean was at first seeking to invest $2 million in a heroin deal and turned to cocaine only after government agents produced a cocaine dealer — William M. Hetrick, who has already pleaded guilty to drug-trafficking charges.

Six U. S. groups team for exhibit at 84 Automechanika

FRANKFURT, West Germany. Six U.S. automotive aftermarket trade associations have banded together to produce an exhibit at Automechanika which will be held here Sept. 11-16, 1984.

The exhibit will be the American Pavilion, and the six groups are operating as the Automotive Products Export Council.

The six associations are the Automotive Parts and Accessories Assn., the Automotive Service Industry Assn., the Hand Tool Institute, the Overseas Automotive Club, the Specialty Equipment Market Assn. and the Truck Body and Equipment Assn.

Their effort will be managed by Hall-Erickson, Inc. Hub Ericksen Jr. said the American Pavilion will be an "actual show within a show" produced by the six associations which are working together for the benefit of the entire industry.

"To exhibit," Erickson said, "it is not necessary for a manufacturer to be a member of one of the six associations. Each exhibitor will receive equal treatment."

obituaries

Louis A. Riccio

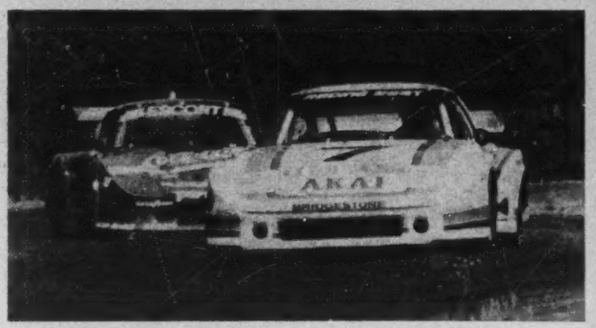
JERSEY CITY. — Louis A. Riccio, owner of Rick's Datsun, died July 26. He had been a new-car and used-car dealer in Jersey City for 51 years and had been a Datsun dealer for 25 years.

Orren (Bud) Hulett

DETROIT.—Orren (Bud) Hulett, 69, owner and president of National Auto Glass Specifications, Inc., since 1952, died Aug. 7. He developed the NAGS numbering system used in auto glass replacement.

G. N. (Jerry) Waddell

SALINA, Kans.—G. N. (Jerry) Waddell, 84, a past president of the Kansas Motor Car Dealers Assn., died Aug. 11. He had retired from his Ford dealership here in 1977. He was a director of the Kansas State Chamber of Commerce and a member of the Governor's Economic Development Committee. He was known as "Mr. Salina" because of his interest in local civic affairs.



Mazda third at Mosport

John Morton and Rick Knoop drove the Racing Beat Mazda RX-7 to victory in the International Motor Sports Assn. GTO class at the Mosport (Canada) 6-hour endurance race. The rotary-powered sports car was the fastest production-based car and finished third overall.

5/50 Honda warranty urged on rust, head gasket issues

WASHINGTON.—The Center for Auto Safety is urging Honda to institute a 5/50 warranty to cover all models through 1980 for head gasket and rust problems with direct notification to all owners.

The center said it is doing this because it is now receiving more complaints against Honda than any other Japanese company even though Nissan and Toyota have sold 30 to 50 percent more vehicles than Honda during the past five years.

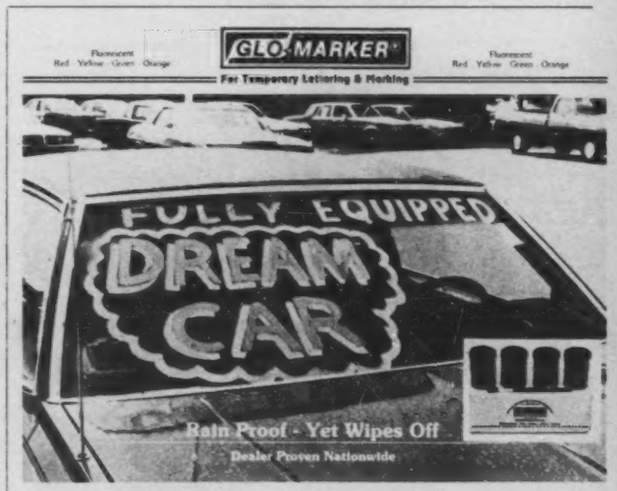
Despite Honda's recall of its '75-'78 models in salt-belt states for premature rust and its recall of '76-'77 models for head gasket failure, the center said, "Honda only removed the symptom, not the disease." It adds that since January, 1982, it has received more than 600 complaints about these continuing problems.

The 395 letters on rust deal both with the '75-'78 models, where some owners claim the company refused to repair their cars, and with 1979 and later models where, according to the safety center, "rust erupts like cancerous sores shortly after the three-year warranty expires."

The center has also received reports of more than 200 complaints of head gasket failure and excess oil consumption.

This "very serious and costly" problem, the center said, can lead to engine failure and "repair bills of $2,000 or more," yet the replacement heads are still the subject of complaints. One letter cited by the center is from a New York woman who has experienced failure of three head gaskets.

Finally, said the center, these problems are compounded because of inadequate service from Honda dealers and this combined with Honda's own failure to continue correcting defects is now putting Honda's reputation in "serious jeopardy."



WANT ATTENTION?
FOR YEAR - PRICE - FEATURES - SPECIALS
GLO-MARKER GIVES IT!
USED CAR LOT - SHOWROOM - FRONT LINE

REMOVABLE - FLUORESCENT
GLO-MARKER is a highly visible, rainproof fluorescent brush on liquid marker you remove with a dry cloth . . . not razor blades! Makes shoe polish, paint and stickers obsolete.

SIMPLE & EFFECTIVE
Easy to apply - Easy to remove
Attractive and Rainproof
Wipes off - No razor blades
Colorful, bright, more readable at a distance
More versatile and less expensive than stickers
Reduces drivers blind spots
Comes Alive! at night under lot lighting
Safe on virtually any smooth non-absorbant surface
Comes in 4 colors to make every car and lot different
GENERATES INTEREST, FLOOR TRAFFIC AND SALES

AFFORDABLE
The GLO MARKER KIT - 3 jars of each color (fluorescent yellow, orange, green and red). This average 90 to 120 day supply gives you all these advantages for approximately 10¢-25¢ a windshield and is the equivalent to $200.00-$400.00 in stick ons.

ORDER DIRECT - IF NOT LOCALLY AVAILABLE

GLO-MARKER BRUSH — FREE WITH ORDER
This special brush allows you to go from color to color with the wipe of a kleenex and clean up is just as easy. Wipe clean - let dry. $3.00 value FREE with each 12 pack kit ordered.

3 GM plants back on the job

Auto output rebounds to 138,621

By Mary Beth Mayer
Staff Writer

The domestic auto makers estimated last week's production at 138,621, a 31.57 percent increase over the previous week's 105,365, and 44.75 percent over 95,772 built in the year-ago period.

So far this year, there have been 4,193,350 cars assembled, up 22.28 percent from 3,429,513 units finished in the year-ago period.

Breakdown for last week's production by company was: General Motors, 59.38 percent; Ford Motor Co., 20.60 percent; Chrysler Corp., 14.10 percent; American Motors, 3.14 percent; Volkswagen of America, 1.70 percent, and Honda, 1.08 percent.

Ford's Dearborn facility was the only plant which was not operating last week. It was closed for inventory adjustment.

Three GM plants returned to work last week after being down for inventory adjustment. The points which were back in action were Detroit, Van Nuys and Willow Run.

GM plants working last Saturday (Aug. 27) were: Fairfax, Flint, Lansing and Pontiac. All but Fairfax worked two shifts.

Canadian car output climbs on gains by GM and Ford

With the return to work of a Ford Motor Co. facility and production acceleration by General Motors, last week's Canadian car output soared 75.49 percent above the previous week's total, but was off 18 percent from the year-ago mark.

The car makers targeted 15,902 units last week, up from 9,062 the week before, and down from 19,391 in the year-ago period.

So far this year, 633,777 cars have been completed in Canada, up 8.66 percent from 583,275 built in the comparable 1982 period.

Last week's truck production was almost double that of the previous week. A GM plant returned to two shifts of production after one month of only one shift, and Ford's truck point was back to work after being closed the week before.

The truck manufacturers scheduled 11,783 units last week, up 84.06 percent from 6,402 the previous week, but down 2.47 percent from 12,081 trucks built in the year-ago period.

Year-to-date, 332,821 trucks have been built, down 2.60 percent from 341,698 at this time in 1982.

GM's Oshawa Plant No. 1 remained down last week and is slated to reopen at the beginning of September. GM's Oshawa truck facility is back to working two shifts, after a month of only one shift of production.

Ford's St. Thomas assembly point opened last week after being down for two weeks to begin tooling changes to add production of the full-size Crown Victoria and Grand Marquis to the Escort/Lynx subcompact cars already built there. Final changeover will be completed when St. Thomas closes again from Sept. 12 to Oct. 10.

Ford's Oakville truck facility returned to work last week after being down for a week because of a shortage of C-6 automatic transmissions.

Chrysler Corp.'s Windsor plant remained closed for retooling. It will begin producing the T-115 van/wagon in October.

American Motors' Brampton point was down last week for inventory adjustment.

Olds glows over outlook for sales of its diesels

LOS ANGELES.—In an effort to make diesels more attractive to California buyers, GM's Oldsmobile Division has cut the certification costs to the consumer to $99 from $215 on its 1984 model cars, Joseph Sanchez, general manager, told a press gathering here.

The costs of bringing diesel-powered cars up to California emission standards is rolled into prices and is not listed separately on window stickers.

For 1984, diesel Oldsmobiles sold in California are equipped with a new electronic emission control system that reduces exhaust emissions while maintaining driveability, Olds said.

A microprocessor monitors a variety of engine and vehicle functions and regulates such tasks as exhaust gas recirculation and torque converter clutch engagement.

The 5.7-liter V-8 diesel will not be available in California in 1984 because of emission standards.

Sanchez, who took over the reins at Oldsmobile last spring, said that if the price differential between gas and diesel power cars is reduced, diesel penetration will increase.

As a result of the five-cent-per-gallon increase in gasoline prices, a wider spread is developing between gasoline and diesel pump prices and that too will have a positive effect on diesel sales, he said.

• "We expect to see an increase in diesel penetration in 1984," he said. Sanchez predicted the number of diesels sold may double during 1984, from approximately 6 to 12 percent of the market.

He added that California has responded quite well to the 4.3-liter V-6 diesel powered Cutlass Ciera and that sales of these vehicles in the state outpaced the national average in the first quarter of 1983. The V-6 diesel is expected to be used in the new front-drive Olds 98, which according to Sanchez, will be introduced in the first quarter of 1984. Availability of the engine in what will be Olds' full-size model will further help diesel penetration in California, he said.

Overall, Oldsmobile has increased California sales from 6.0 to 7.2 percent of the market. Although the increase is the highest for any region in the U. S., according to Sanchez, it is still below the national figure of 11 percent. He said Oldsmobile will be counting on increased sales of its FWD product, such as Cutlass Ciera and Firenza to close the gap.

Truck output up as 3 Ford plants return to work

With three Ford Motor Co. facilities returning to work, last week's estimated domestic truck production rose 23.36 percent over the previous week's total.

Truck makers targeted last week's production at 44,585, up from 36,145 the week before, and 44.34 percent above 30,889 units built in the year-ago week.

Year-to-date, the makers have built 1,456,429 trucks, up 9.57 percent over the 1,329,229 completed in the 1982 period.

The Ford factories resuming production after a week of downtime due to a shortage of C-6 automatic transmissions were Kansas City, Norfolk and Twin Cities.

No overtime was reported.

Optimism high among dealers, NADA reports

WASHINGTON. — Expectations of America's franchised new-car and truck dealers are at their highest levels since NADA began its quarterly surveys of member dealers eight years ago.

The NADA Optimism Index portrays dealers as "exuding optimism" for the remaining months of 1983.

The 1983 second-quarter Optimism Index exceeded the first quarter for the first time since 1980. NADA measured a jump of nearly 80 index points from the first quarter, bringing the index to 176.

As a result of its findings, NADA continues to stand by its 1983 sales prediction of 11.7 million new vehicles (cars and trucks); 1982 vehicle sales registered 10.5 million.

"Not only is the index reflecting current strength of the new and used-car vehicle sales rates, but it indicates a market strength well into 1984," said Jay Ferron, executive director of the NADA Industry Analysis and Dealership Operations Group.

"The market analysis results indicate dealers are interpreting positive statements they hear from buyers and potential buyers."

• According to NADA, franchised new-car and truck dealers displayed "remarkable business acumen" in predicting the turbulent economies of 1981 and 1982.

The indices of those years indicate dealers correctly predicted the sales slump, while industry analysts predicted upturns in the automotive market. Consequently, NADA places great emphasis on the validity of the index in determining the true market.

The current reading stirs hopes that better days lie ahead.

The index is computed from responses to the following question, which is included on every Quarterly Survey:

"On a scale of one to five, with "1" representing substantial decline and "5" substantial improvement, indicate what you expect for the next 12 months in regard to your dealership's total profits before taxes."

The sum of weighted responses "1" and "2" is subtracted from the sum of weighted responses "4" and "5". This number is then added to 100 to give the index value.

The index was as its lowest in 1980. After leveling from the middle of 1980 to early 1982, it moved steadily upwards to reach thi

Suzuki, Isuzu small cars bow in '85

GM will bolster its small-car lineup for the '85 model year by adding two front-drive Japanese-made cars. The Suzuki hatchback, above, codenamed the M-body, will debut in the summer of '84 as an exclusive Chevrolet offering. The minicar rides on a wheelbase of 88 inches, will be about 141 inches long and could weigh under 1,500 pounds. It has a 1-liter three-cylinder engine. Price is expected to be under $5,000. GM will import up to 100,000 units. Both Chevrolet and Pontiac dealers will sell the Isuzu R-body subcompact, available as a two-door hatchback and a four-door sedan (below, as a Chevy). It bows in the fall of '84 and may be priced about $6,000. It will be powered by a 1.5-liter four-cylinder engine. GM will import about 200,000 Isuzus the first year.

Passive restraint delayed for year; more action due

By Helen Kahn
Washington Bureau Chief

WASHINGTON.—Just in the legal nick of time, the Transportation Department suspended for one year the passive restraint standard that had been scheduled to become effective Sept. 1, 1983.

The announcement, made less than 24 hours ahead, was only to "preclude any possibility that manufacturers might be in technical violation of a requirement that, as a practical matter, could not be met."

DOT General Counsel Jim Burnley also announced that a notice of proposed rulemaking would be issued by Oct. 15, but he stressed that although no decision has yet been made on the form the proposed rule would take, action will occur before the end of the one-year suspension.

DOT's total quiescence so far is apparently explainable because of delay in getting the official remand from the District of Columbia Appellate Court through which the U. S. Supreme Court had to funnel the remand it ordered when on June 1 it also ruled that NHTSA's rescission of the standard was arbitrary and capricious.

On Aug. 4, 1982, the Circuit Court suspended the standard from its original effective date for '83 models for a year until 1984 models to allow time for litigation.

But the DOT move in no way indicates what direction the government might take in the future. It could revise the standard, reissue it, or again rescind it for due cause.

But it cannot again use the reasoning that the auto makers were going to use passive belts which buyers would detach, thus making them no more effective than ordinary manual belts. That was the assertion of former NHTSA head Raymond A. Peck when he rescinded the standard on Oct. 29, 1981. That argument was one of the major flaws which led the U. S. Supreme Court to rescind Peck's rescission.

• Precisely what effect this has on General Motors' request for an independent analysis of the cost/benefit ratio for passive restraints and particularly the air-bag system is not clear.

The area is especially murky because of differences among companies in the industry, Ford's desire to sell more than the 5,000-car fleet of driver-only air-bagged cars to the government and perhaps to an even broader segment and some limited use of air-bagged vehicles as options by both Mercedes-Benz and BMW.

GM is urging the government to retain one—"or preferably two" — private consulting firms to advise it on what to do with

Selling at '$49 over' in rural Minnesota

Case study: How to make money, lose friends

By Richard A. Wright
Assistant Managing Editor

LAKE CITY, Minn. — John Peterson Motors sells all five General Motors car lines in this small town on the scenic banks of a wide section of the Mississippi River, but his facility doesn't look much like a dealership.

And other dealers in the Minneapolis-St. Paul and Rochester areas don't think much of John Peterson Motors. Neither, apparently, do Oldsmobile and Cadillac sales people in the zone office and back at headquarters.

After a couple of losing years after taking over the Lake City dealership, Peterson is now turning a profit. And it is doing it in part by taking sales from the Minneapolis-St. Paul area, a little over an hour's drive to the [illegible] an hour to the southwest.

But that's not why the dealers are mad at 28-year-old John Peterson, son of longtime Minneapolis dealer Don Peterson and a third-generation auto man. They don't like him taking sales from their areas, of course, but what particularly incenses them is the way he does it.

There are no cars in Peterson's showroom. It has been divided into sales offices. There are only two cars on his used-car lot. There are five cars outside the dealership waiting to be delivered.

And the most eye-catching thing about the facility is a large sign on the side of the building which the motorist sees on the way in from Minneapolis that says: $49 over factory invoice."

• Peterson became a $49-over dealer March 1 and since that time his business has turned around dramatically. Losses plummeted. After two months on the $49-over approach, he showed a profit.

"It took a while to show a profit because I had to sell off the inventory I had and there were floor-plan costs," he said. "But now, things are going great!"

In July, the dealership posted a net profit of $27,000, more than its loss for last year. Sales have jumped from 15 or 20 a month to around 200 a month.

The factory is pleased with this turnaround, right? Not entirely, Peterson says. "I've lost a lot of sales because cars I've ordered never got built," he said.

Why isn't the factory happy? The answer to that question is more complicated. In fact, a curious split personality in General Motors shows up. Buick builds all the cars Peterson or-

Transmission complexities simplified

New Isuzu automatic based on 5-speed box

By John Hartley
Staff Correspondent

TOKYO. — More details have become available on the new but simple automatic transaxle developed by Isuzu (AUTOMOTIVE NEWS, Aug. 8).

The days of the torque converter appear numbered, for Isuzu's new unit is based entirely on a conventional manual box.

Gone is the torque converter, hydraulic pump, epicyclic gears and complex control valves. Replacing them are a normal clutch and synchromesh gearbox with the addition of an electronic control unit and some actuators to operate the clutch and to shift gears.

Still under wraps, the new five-speed transaxle is due to bow in October when Isuzu makes some minor changes to the Aska, its J-car.

Isuzu engineers decided that the answer to a fuel-efficient automatic was to combine a manual five-speed transaxle with an automatic gearshifting system to match the performance of the "best driver."

It enlisted the aid of Fujitsu, the big computer company, to produce an electronic controller, and Diesel Kiki, a maker of diesel injection equipment, to produce the hydraulic actuators.

• When the driver depresses the accelerator to move off, the controller modulates the flow of oil to the clutch actuator and a smooth take-up is assured. Then, the controller instructs another hydraulic actuator to shift gears as necessary.

This basic concept is not new, as there have been several other attempts, especially in Europe, to produce a transmission of this type.

Most recently, both Automotive Products in the UK, and Porsche in Germany have devised automatic transmissions based on conventional gearboxes. However, both those designs used a pair of clutches to smooth shifts.

Fuji Heavy Industries uses a semi-automatic transmission on its tiny Subaru Rex which is a halfway house to the Isuzu design. It uses an electronically controlled actuator to operate the clutch, the driver being required to change gears manually. This system works very well.

If Isuzu can produce a system that gives really smooth shifts — and this is not easy — then it could be on to a winner. Apart from the controls, the transaxle is exactly the same as the manual unit, so capital investment is minimal.

In addition, GM, which already buys the manual unit for use on its J-cars in Europe and Australia, is also likely to use the unit. Cost is expected to be about the same amount as a normal automatic.

5-year financing introduced by Alabama bank

BIRMINGHAM, Ala. — The Central Bank of the South, seeking to make monthly payments lower, has introduced a five-year financing plan.

The plan is being made available to qualified borrowers who buy a new car with a sticker price of $12,500 or more.

The buyer must make the standard downpayment of 15 to 20 percent. The actual take-out price can be below the $12,500 sticker price.

The plan is being offered at all Central Bank branches throughout the state, according to Jim Price, senior vice president.

One of the features of the plan is that the rate is on an adjustable basis. The rate can be increased or lowered every six months, but the amount of the monthly payments will not vary.

The contract on the five-year basis has a base rate of 12.75 annual percent.

Under this plan a new $10,000 loan financed through Central would require a monthly payment of roughly $226.75.

Compared with the conventional 48-month new car loan at 12.5 percent it would put monthly payments at about $265.80. Monthly payments on a 36-month deal at 13.5 would mean an average monthly payment would be in the range of $339.35.

Prince said the bank is breaking with the traditional shorter-term basis even though it means less collateral value of cars.

"Although Central Bank is concerned with the collateral value, we are more concerned with the credit rating of the individual borrower," he said.

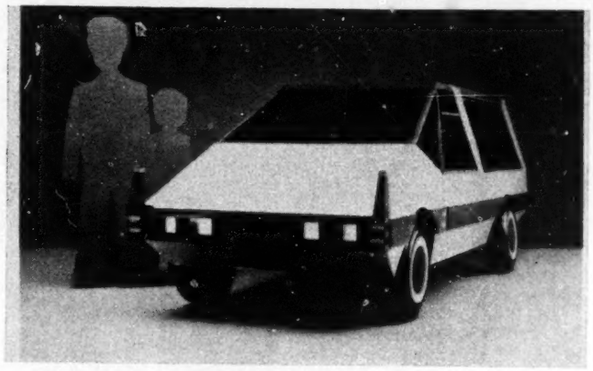
13,800 Corvettes recalled for two underhood fixes

WARREN, Mich. — Chevrolet has recalled 13,800 of its '84 Corvettes to modify two items in the engine compartment.

Power steering pump pulleys will be changed on all of the cars, and a battery cable on 12,000 of them will receive a new plastic insulator.

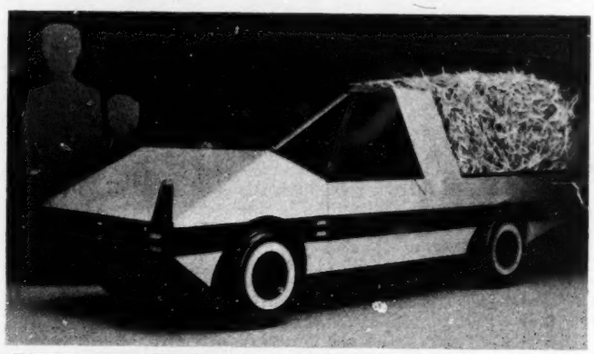
Chevrolet said it has received a few reports of cracked pulleys and battery pulleys with chafed insulation. The division said there have been no reports of accidents or injuries due to either condition.

This is the second Corvette recall since the '84 model was introduced nationally in April. The earlier one, in June, involved 10,000 models which were recalled for replacement of bolts holding front-wheel brake assemblies.



Logicar is convertible

This car converts into a pickup without removing any parts. They fold and telescope, says Danish designer Jakob Jensen. Logicar will be shown at the AUTO-teknik 1983 motor trade fair in Copenhagen, Oct. 13-16. There are no plans for production.



Ford extends warranty on power steering

DEARBORN. — Ford Motor Co. in early October will notify owners of about 900,000 of its 1978 through early 1983 cars of an extended warranty on power rack and pinion steering systems.

The warranty will be for five years or 50,000 miles. It results from cold-weather problems.

Ford said a small percentage of customers with cars with power rack and pinion steering may experience a temporary loss in power assist upon cold start-up.

Premature wear of the inner surface of the steering system's housing causes difficulty in turning the steering wheel, Ford said.

A new seal introduced early in the 1983 model year appears to have taken care of the problem, the company said.

The extended warranty applies to some 1978 through 1983 Fairmont, Mustang, Thunderbird, Granada, LTD, Zephyr, Capri, Cougar, Cougar XR-7, Marquis and Continental models.

Some 600,000 cars in Northern states will be covered and an additional 300,000 cars in Canada will be under the lengthened warranty.

Ford said it can make repairs for about $200 per car using rebuilt parts.

Foreigners control 40 pct. of car market, Eckes says

Factors influencing trade analyzed

By Geoff Sundstrom
Washington Reporter

WASHINGTON. — A strong dollar overseas may be overstated as a competitive advantage to foreign car importers, the chairman of the U. S. International Trade Commission has indicated.

Announcing the findings of a new commission report on exchange rates, ITC Chairman Alfred E. Eckes said last week, "there is often very little correlation between exchange rate fluctuations and bilateral trade balances."

Other factors may be equally important in influencing the sale of U. S. goods abroad and the importation of goods here, Eckes said. These include changes in competitors' prices, product demand, local production and manufacturing costs, the commission's new report suggests.

Eckes, who formerly taught economic history at Ohio State University, said the report indicated there is "some truth" to the belief that high real interest rates and an overvalued dollar are temporary problems.

"However, we should not conclude that when the dollar falls, our trade deficit will vanish," he said. "In fact, there is now reason to question conventional wisdom that exchange rates alone dictate trade flows.

• "Our economists at the commission tell me that each $1 billion change in the trade balance affects 25,000 jobs. Thus, a little math shows an increase in the deficit of $60 billion could mean 1.5 million lost job opportunities for American workers," he said.

Eckes said, "Over the last year there has been a 30-percent increase in imports of motor-vehicle parts and accessories and a 38-percent increase in imports of motor vehicle engines and parts."

He said 40 percent of the domestic car market is now controlled by foreign car builders, where Canadian imports are included.

"A decline in the dollar will undoubtedly provide some relief to beleaguered American industry," he continued, "but a falling dollar will not end the import challenge."

Speaking from personal observations and not on behalf of other commissioners, Eckes told his National Press Club audience, "Many domestic industries have petitioned for duties to offset foreign unfair trade practices. But in some instances I sense what they actually need is not simply a level playing field but temporary shelter from all forms of import competition to restructure and retool."

• A so-called "level playing field," or special taxes and tariffs to offset foreign exchange-rate differences and tax differentials, has been the plea of some American auto industry executives. A week ago, Ford Motor Co. Chairman Philip Caldwell indicated currency dif-

GM names Bagshaw sales chief in Europe

By Richard Feast
European Editor

RUSSELSHEIM, West Germany. — John G. Bagshaw has replaced John O. Grettenberger as General Motors' top salesman in Europe.

The surprise move, effective Sept. 1, sees Bagshaw, 58, move from director, passenger-car operations at Vauxhall Motors in the UK to executive director, sales, service and parts, at Adam Opel in West Germany. The position carries overall responsibility for European coordination.

Grettenberger, 46, is moving to the U. S. to Oldsmobile as director of product, business and strategic planning. He had been at Opel since February, 1980.

The changes occur at a time when GM's standing in the European sales race has never been higher.

It sold a record 662,500 cars in the first half of this year, a market share of 11.5 percent and an increase of a quarter over the same period one year earlier.

Overall, the European passenger-car market was up 5 percent to 5.755 million in the same period.

Bagshaw joined Vauxhall in March, 1981, having previously worked at Pontiac and GM-Holden's. At the time GM's UK market share was 8 percent. Bagshaw said it would double by 1985.

He leaves with GM on 14.5 percent, well ahead of what were considered optimistic forecasts.

Bagshaw is an Australian. He is married and has one daughter. He served in the royal Australian navy and continues a strong love of sailing.

No successor at Vauxhall has so far been named.

Better than Chrysler or GM is the claim

Ford ads accent product quality

By Joseph Bohn
Marketing Editor

If quality is the prize bone each of the domestics are fighting for, then Ford—for '84, at least—seems to have come out top dog.

New ads all claim its industry-wide superiority (36 percent better than Chrysler; 10 percent better than GM) under a "best-built American cars" and "best-built American trucks" tagline.

There's even a separate commercial that talks about quality superiority. It is backed by Rogers Research, a private industry firm, and Product and Consumer Evaluations, Inc., which Ford commissioned separately to back its public claims.

The latter surveyed 14,000 new-car owners six months after their purchase, according to Douglas T. McClure, Ford Division ad manager, in tallying and comparing complaints.

Ford is still fighting for greater purchase consideration. The "best-built" tag is being piggybacked to the carryover "Have you driven a Ford lately?" theme to attract prospects.

Overall, Ford Division's ad budget is about the same as last year's, after inflationary adjustment, with a similar two-thirds TV, one-third magazine ratio.

The magazine list, McClure said, has been trimmed a bit in favor of greater frequencies in remaining publications.

Ford is still negotiating with some major magazines the five-point request it made for '84 in exchange for guaranteeing a whole year's schedule up front. (AUTOMOTIVE NEWS, Aug. 29.)

• Among individual car lines, Escort this fall is being pitched as the world's best-selling car and offering a new diesel with improved mileage numbers.

"World Leader at the tender age of three" is the theme of one set of print ads and TV spots. On TV, the spot plays against Viennese waltz music, the voice-over describes Escort's debut as a first-year sales champ over imports and its climb to the status of best-selling car in the world.

Again, using a waltz background, ads compare Escort to a succession of Japanese models, which it in turn, bests with better ride and suspension (than Nissan Sentra), more passenger room (than Honda Accord), more standard features (than Toyota Tercel) and better mileage, with the new two-liter diesel, (than a Honda 750 motorcycle).

EXP advertising features the new turbo model. It plays up acceleration, bubbleback design and a new instrument panel by punning on the word dash: "New dash (instrument panel) . . . new dash (power) . . . new dash (styling)."

Big news for Mustang is the new SVO model, which is touted in print and TV as "The machine speaks for itself."

Ads talk about the 175-HP turbocharged engine, adjustable gas shocks, special Goodyear tires, dual spoiler, "articulated driving seats," five-speed manual and other performance features.

There is also a humorous convertible commercial. It features a dialog between a young woman and her brother—the youngster finally spouting off a high-tech description of what he likes best about Mustang: "The five-speed with automatic overdrive and fuel-injected 5-liter high output engine."

And, finally, a full-line ad, entitled "decisions, decisions, decisions," brings together Mustang GT, SVO and convertible models, with brief summations of their chief appeal.

• LTD continues to be pitched as a "comfortable, capable" family car: Comfort inside because of the outside capability of such features as gas-filled shocks, struts and stabilizer bar for handling and ride.

LTD Crown Victoria, which has assumed greater importance because of more production capacity added for '84, has the theme "You can still own this much car."

Robert Lansing is the TV spokesman who talks about traditional standard features such as "solid steel frame," V-8 engine, along with electronic fuel injection and automatic overdrive.

The '84 Thunderbird ads continue playing up the "form follows function" theme, expressed with new creative in two commercials.

"The way Thunderbird looks has a great deal to do with the way it drives. The shape of the front helps a driver feel the road, the shape of the doors and mirrors smooths and quiets the ride," says one commercial.

Another invites test-drives by noting "You can't judge the true character" of Thunderbird "without touching one . . . sitting in one . . . driving one."

A Thunderbird Turbo coupe commercial replays a May 17, 1983, handling test among three Turbo Coupes and three BMW 633 CSi models—the Ford "out-handling" BMW in "lap after lap." The theme is "first you join 'em, then you beat 'em."

Tempo ads continue pushing name awareness.

The familiar larger-than-life Tempo loop is back.

One commercial touts handling, performance, aerodynamic design, mileage and other technical features, with the familiar "pick up the Tempo of your life" conclusion.

Another commercial talks aerodynamic design, comparing Tempo's legroom to an Audi 5000 and overall roominess to a Mercedes-Benz 300-D.

Print ads have a headline that talks about Tempo as a "synergy of design and technology" with about nine copy points that cover a full range of design, engineering and technical topics.

J. Walter Thompson, Dearborn, handles Ford Division advertising.

Mustang SVO

The Machine speaks for itself.

Power broker

The Mustang SVO is one of Ford's new models for fall and is part of a greater shift to performance in Ford's marketing strategy. J. Walter Thompson, Detroit, handles the account.

Pontiac for Upperman

CORRY, Pa. — Norman H. Upperman has signed an agreement with Pontiac for Rice-Upperman Pontiac-Buick, Inc., here.

Importer solves company-car problem

Spaced-out at IAL

MONTVALE, N. J. — Question: Can 20 college kids fit into a Volkswagen Beetle?

Answer: With enough beer (or whatever) anything is possible.

Another question: Can five middle-aged executives fit into a two seater sports car?

Answer: Not even with three martinis and Jane Fonda personally leading the workout.

So the executives at Malcolm Bricklin's International Automobile Importers, Inc., sans martinis and unfortunately (for them) Jane Fonda, knew they had a problem. They import only two-seater sports cars and they needed sedans.

According to Anthony Ciminera, senior vice president of IAI, the problem was more than the need for sedans. What does an American company importing Italian cars do to maintain balance?

After searching for the answer, one was on their doorstep. There is only one sedan currently available in the U. S. that one of IAI's coachbuilders designed: The Puegeot 505, by Pininfarina.

Ciminera explained that the senior management of IAI will be driving 505s leased from Puegeot. IAI will lease nine to 12 cars from Peugeot.

But balance was still needed; after all, IAI is a U. S. company. The board of directors of IAI will drive General Motors A-cars, according to Ciminera. He added that 90 percent of these are Chevrolet Celebrity models and the remainder are Pontiac 6000s. All are loaded.

A more serious consideration, he noted, was the company did not want to remove cars from the distribution pipeline for corporate purposes. He added that, eventually, all management will get second cars and they will be either the Pininfarina Spider or the Bertone X 1/9, the cars IAI imports.

—JOHN RUSSELL

Total tops 800,000 for first time in 42 months

June registrations highest since '79

By Jenny L. King
Staff Writer

New-car registrations in the U. S. in June were highest for that month in four years, while topping June, 1982, numbers by a substantial 21.10 percent.

The total was 868,736, marking the first time registrations have passed 800,000 since December, 1979.

According to figures compiled by R. L. Polk & Co., new-car registrations reached 868,738 in June, up 21.10 percent from 717,358 a year earlier, and up 12.14 percent from the 772,842 units recorded in May of this year.

Domestic registrations in June totaled 625,077, up 22.33 percent from 510,985 the preceding year. Domestic registrations in May,

Automotive News analysis of new-car registration based on R. L. Polk & Co. statistical report.

Ford launches methanol test in California

SACRAMENTO. — Gov. George Deukmejian has taken delivery of a 506-car fleet of methanol-powered vehicles from Ford Motor Co.

The 506 cars are part of 587 Ford Escorts built for Ford's methanol vehicle testing program.

Of the 506 cars sent to California, most are being delivered to state and local government agencies under the auspices of the California Energy Commission.

Eighty-one more are designated for other state and municipal governments, private industry, research organizations and utilities.

Celanese Corp. will provide the fuel for the 506-car fleet.

The '83 Escorts have been modified at the factory to operate on a blend of 90 percent methanol (wood alcohol) and 10 percent unleaded gasoline.

"The sale of 587 methanol-fueled Escorts further demonstrates Ford's commitment to leading the transition of the transportation sector toward non-petroleum fuels," Ford said. "We believe this test program is a necessary first step, and we encourage others to join the effort to make this country less reliant on foreign energy supply."

Methanol can be produced from natural gas, gasified coal, or from biomass feedstock.

• "Most independent and objective analyses tend to support methanol as a leading, if not dominant, automotive fuel for the 21st century," Ford said.

"Future availability and price still are somewhat uncertain, but we believe the risk of waiting to introduce methanol vehicles is far greater than starting too early, and we hope this test program will lead to increased use of methanol by the end of this decade."

Methanol contains less energy per gallon than unleaded gasoline, but methanol-burning engines provide higher combustion efficiency.

Over a given distance, a vehicle requires about 70 percent more methanol than gasoline, but operating costs of the two fuels are currently competitive because the retail price of methanol is only about 75 cents per gallon — about 60 percent as much as unleaded gasoline, Ford said.

"When methanol is produced from coal in large volume — probably in the 1990s — we expect vehicle operating costs to be 15 to 25 percent less with methanol than with gasoline," Ford said.

The demonstration Escorts are expected to provide a metro-to-highway fuel economy range of 230 miles, Ford said.

All Escorts in the demonstration fleet will be equipped with Ford's 1.6-liter high-output four-cylinder engine.

However, the engines and fuel system are factory-modified to include such things as: Unique pistons and increased compression ratio; carburetor with higher fuel-flow capacity, nickel-plated to resist corrosion; stainless steel fuel tank and stainless steel fuel line.

More-powerful Corona

Toyota's new, Australian-built Corona has 25 percent more power than its predecessor. A new suspension system provides an improvement in stability and steering accuracy.

Toyota keeps rear drive for new Australian Corona

SYDNEY, Australia. — Toyota has bucked the trend in launching the new Australian-built Corona with conventional rear-wheel drive.

Two of the five locally made cars in the two-liter class—the top-selling Holden Camira and Ford Telstar—have front-wheel drive.

Toyota engineers in Japan said that they studied the advantages and drawbacks of both types of chassis layout before proceeding with conventional engineering for the car.

The engineers said that they have achieved similar interior space to that of a FWD configuration by using a compact engine, allowing them to move the firewall forward. They claim that extensive tests show the new car handles as well as its front-drive competitors but has superior passenger ride and easier maintenance.

Unique to Australia, the all-new Corona has had a two-year development period.

Toyota flew a group of journalists and two Australian-made Coronas to Japan so the cars could be driven on the Yamaha circuit.

The new Corona has 25 percent more power than its predecessor. A new suspension system provides an improvement in stability and steering accuracy.

• Toyota Australia has discontinued using the Holden-made 1.9-liter engine in favor of the imported 2.0-liter overhead-cam unit.

The engine features an electronic ignition system with the coil built into the distributor cap. The engine develops 98 HP at 4,800 RPM, compared with 78 HP at the same speed for the Holden unit. It weighs 21 percent less and uses 10 percent less fuel, Toyota said.

The Corona accelerates from rest to 100 km/h (62.14 MPH) in 13.2 seconds — a 20 percent improvement on the old car.

Recirculating ball steering has given way to a rack and pinion system, with optional power assistance. The power assistance is too light for high-speed motoring on a test track but both systems are well ahead of the old design in steering accuracy and stability.

The Corona is built as a four-door sedan and five-door wagon, both body styles having separate rear seats which fold to enlarge the luggage space.

Buyers have a choice of four- and five-speed manual transmissions and three- or four-speed automatics. The four-speed automatic is the only one of its kind available in an Australian-built car.

Toyota Australia expects to sell 30,000 Coronas during the next 12 months and to double their sales to fleet owners.

The new model is built under the 85 percent local-content rule. Toyota will press more sheet metal panels in Melbourne to balance the use of an imported engine.

According to Toyota engineers, the decision was made to use the imported engine because it is the most advanced of its kind in Japan.

Saab appoints 15 U.S. dealers during first half

ORANGE, Conn. — Saab-Scania of America appointed 15 new dealers during the first half of 1983.

Sten O. Helling, Saab's vice president of sales and marketing, said the company's sales were up 57 percent in the first half of this year.

Saab is aiming for a total of 350 dealers nationally. At the end of June, 323 dealers handled Saab cars, 56 exclusively.

New Saab dealers appointed during the first half of 1983 were: Diablo Lincoln Mercury-Saab, Concord, Calif.; Steven Motor Co., Tacoma, Wash.; National Auto Sales, Bellevue, Neb.; William Lehman Saab, Miami; Bart Starr Saab, Birmingham, Ala.; Nelke Saab, Old Saybrook, Conn., and TRA Imports, Knoxville, Tenn.

More are: O'Hara Lincoln Mercury-Saab, Mishawaka, Ind.; Wausau Datsun-Saab, Wausau, Wis.; State Street Subaru-Saab, Boise, Id.; Campbell Motors, Jackson, Miss.; Fair City Ford & Saab, Pomona, Calif.; Blackwell Import Motors, Jackson, Miss.; Croyste Toyota-Saab, Marlow Heights, Md., and Barber Saab, Bakersfield, Calif.

Total tops 800,000 for first time in 42 months

June registrations highest since '79

Continued from Page 7

1983, added to 557,564, giving June a 12.11-percent advantage.

Import registrations climbed 18.07 percent June to June, rising to 243,661 this year compared with 206,373 in 1982. Their market share slipped 0.72 percentage points, to 28.05 from 28.77 percent.

New-car registrations for the first half of 1983 were up 12.72 percent, to 4,258,857 from 3,778,109 last year. U. S. makes were up 11.21 percent, to 3,000,646 from 2,598,079, and imports enjoyed a 16.50-percent jump, to 1,258,211 from 1,080,030 for the first six months.

• General Motors and Chrysler Corp. walked away with increased shares of the total market for June. Chrysler gained 0.96 percentage points, edging to 9.42 percent from 8.46 percent, and GM was up 0.86 percentage points, to 44.78 from 43.92 percent.

Ford Motor Co. was off 0.50 percentage points, to 17.27 percent from 17.77 percent. American Motors dropped to a weak 0.47 percent from 1.04 percent (AMC registrations do not include the U.S.-built Renault Alliance, which appears among Polk imported-car registrations); miscellaneous domestics were down to 0.01 percent from 0.04 percent, and imports slipped to 28.05 percent from 28.77 percent.

In the domestics-only market, GM earned 62.24 percent, Ford had 24.00 percent, Chrysler had 13.10 percent, AMC had 0.65 percent and miscellaneous domestics claimed 0.01 percent.

The market-class analysis showed a continuing shift toward intermediate and standard-size cars which would seem to indicate consumer confidence in the strengthening economy and availability of gasoline to power bigger automobiles.

Imports accounted for the largest segment of 28.05 percent (243,661 units), followed by intermediates at 26.16 percent (227,254 units); then compacts at 17.18 percent (149,213 units); standards at 13.01 percent (113,061 units); subcompacts at 10.69 percent (92,903 units), and luxury models at 4.91 percent (42,646 units).

In June, 1982, imports held 28.77 percent of the market with 206,373 units; intermediates had 22.58 percent (162,013 units); compacts had 17.78 percent (127,572 units); subcompacts had 14.57 percent (104,483 units); standards had 10.91 percent (78,285 units), and luxury models had 5.39 percent (38,632 units).

Of the 1983 domestics-only market, intermediates had 36.36 percent, followed by compacts at 23.87 percent, standards at 18.09 percent, subcompacts at 14.86 percent and luxuries at 6.82 percent.

Chrysler Corp. and the combined imports increased their segments of the total U. S. market for the first six months, with Chrysler up 1.11 percentage points and the imports 0.95 percentage points ahead. Chrysler climbed to 9.76 percent of the market from 8.65 percent last year, and the imports expanded to 29.54 percent from 28.59 percent.

GM slipped 1.22 percentage points, to 43.32 percent from 44.54 percent. AMC was off 0.50 percentage points, to 0.72 percent from 1.22 percent. Ford dropped 0.31 percentage points, to 16.65 percent from 16.96 percent, and the few remaining miscellaneous domestic makes were down to 0.01 percent from 0.04 percent a year earlier.

Excluding imports, the market was divided thus for the first half of 1983: GM had 61.47 percent, Ford had 23.64 percent, Chrysler had 13.86 percent, AMC had 1.02 percent and miscellaneous domestics had 0.01 percent.

Kerfoot franchises sales program

SAN ANTONIO. — Brad Kerfoot, an automobile sales trainer here, is franchising his training program to 40 people across the U. S. and Canada.

For the last six years, Kerfoot has been holding classes to train auto salespeople in Florida and Georgia, and for the last three years the classes have also been in Texas, New Mexico and Colorado.

Kerfoot wants to sell his 15-hour program to dealers and managers and will invite those interested in his franchise to confer here in September to learn about the program.

Supercharged Lancia VX models bow

Lancia has added high-performance versions of its Coupe and H.P. Executive cars called VX models. VX cars are powered by a 2.0-liter twin-cam engine that is supercharged by Lancia's Volumex compressor. Power is increased to 135 horsepower, while driveability is also improved because of a boost in torque. The VX cars are said to have a top speed of 200 KM/H (124 MPH).

Makers schedule 143,892 units

Car production up 4 pct. for week

By Mary Beth Mayer
Staff Writer

Increases in production by General Motors boosted last week's estimated car production 4.14 percent above the previous week's output.

The auto makers targeted last week's production at 143,892, up from 138,176 assembled the previous week, and up a considerable 43.42 percent from 100,334 built in the year-ago period.

So far this year, there have been 4,336,797 cars completed, up 23.10 percent from 3,523,031 units finished at this time last year.

Breakdown for last week's production by company was: GM, 59.25 percent; Ford Motor Co., 22.72 percent; Chrysler Corp., 12.34 percent; American Motors, 3.00 percent; Volkswagen of America, 1.64 percent, and Honda, 1.05 percent.

For August, the makers estimated production at 524,779, up 48.39 percent from 353,656 units built that month last year.

Four Ford facilities worked daily overtime last week. The plants working extra hours were: Chicago, Kansas City, Lorain and St. Louis. Kansas City also worked last Saturday (Sept. 3).

This week, Ford's Wayne assembly point is scheduled to join those four plants in overtime operation.

Chrysler slated extra hours at its Belvidere, Jefferson and Newark plants. All U. S. car assembly plants are idle today (Sept. 5) in observance of Labor Day.

Trade chief sifts factors affecting exports, imports

Continued from Page 3

ferences between the dollar and the yen gave Japanese car makers a $750 advantage over U. S. producers.

Caldwell said he would like to see President Reagan gain recognition of the problem with Japanese Prime Minister Yashuhiro Nakasone when the two leaders meet in Japan this November.

Eckes did not speculate as to whether the Japanese would extend a fourth year of voluntary restraint on their auto imports to the U. S. But he did suggest that U. S. trade laws will probably undergo a congressional "house cleaning" and that "procedural amendments" could be made to strengthen or speed trade remedies.

• Eckes also mentioned the possibility of congressional oversight for industries that win government protection. He said Senator John Heinz, Pennsylvania Republican, and others were interested in ensuring that industries fully utilize opportunities to regain competitiveness when protection is granted by the government.

Eckes said foreign products had established strong positions in U. S. markets in three ways:

1.—By taking advantage of cost differences, they can produce certain standard goods more cheaply than American manufacturers.

2.—Disruptions in the American market, such as the two energy shortages, enable foreign suppliers to build market shares at the expense of U. S. producers.

3.—"Unfair tactics" are used to build market share.

"Over the past several years the commission has investigated more than 300 complaints alleging unfair trade practices, like foreign subsidies, dumping, or infringement of U. S. patents and copyrights," Eckes said. "In 57 percent of these cases the commission ruled in favor of domestic petitions."

The ITC is currently investigating the practice of industrial targeting and of possible abuses of U. S. foreign trade zones. Both studies are being made at the request of the House Ways and Means Committee.

Martin's 25th year

Twenty - five years of service were recognized when Colin M. Stewart Jr., right, Chevrolet North Central regional manager, presented a plaque to P. E. Martin, Martin Chevrolet, Inc., Warren, O.

Canadian output of cars, trucks rises for week

At 16,052, last week's estimated Canadian car production rose 4.75 percent above the 15,324 units assembled the previous week, but fell 17.21 percent from 19,388 in the year-ago period.

So far this year, 649,251 cars have been completed in Canada, up 7.44 percent from 604,331 built in the comparable 1982 period.

Truck production last week was targeted at 12,965, up 6.92 percent from 12,126 units assembled the week before. The total was 42.35 percent above the 9,108 units completed in the year-ago period.

Year - to - date, 346,129 trucks have been built, down 2.60 percent from 355,349 at this time in 1982.

Chrysler Corp.'s Windsor plant remained closed for retooling. It will begin producing the T-115 van/wagon in October.

American Motors' Brampton point was down last week for inventory adjustment.

Ford Motor Co.'s Oakville truck point worked overtime last week.

Truck output tops 1.5 million; leads 1982 by month

Overtime at six Ford Motor Co. plants lifted last week's domestic truck production 9.68 percent above that of the prior week.

Truck makers targeted last week's output at 46,919, up from 42,780 units built the week before, and a 40.10 percent increase over 33,490 assembled in the year-ago week.

Year-to-date, the makers have built 1,501,543 trucks, up 10.21 percent from 1,362,452 completed in the 1982 period. Last year, the domestic truck makers topped the 1.5-million mark in early October.

The Ford factories working overtime last week were: Kansas City, Loraine, Louisville, Norfolk, Michigan and Twin Cities.

Chrysler Corp.'s Warren point also logged overtime last week.

All U. S. plants will be closed today (Sept. 5) for the Labor Day holiday.

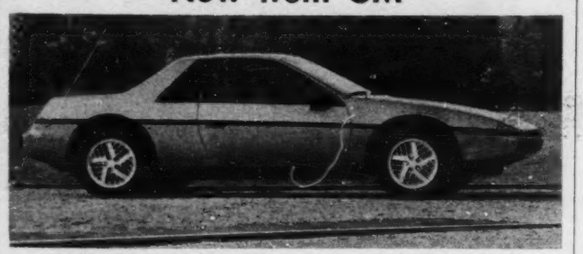
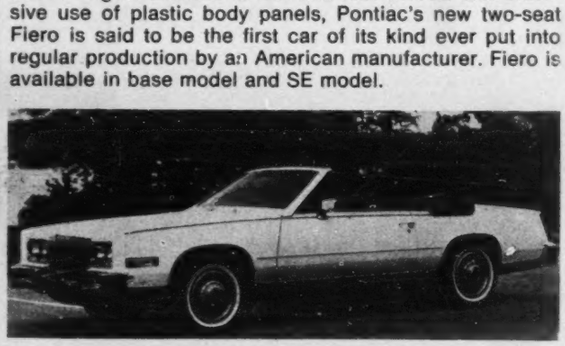
New from GM



Fiero: One of a kind

Distinguished by a space-frame structure, transverse-mount engine between driver and rear wheels and extensive use of plastic body panels, Pontiac's new two-seat Fiero is said to be the first car of its kind ever put into regular production by an American manufacturer. Fiero is available in base model and SE model.



Eldorado convertible is back for '84

Big news at Cadillac for 1984 is the return of the Cadillac Eldorado convertible. When the Eldorado convertible was phased out in 1976, it was the last American ragtop until the current revival.

Chevrolet expands mid-sized offerings

New in the Chevrolet Celebrity lineup for 1984 is this station wagon, available both in two-seat and three-seat versions. Standard engine is the 2.5-liter fuel-injected four; optional are a 2.8-liter V-6 and a 4.3-liter diesel V-6.

Ragtop sales to hit 67,000; two-thirds are U. S.-built

By Jim Plegue
Staff Writer

U. S. consumers will buy more than 67,000 convertibles during the 1983 model year, AUTOMOTIVE NEWS estimates, with nearly two-thirds of that market being captured by the domestic makers.

The estimate is based on 11-month sales rates for the six domestic and seven import convertible nameplates offered in the U. S. It does not include convertible conversions sold by independent builders, only those built or authorized by the manufacturer.

The domestic convertible makers — Chrysler Corp., Ford Motor Co. and General Motors — will sell an estimated 41,900 ragtops during the '83 model year, accounting for a projected 62.46 percent of the total U. S. convertible market.

And sales of domestic soft tops are expected to top 65,000 for the 1984 model year.

Import sales are forecast at 25,180 convertibles, or 37.54 percent of the market for the 1983 season.

Fastest selling nameplate of all convertibles—import and domestic—is Ford Motor's Mustang model, introduced in November of 1982. The $12,467 Mustang convertible ('83 price) is partially assembled at Ford's Dearborn assembly plant, then shipped to Cars & Concepts, Brighton, Mich., for top installation and finish work.

Chrysler Corp., which led the domestic ragtop revival with introduction of its LeBaron convertible (followed by the Dodge 400) in early 1982, will sell more convertibles during the '83 model year than any other company.

Combined 1983 model-year sales of LeBaron and Dodge 400 are estimated at 22,100, giving

breaking news

Domestic inventory climbs to 55-day supply

DETROIT.—The domestic new-car inventory stood at a healthy 55-day supply on Sept. 1, compared with a 48-day supply a month earlier. The increase was the result of the slower sales pace in August as the total number of cars in stock was actually down from a month earlier, to 1,087,570 from 1,102,103. Most of the Sept. 1 stock was comprised of carryover '83 models, but sales have been strong through the cleanup period and the industry is in an unusually healthy inventory position.

Added cost will come out of profits, corporation claims

Chrysler says pact won't hike prices

By Marjorie Sorge
Labor Editor

Although its new two-year labor contract with the UAW will cost Chrysler Corp. $1 billion, car and truck prices will not rise to pay for it, according to Thomas M. Miner, industrial relations vice president.

The new pact is expensive. It will cost Chrysler about $11,000 per worker by the time it expires Oct. 15, 1985. Chrysler's total cost per worker at that time will be $54,000 per year for wages and benefits. The company has about 56,000 UAW-represented salaried and hourly workers in the U. S.

"We are going to have to price against our competition. We are going to have to price against the Japanese," Miner said. "We have resigned ourselves to the fact that we have to get this out of productivity, we have to generate the money to pay for this settlement.

"This was a big chunk for our company to bite off at this time. We are going to have to pull our socks up and work on our productivity plan in order to assure that this settlement can be handled without affecting our ability to operate in the automotive market profitably."

But, according to Art Davis, auto analyst for Prescott, Ball & Turben, Chrysler will have to increase prices by 3 to 4 percent to stay even. He said it is possible for the company to price its new sports cars (Laser and Daytona) and minivans higher than had been scheduled in order to make up the gap. In that case, no one would ever know if prices had been raised since a figure has not been announced, he said.

Davis estimates Chrysler will sell 150,000 minivans and 150,000 sports cars during 1984. Laser and Daytona go on sale this month; the minivans in January.

The new agreement gives the Chrysler workers in the U. S. a

European makers enter era of intense competition

By Kathleen Hamilton
Financial Editor

The next five years promise to be a period of intense competition among European auto makers as they struggle with each other for sales in a relatively stagnant home market.

Japanese import penetration — although as high as 38.7 percent of Finland's unrestricted market this year — is expected to remain relatively stable in Europe through 1988.

The competition all will come from within Europe. And the latest Automotive News World Outlook, generated by Data Resources, Inc., indicates there will be no clear winners.

There could, however, be some clear-cut losers, as the cost of competing in Europe climbs. This year's tale of the British car market offers a prime example of the opportunities and pitfalls that could lie ahead for all of Europe during the period.

As the only major market in Europe showing any strength early this year, all of the big European auto makers descended on Britain in a battle for market share. Marketing incentives begun in 1982 were carried through 1983. Export dealer networks were strengthened.

With new product lines, British domestics battled back. And it looks as though everyone's marketing expenditures paid off: The forecast calls for auto registrations to climb 10 percent above last year's level to more than 1.71 million cars.

• The end of the year hasn't been as strong as the beginning, according to DRI Europe Economist John Lawson. And although sales projections for 1984 and 1985 have been scaled back because of what Lawson calls this year's overheated market in Britain, those years will still be strong.

"There is a limit to the time that continued marketing efforts can be effective" in expanding the market, Lawson said. Of course such marketing efforts are expensive.

All of the major European auto makers have been strengthening their distribution networks and marketing efforts throughout the continent. The measure became doubly important this year, as exports to oil-producing nations plummeted.

Projections through 1988 of the Big Four European auto-producing countries — UK, France, West Germany and Italy — show imports' penetration will be on a rise.

And since high-line cars are the usual export products, the makers who produce these models can be expected to fare better. That is especially true since North America, the UK and West Germany — all producers of more expensive vehicles — are the only major markets expected to grow.

The UK market is expected to average less than 2 percent annual growth during the 1983-1988 period; West Germany, 1 percent, while France and Italy will show virtually no growth. Throughout Western Europe, growth will average less than 2 percent a year over the period.

Although figures for the U. S. are available through 1985 only, growth should average close to

Month's total is 374,599

August sales in UK best ever for Europe

By Richard Feast
European Editor

LONDON. — August new-car registrations in the UK shattered all previous European records.

A total of 374,599 customers took delivery of new cars, 24 percent more than in the year-ago month when the previous UK record was established.

The total also surpassed the previous record for a single month in any European country, 361,000 in West Germany in March, 1979.

August took even the most optimistic industry people by surprise. They had been predicting around 315,000, still well above the previous year's 302,000.

Now, it is believed that year-end registrations will beat the record 1.716 million of 1979. Sam Toy, chairman of market-leader Ford of Britain, believes the total will reach 1.73 million.

In the first eight months of this year, the figure was 1,345,577, an increase of 19.1 percent over the same period last year.

Unlike the rest of Europe, August has become a boom month for new-car sales in the UK. It stems back to 1967, when the introduction of the new annual registration plate was moved from January to August. The change was urged by the automotive industry to stimulate car buying in what had been a slack time.

Now the system is almost out of control. August's 375,000 compares with a 139,000 average for each of the previous seven months. July's figure was little more than 490,000.

•. Ford's Toy believes two main factors have contributed to the high level of selling in the UK this year. Rejecting ideas that the cause is the industry's unprecedented promotional activity — which his company is trying to slow — Toy attributes it to a general lowering in interest rates and to a change in car purchase regulations.

Until August, 1982, new-car purchasers were required to pay a one-third deposit and to repay the balance within a two-year period.

Those credit terms, which applied only to car purchases, were completely relaxed — at a time when interest rates in general began to fall. The result was last year's second half boom, which continued into this year.

George Turnbull, president of the Society of Motor Manufacturers and Traders, thinks the UK could and should be a 2 million market. He wants the government to abolish the tax of 10 percent on new-car purchases — which is in addition to the standard 15 percent value added tax.

• Ford's August total was 115,833, a 33.4 percent increase over its August, 1982, total. It is believed to be the first time any Ford sales organization outside the U. S. has sold more than 100,000 cars in a single month.

Ford's market share was 30.9 percent, slightly better than its eight-month slice of 30.3 percent. In August, it placed Escort (40,912) and Sierra (36,562) in the top two places. Fiesta (27,553) was fourth behind BL's Metro (31,120).

BL's market share in August (18.3 percent) was down fractionally, but its unit sales of 68,662 showed a 23.4 percent increase over last August.

But by far the most impressive unit increase was by General Motors' Vauxhall-Opel. It registered 54,497 cars — a market share of 14.6 percent and a massive 73 percent climb over one year earlier. Vauxhall-Opel's 194,806 registrations in the eight-month period compare with the 181,737 it shifted in the whole of 1982.

Peugeot-Talbot's 19,546 meant a market share of 5.2 percent and a 34.2 percent improvement over August last year. For the full year, though, the company remains stuck at 4.6 percent.

The general August boom meant most importers sold more cars, even if they lost market share. The most notable exceptions, though, were Nissan and Renault which saw serious sales slides despite high demand.

Total imports for the month accounted for 56.8 percent (212,801), down from the 59.7 percent of one year earlier. There is a similar picture in the eight-month figures.

McDonald calls for extension of Japan's restraints

By John Hartley
Staff Correspondent

TOKYO. — General Motors President F. James McDonald said here last week that "an extension of voluntary auto export restraint could be a prudent action," and that he hoped the U. S. and Japanese governments would negotiate such a deal.

However, he indicated that projected imports of Suzuki and Isuzu autos by GM would be taken into account in the setting of the limit.

This remark seemed to contradict his statement that the matter was up to the governments, and it reinforced the suggestion by some insiders that in this visit McDonald hoped to influence the Japanese to add the Suzuki and Isuzu imports to any limits.

In fact, McDonald and Sosuke Uno, minister of international trade and industry, had a meeting arranged, but it was canceled by the Japanese at the last minute, a considerable discourtesy to the GM president.

While in Japan, McDonald visited the new factory Suzuki has built for the GM car. It has a capacity of 10,000 engines and autos monthly and the bulk are due to go to the U. S.

Meanwhile, details of the new car, called Cultus, were released in Japan. It is 141 inches long, with an 88.4-inch wheelbase, mundane styling and limited interior space. Its main feature is a lightweight aluminum three-cylinder engine weighing only 140 pounds.

Dole is chairman

WASHINGTON. — Secretary of Transportation Elizabeth H. Dole has accepted the position of honorary chairman for the SAE Government/Industry Meeting to be held May 21-24, 1984, at the Mayflower Hotel, Washington.

Sporty and practical

Fiero is at the heart of Pontiac's '84 launch. It is being positioned as a "thinking man's" sports car — practical as well as fast. D'Arcy-MacManus & Masius, Bloomfield Hills, Mich., handles.

Performance is in—and just in time

Pontiac ads keyed to new Fiero

By Joseph Bohn
Marketing Editor

PONTIAC.—The performance market is back, just in time for the introduction of Pontiac's new Fiero.

Fiero is clearly at the heart of Pontiac's '84 effort, a traffic-builder and image car, being positioned as "the thinking person's sports car," according to William Lane, general sales manager.

That means ads talking about not only style and performance, but also practical things like corrosion-resistance, durability and affordability.

Pontiac still has lots of other cars to sell—39 models and nine car lines, in fact, which is more than Chevrolet. This means squeezing more mileage out of a limited budget, but also greater opportunities.

Ed Benson, assistant general sales manager, feels that if the industry runs in the range of 10 million to 10.5 million sales next year, Pontiac will get 7 to 7.5 percent of the market — or roughly 1-1.5 percentage points more than in '83.

But back to Fiero.

A pre-introduction print campaign, breaking Sept. 12, calls attention to Fiero's new manufacturing process, providing Mercedes-Benz-style quality, without Mercedes sticker prices.

The ad quotes the New York Times. It notes that Pontiac engineers "developed a process for close tolerance body work that may not require Mercedes-Benz sticker prices," and closes with, "It's been called the most innovative American car in 25 years."

The pre-introduction print uses no pictures. It runs in enthusiast and business publications, like Road and Track, the New York Times and selected editions of Time and Newsweek.

Print leads into a regular full-scale announcement phase which is geared to match the Sept. 22 introduction. The entire purpose of this two-month "super duty awareness generator," according to Benson, is to make Fiero stand out from competitive clutter.

Its focal point is to "immediately register the name, uniqueness and exclusivity," Benson added.

For visual awareness, Pontiac created eye-catching graphics in print that take road signs and turn them into a road for Fiero. For example, a "Stop Wishing . . . Fiero is here" ad plays off the "Stop" sign graphics. Again, "Excitement Ahead" plays off

But market penetration declines

Import registrations jump for June

By Jenny L. King
Staff Writer

The number of new imported cars registered in the U. S. in June was up nearly 40,000 units and climbed 18.07 percent above the year-ago mark. But the domestics moved at an even faster pace, leaving imports with a smaller share of the total market than they had enjoyed a year earlier.

According to figures compiled by R. L. Polk & Co., new import registrations totaled 243,661 in June, up from 206,373 for the same month in 1982. They represented 28.05 percent of the market, down 0.72 percentage points from 28.77 percent a year ago. Their share was up slightly from May's 27.85 percent, based on registrations of 215,278.

Import registrations for the first half of this year reached 1,258,211, up 16.50 percent from 1,080,030 for the same period in 1982. Their market share increased to 29.54 percent from 28.59 percent.

The top importers dropped in shares of the market in June. Toyota was down 2.78 percentage points, to 21.47 percent from 24.25 percent. Nissan dropped to 20.20 percent from 22.57 percent, a difference of 2.37 percentage points. Third-place Honda was off 0.38 percentage points, Mazda was down 0.32 percentage points and Subaru slipped 0.37 percentage points.

Volkswagen dropped from fifth to sixth place and lost 0.86 percentage points. Renault Alliance, which is categorized as an import by R. L. Polk & Co., was seventh with a 4.97-percent share of the June, 1983, market. It was not on sale a year earlier.

Volvo was eighth, picking up

Did not give NHTSA misleading data, corporation says

GM denies U. S. charges on X-cars

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — General Motors has denied that it failed to give the government complete and accurate data in response to queries made by NHTSA during its investigation of the brakes on some 1.1 million 1980 GM X-body cars.

The GM statement was in reply to a Justice Department lawsuit that seeks a recall of the cars.

Further, GM said, while it did not include the NHTSA hotline number in its July 8, 1981, recall of 47,000 X-body cars with manual transmissions for a brake fix, the omission is not a violation of either law or "valid" regulation since the Reagan Administration had decided not to enforce that part of the regulation.

That "policy of nonenforcement," GM said, was "reflected in its pattern and practice of nonenforcement, especially during the period prior to October 1982, when the validity of the regulation was under review by NHTSA."

Moreover, GM said, the regulation was "invalid" because it was not legally promulgated.

The first part of GM's response was made to the government suit brought against GM Aug. 3 to force recall and correction of what the government says is a safety-related defect involving brakes. The suit also seeks $4,027,000 in damages.

It is the first time the government has ever sought damages from a car company. The suit claims there were at least 18 alleged instances of "false and misleading" responses.

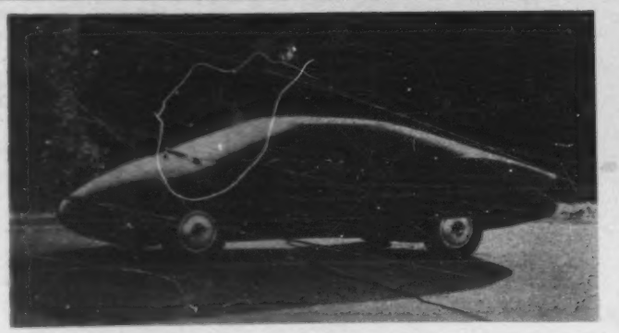
• In its partial answer, filed last week in Federal District Court in the District of Columbia, GM denied some of the charges but asked for a week's extension to respond to the issue of whether the brake problem was safety-related.

GM will either move that the court dismiss the charges or, alternatively, refer them back to NHTSA to proceed administratively.

GM has already said it will fight the charges. GM specifically called its early recall one to "allay customer concern." At the time of the recall, GM denied there was a "safety-related" problem and said it acted to "preclude the possibility of prolonged and costly litigation."

The government charged GM knew before start of production that the early X-body cars with manual transmissions needed less aggressive brake linings because a special task force set up by GM had so recommended yet GM had neither informed the government or made the change.

GM, in its court filing last week, admitted it created the task force but denied the other charges.



A Chevrolet for the 1990s?

Chevrolet believes the Citation IV, a four-place concept vehicle with a V-6 engine, could be in production in the 1990s. It is shaped to yield a .18 aerodynamic drag coefficient and highway fuel economy in the 60-MPH range. The car is 6.4 inches longer and 6.4 inches lower than the 1984 Citation II.

Citation IV could be produced in 1990s

Chevy shows a car of the future

WARREN, Mich. — Chevrolet is showing off Citation IV, a concept car that could be produced in the 1990s.

It's a driveable version of an aerodynamic show car Chevrolet unveiled last spring. Citation has front-wheel drive and is powered by a V-6 engine. It seats four and, according to Chevrolet, has potential fuel economy in the 60-MPG range.

"We think of today's Citation II as a second-generation front-drive Chevy," said Chevrolet General Manager Robert C. Stempel. "Assuming it will be followed in a few years by Citation III, then a car like this could be in line for production by the end of the decade."

Stempel said the Citation IV is the most aerodynamic car ever built by Chevrolet. Coefficient of drag is targeted in the .18 range.

"But even so, the main thing about this car is not its aero," he said. "It's the packaging.

"At first glance, there's no way to put this kind of front-drive hardware in a car like this."

The 60-degree port-injected V-6 engine incorporates electronics in both fuel metering and ignition systems. The engine has neither carburetor nor distributor.

Neither does it have a conventional air cleaner, conventional intake manifold or conventional valve covers. Chevrolet said their absence helps explain how its engineers squeezed the engine by seven inches top to bottom so it would fit beneath the Citation IV's sharply inclined clamshell hood.

Mated to a computer-control three-speed automatic transmission, the V-6 is rated at 140 HP.

Although rear suspension is a conventional crossmember with trailing arms and coil springs, front suspension incorporates a fiberglass transverse monoleaf spring linked to upper (not lower) control arms.

The spring is situated high to the rear of the engine compartment.

Citation IV is 6.4 inches longer and 6.4 inches lower than the current Citation. Although the future car's wheelbase is 2.2 inches shorter, rear overhang is almost seven inches longer.

The Citation IV dimensions are: Wheelbase, 102.7 inches; overall length, 183.1 inches; width, 68.7 inches; height, 47.5 inches.

Springing from the aero show car, which produced a .14 coefficient of drag in GM tests, Citation IV is distinguished by its

Lada Canada unhurt by downing of airliner

By Roger Rowand
Engineering Editor

WINDSOR, Ont. — Edward Klein, co-owner of the Lada dealership in this border city, looked a little like a man waiting for the other shoe to drop last week.

But, in the wake of the Soviet downing of Flight 007, sales of the Russian car have been steady, apparently unaffected.

Ten Canadians died in the Korean Air Lines crash Sept. 1.

"The car is good. The car is not political," said Klein. He said he has seen no signs of public antagonism.

At Lada Cars of Canada, Inc., Ajax, Ont., a similar marketplace reaction was reported by John Wright, national marketing director.

He said one picket had been reported at one dealership. His company has 80 dealers, up from about 65 a year ago, he said.

Wright said he was apprehensive upon hearing of the plane's loss. "You always have to wonder," he said.

There was more consumer reaction when Afghanistan was invaded by the Soviets in June, 1979, Wright said.

"We're much more established now," he said.

• Lada Cars of Canada wired its dealers the day after the plane was shot down.

In the wire, Wright expressed his concern over public reaction and its effect on morale and sales.

"We have weathered storms before. We will weather this turbulence," he said.

He urged dealers not to overreact or make hasty judgments.

"Finally, let me say I don't think you and I have to be defensive about this situation," Wright said in his telegram. "Lada Cars of Canada is a wholly owned Canadian company trading in sound, honest-value products and you are part of a perfectly normal marketing network.

"We are not politically involved. We are in the business of selling cars," he said.

Service volume rises, but growth tapers off

By Francis J. Gawronski
Service Editor

Although the rate of growth of service and parts business written by new-car dealers in July cooled off somewhat from the pace registered in the two previous months, the volume still managed to record the fourth biggest increase of 1982.

According to the Automotive News Service Index, shop volume in July amounted to 107.8 percent of the business recorded in the same month the year before.

In June and May, shop business was 115.6 and 115.1 percent, respectively, of the business written in the corresponding months of 1982. The gain in June was the best showing for shop business since January, 1979.

July's increase marked the fifth consecutive month in which the new-car dealers' service-parts volume has shown an increase over the comparable year-earlier period.

For the third consecutive month, all five indicators used in the Service Index were up, led by sales of all parts and accessories, with an increase of 12.4 percent.

• The next best gainer was gross profit on all labor, parts and accessory sales — the most important indicator from the dealer's viewpoint. It topped last year's figure by 9.3 percent, followed by shop parts sales, those used on both customer-paid and warranty work, which climbed 7.5 percent.

Total labor sales (customer-paid and warranty) exceeded last year's figure by 4.3 percent, while repair orders written were up 1.9 percent.

Figures used in the Service Index are averages compiled from reports on shop operations from a cross-section of the nation's new-car dealers.

Because of the decline in the rate of growth in July, service and parts business for the January-July period remained at 107.3 percent of the volume recorded for the same period last year. This was the same as the midyear figure.

Gross profit showed an increase of 9.4 percent, followed by shop parts sales at 8.6 percent, and sales of all parts and accessories at 8.4 percent of the year-ago volume.

Labor sales for the seven-month period registered a gain of 7.0 percent, and repair orders written edged up 0.6 percent over the year-earlier figure.

SERVICE INDEX
107.8*

	July, '83 vs. July, '82	7 mos., '83 vs. 7 mos., '82
Gross Profit on All Labor and P&A Sales	+ 9.3%	+ 9.4%
Repair Orders Written	+ 1.9%	+ 0.6%
Total Labor Sales (Customer & Warranty)	+ 4.3%	+ 7.0%
Shop Parts Sales (Customer & Warranty)	+ 7.5%	+ 8.6%
Sales of All P&A	+12.4%	+ 8.4%

*—Survey by Automotive News shows that dealers' service and parts business in July, 1983, was 107.8 percent of business in July, 1982. Service business in the seven months of 1983 was 107.3 percent of business in the corresponding period in 1982.

Imports gain 5 pct. for month

August domestic sales up 29 pct.

By Jenny L. King
Staff Writer

August new-car sales continued the upward trend established late last winter, with domestic-built products up 29.69 percent and imports 4.93 percent ahead of August, 1982, levels.

It was the sixth consecutive month of improved domestic sales and the eighth this year of pluses for the imports.

Imports claimed 28.26 percent of the August market, down from the any-month record of 32.74 percent notched in August, 1982.

Sales of domestic cars totaled 530,960 for the eighth month of the calendar year, up 29.69 percent from a dreary 409,411 in 1982. In 1981, August sales were 601,741, and in 1980 they amounted to 486,420. (August, 1981, was a big rebate month for the U. S. auto makers.)

The daily selling rate for domestics was 19,665 for the month, based on 27 selling days. This was up 24.88 percent from last year's rate of 15,757 based on 26 selling days.

Sales of imported cars were up 4.92 percent in August, to 209,113 units compared with 199,306 in 1982. Year-to-date import sales were up 11.23 percent, to 1,668,236 from 1,499,866.

Sales of domestic cars were up 17.72 percent the first eight months of this year. Sales totaled 4,442,778 January through August, compared with 3,774,143 in 1982.

• The industry total for August was 740,073, up 21.58 percent from 608,716 last year. Grand total for the eight-month period

Caprice coupe returns; bigger role for Cavalier ragtop

Celebrity wagon joins Chevy lineup

Hottest items for 1984 from Chevrolet are the introduction of the Celebrity wagon and the return of the Caprice Classic coupe. The Malibu line has been phased out.

The Celebrity wagon is available for 1984 in two-seat and three-seat versions. Also new for the Celebrity line is the Eurosport package for sedan and coupe models, which includes black-finished hardware instead of bright trim, rally wheels, sport steering wheel and sport suspension.

Standard engine on all Celebrity models is a 2.5-liter fuel-injected four. Optional powerplants are a 2.8 liter V-6 and a 4.3-liter V-6 diesel.

The Caprice Classic coupe returns to the standard-size lineup for '84 after it had been discontinued for '83. Standard engine for all Caprice Classic and Impala models except wagons is a 3.8-liter V-6 with three-speed automatic transmission.

Standard on the wagon is a 5.0-liter V-8 with four-speed automatic. A 5.7-liter diesel V-8 is available except in California.

• The Cavalier gets a facelift for '84, with more aerodynamic front-end styling and quad rectangular headlamps.

The convertible, although it was introduced late in the '83 run, is what Chevrolet is most proud of in its '84 Cavalier line. Chevrolet expects the convertible to be a major factor in making Cavalier Chevrolet's best-selling car.

The base notchback coupe has been discontinued, apparently an effort to upgrade the Cavalier line. Power is provided by a 2.0-liter four which features high-compression and high-swirl induction.

The Chevette is largely unchanged for '84, other than addition of a fuel line heater on diesel models, optional sport wheel covers, a new fuse block to accommodate flat fuses, a map pocket on the passenger front door and optional chrome bumpers.

Base engine is a 1.6-liter four, with a 1.8-liter diesel four optional.

Also largely unchanged for '84 is the Citation. New features include refined engine mounts, new exterior ornamentation and new speed control system.

Standard engine for all Citations except the X-11 is a 2.5-liter four with fuel injection. Optional are a 2.8-liter V-6 and a high-output 2.8-liter V-6, which is standard on the X-11.

Although the Malibu is gone for '84, its sister model the Monte Carlo remains. New options for '84 include a new four-speed automatic transmission. Engine choices include 3.8-liter V-6 (standard), two 5.0-liter V-8s and a 5.7-liter diesel V-8.

The Corvette, of course, was introduced earlier this year as an '84 model and is continued.

• The '84 Camaro takes a leaf from Corvette's book as an electronic instrument cluster with digital display is standard on the Berlinetta.

Unusual are the dual adjustable control panels. Flat black pods adjust outward from the instrument panel to within a fingertip of the steering wheel to put light controls and switches controlling speedometer and tachometer displays, windshield wiper and interior climate controls within easy reach.

A pedestal-mounted radio swivels on a base built into the floor console. AM-FM stereo ETR radio with digital clock is standard.

Also standard on the Berlinetta is a roof console which contains a map light and switch, dome light, a storage pouch and a flashlight.

Standard engines are a 2.5-liter four in the Sport Coupe, a 2.8-liter V-6 in the Berlinetta and a 5.0-liter V-8 in the Z-28.

New on all Chevrolets for '84 are fourth-generation all-season tires.

Chevrolet's public introduction date is Sept. 22.

Chevrolet for 1984

	Wheelbase (Inches)	Length (Inches)	Width (Inches)	Height (Inches)	Curb Weight (Pounds)
Caprice/Impala	116	212.8	75.3	56.4	3,628
Celebrity	104.9	188.3	67.8	53.7	2,703
Monte Carlo	108.1	200.4	71.8	54.3	3,292
Citation	104.9	176.7	68.3	53.9	2,529
Camaro	101	187.8	72	49.8	2,932
Cavalier	101.2	174.3	66.3	53.9	2,386
Chevette 2-door	94.3	161.9	61.8	52.8	2,261

Corvette	96	176.5	71	46.7	3,169

Caprice coupe returns to lineup

Restored to the full-size Chevrolet line for 1984 is the Caprice Classic Coupe, which was not available in 1983. Engine offerings include V-6 and V-8 gasoline engines and a V-8 diesel.

Monte Carlo SS is a hot one

A new four-speed automatic transmission is available on the 1984 Monte Carlo. The SS model, shown here, is powered by a 305-cubic-inch V-8.

Gasoline price rose 96.4 cents from 1973-1983

ROCHESTER, Wis.—The average price of gasoline rose 96.4 cents per gallon at the pumps from mid-1973 through mid-1983, but won't go up more than 5 cents per gallon, on average, through mid-1984, according to Runzheimer Reports on Transportation, an industry newsletter.

This small increase discounts any political upheavals that might lead to upward pressure on prices, Runzheimer said.

The greatest upward jumps in the price of regular no-lead gasoline occurred in 1974 (16.9 cents), 1979 (26.2 cents), 1980 (33.6 cents), and 1981 (13.9 cents). During those times, rising demand for petroleum and international political tension caused price hikes in gasoline.

Outside of those four years, the maximum price of gasoline increased only 4.7 cents per gallon in any one year during the last decade.

This historical perspective combined with a current analysis of the entire petroleum industry, led the editors of the newsletter to their gasoline price prediction.

GASOLINE PRICES, 1973 TO 1983 (Regular No-Lead)

Year	Price Per Gallon	Cent-Per-Gallon Change
1973	42.3*	
1974	59.2	16.9
1975	61.9	2.7
1976	63.4	1.5
1977	68.1	4.7
1978	70.2	2.1
1979	96.4	26.2
1980	130.0	33.6
1981	143.9	13.9
1982	140.7	-3.2
1983	138.7	-2.0

*Based on full-service, name-brand prices.

Cavalier convertible highlights '84 line

Chevrolet's Cavalier convertible is expected to play a bigger role in the division's sales plans for 1984 because of increased availability. The '84 features new front styling. It is powered by a fuel-injected two-liter four-cylinder engine.

Citation X-11 for 1984

The Chevrolet Citation X-11 is distinguished by 14-inch cast aluminum wheels, a rear spoiler and a high-output 2.8-liter V-6 engine rated at 135 HP.

Camaro gets electronic dash

The Chevrolet Camaro is unchanged for 1984, except for the new electronic cockpit in the Berlinetta, which features a combination of digital and mechanical instruments, pedestal-mounted radio and roof console.

Chevette is U.S. price leader

The lowest-priced car built in the U.S. in 1983, the Chevrolet Chevette is expected to retain that status in 1984. The four-door model shown here is equipped with new sport wheel covers.

Added cost will come out of profits, corporation says

Chrysler pact won't boost prices

Continued from Page 1

$1 an hour cost-of-living increase retroactive to Aug. 15, 1983, and an additional $1.42 an hour increase over the life of the agreement. Those raises will give the Chrysler workers current parity with their counterparts at General Motors and Ford. Pension benefits and insurance were also restored to current parity.

• The Chrysler workers made almost $1 billion in concessions when the company faced bankruptcy and now lag behind Ford and GM by about $2 an hour. That will rise to $2.42 next June when COLA payments, deferred at the Big Two under their current contracts, are restored.

The Chrysler workers will vote on the new agreement tomorrow (Sept. 13).

UAW President Owen Bieber said the Chrysler workers "deserve this contract." He said it was "a direct result of the strong, principled position that our union took this summer when we asked that Chrysler reopen bargaining talks." Those talks fell apart after three days of negotiations leaving the possibility of a strike hanging heavily over Chrysler when that agreement expired in January.

Chrysler wanted the agreement settled now to avoid labor problems in January when it will be introducing the Dodge Caravan and Plymouth Voyager minivans.

"We did richen up the package in order to get this done and avoid a problem in January," Miner said.

The agreement was rich enough to increase Chrysler's labor cost from the current $21 an hour to $26 an hour when the pact expires on Oct. 15, 1985, Miner said. GM's current labor cost is $21.60 and Ford's is $23.37. Those companies negotiate new agreements next year.

According to the UAW, the new contract will give the average Chrysler worker an additional $8,625 in wages and COLA over its 25-month life span.

One Chrysler official said a janitor will be making between $22,000 and $23,000 a year straight time while a skilled trades worker will make about $27,000.

• Bieber said he was "elated" with the new contract which had "no carveouts." But, while there were no concessions, some things did get lost.

The workers gave up profit sharing last year in exchange for more in-pocket money. Profit sharing was not restored. That program could have generated as much as 75 or 80 cents an hour by the end of this year because of Chrysler's profitability, one source said.

Also eliminated was the Employe Stock Option Program (ESOP) which was mandatory under the Loan Guarantee Act. This is the last year for that plan and the final distribution will be next June.

The Oct. 15, 1985, expiration date throws Chrysler off the pattern bargaining tract. Contracts for Ford and GM expire Sept. 15, 1984, and it is unlikely a 13-month agreement would be reached at the Big Two.

Pulling away from the traditional pattern bargaining technique will leave Chrysler free to negotiate its own agreement without constant pressure from settlements at Ford and GM.

While analysts believe Chrysler can afford the agreement, at least in the short term, the entire payment plan is based on future profitability. According to Miner, Chrysler can't operate two months on the money it has now — "it is the money we are going to make a week from now that alows us to run a month from then."

In order to allow Chrysler to earn the money, the contract is back-loaded with $1.12 in COLA recovery increases scheduled for 1985. The Chrysler workers gave up COLA in 1981.

The first 40-cent-an-hour raise is scheduled for March, 1985; a second 40 cents is due in June and a 32-cent raise will be paid in September. Workers will get a 30-cent-an-hour annual improvement factor (AIF) raise in June, 1985.

Back-loading could be a problem if sales of the new vehicles don't take off or if the small-car market drops off in 1985, Davis warned.

• Still, Davis believes Chrysler made the best choice, not risking a shutdown in January. He said the new models will take off and is predicting that Chrysler will earn $7.50 a share pre-tax this year and $11 a share pre-tax next year.

Miner predicted that Chrysler will be profitable in both the third and fourth quarters this year even with the $1 billion settlement.

That $1 billion figure also reflects the cost of passing on the contract to non-union salaried workers

Paying for the pact will come from increased productivity which includes energy conservation, cheaper inventory systems, new technology and taking unnecessary people out of the plants through attrition and absorption as well as a more productive labor force.

There is no written commitment from the union to increase productivity but a UAW spokesman said "the union has never resisted the introduction of new technology or other steps to increase productivity. We will do everything we can to help Chrysler improve productivity."

But, Miner said, "We are going to have to get more productive in this country or we are going to lose the auto industry in this country and this is something that the UAW has got to come to grips with sooner or later.

"There is no indication that we have been able to see that the UAW is the least bit interested in coming to grips with this. They talk about it, but they talk about it while they go to the bank."

• Meanwhile, Chrysler and the UAW in Canada reached an agreement last week for the 10,000 UAW-represented workers there. That pact provides a $1 increase retroactive to Aug. 15 and an additional $1.29 over the life of the agreement. That will bring the Canadian workers to current parity with their counterparts at GM and Ford.

Under the new pact workers will get a 28-cent raise in March, 1984; 38 cents in March, 1985; 40 cents in June, 1985, and 23 cents in September, 1985.

COLA will also continue on the current formula based on the combined U. S. and Canadian Consumer Price Index until March, 1984, when the formula will be based on only the Canadian Index. It is estimated that COLA payments will be $1.28 over the 25-month contract based on a 5.5 percent inflation rate.

Pensioners were also elevated to parity with Ford and GM.

Chrysler also agreed to try to find a way to reopen the Windsor Spring plant, idle since July.

Bieber released from hospital

DETROIT. — UAW President Owen Bieber spent three days in Henry Ford Hospital last week after a fall at a press conference at which he discussed the new UAW-Chrysler contract. He was released from the hospital Thursday.

As the press conference ended, the 6-feet, 5-inch Bieber pushed back his chair and tumbled from the dias, hitting his head against a wall. He was hospitalized to check for a possible concussion.

Major points of Chrysler's labor contract

Following are highlights of the the Chrysler-UAW contract:

1. A $1-per-hour COLA recovery increase, retroactive to Aug. 15, 1983. Retroactive payments will be made shortly after ratification.
2. A 3 percent Annual Improvement Factor (AIF) increase, effective June 4, 1984, which will average 30 cents an hour.
3. A 40-cent-an-hour COLA recovery increase, effective March 4, 1985.
4. A 40-cent-an-hour COLA recovery increase, effective June 3, 1985.
5. A 32-cent-an-hour COLA recovery increase, effective Sept. 2, 1985.
6. Payment of all regular quarterly COLA adjustments, when due, during the term of the extended contract, continuing at the current rate of 1 cent per each .26 rise in the Consumer Price Index (on the same basis as the UAW-GM contract).
7. Restoration of the pension differential between Chrysler and GM-Ford — 50 percent effective retroactively to Sept. 1, 1983, and the other 50 percent in September, 1984.
8. Restoration of all life insurance, accidental death and dismemberment insurance differentials between Chrysler and the GM-Ford pattern — 50 percent effective Sept. 1, 1983, and the other 50 percent in September, 1984.
9. Maintenance of all health and other economic benefits in the current contract, with insurance improvements to be computed as if the AIF increase had been folded into the contract Aug. 15, 1983.

GM C-car delay may trigger model-year change

DETROIT. — The upcoming General Motors front-drive C-body cars—Oldsmobile 98, Buick Electra and Cadillac DeVille—may debut so late they'll be 1985 models and not '84s as planned. "If it's as late as the first of April, it'll be an '85 model," said Cadillac sales official of the DeVille. "But, we'll hit the ground running because we've got a $600 million plant that's idle and a large segment of the public anxious to get these cars."

Mercedes 500 has $750 gas-guzzler tax

DETROIT.—The gasoline-powered Mercedes-Benz 500-SEL and 500-SEC, new for the 1984 model year, will bear an Internal Revenue Service gas guzzler window sticker and each buyer will be taxed $750. The big-ticket German cars have not been priced yet.

Ford Tempo in top sales spot

DETROIT.—Ford Division's all-new 1984 Tempo, on sale since last May, captured the crown of best-selling-nameplate in both the mid-August and late August selling periods.

Ragtop sales to hit 67,000; two-thirds are U.S.-built

Continued from Page 1

Chrysler Corp. half of the domestic market and nearly a third of the total convertible market.

Prices for the 1983-model LeBaron convertibles range from $10,995 for the base model to $15,595 for the Town and Country trim version. Dodge 400 convertibles carried a 1983 sticker of $9,995.

Chrysler is updating its convertibles for the '84 model year with addition of a new glass backlight, power glass quarter windows and an expanded rear seat. The Dodge 400 will become the Dodge 600 convertible.

General Motors is expected to earn a 4.62-percent share of the convertible market during 1983, with estimated model-year sales of 3,100 units. The company offered three convertible models—the Buick Riviera ($25,202), Chevrolet Cavalier ($10,990) and Pontiac 2000 Sunbird ($11,299). All three are built by ASC, Inc., Southgate, Mich.

GM's volume leader is the Riviera, with projected 1983-model sales of some 2,000 units. Buick sold 294 Riviera convertibles during its first abbreviated model year (it was introduced as an '82 model in July of 1982). Chevrolet said it sold 600 Cavalier convertibles during the 1983 model year, while Pontiac said it expected to sell about 500 Sunbird convertibles.

Domestic makers will sell more than 65,000 convertibles during the 1984 model year, according to company projections and AUTOMOTIVE NEWS estimates, an increase of 56 percent over 1983 sales.

Sales of Ford Mustang "drop-tops" will exceed 23,000 during the '84 model year, its first production year, the company said. Pontiac has estimated a 4,000-unit market for Sunbird convertibles during 1984. Chevy said it expects 7,000 Cavalier convertible sales during 1984. Cadillac, meanwhile, will introduce an Eldorado convertible for 1984. Cadillac has targeted sales of 3,000 Eldorado convertibles during 1984. Estimated price tag is $30,000.

Among the imported convertibles, Volkswagen and Mercedes-Benz are the volume leaders.

Sales of VW's Rabbit convertible, introduced in 1979, will be close to the 10,000-unit mark during 1983. VW sold 8,985 Rabbit convertibles during the '82 calendar year. The Rabbit convertible is priced at $10,595.

Mercedes-Benz is expected to sell nearly 8,000 copies of its $43,000 380-SL convertible during 1983. During 1982, Mercedes sold 8,400 1982-model 380-SLs.

Other import convertible models sold in the U. S. include the Porsche 911-SC Cabriolet (introduced in February of this year), the Fiat Spider, Alfa Romeo Spider, Rolls-Royce Corniche and Aston Martin Volante.

As Congress moves to tighten rules on fringe benefits

Demos to retain tax-free status

WASHINGTON. — The Reagan Administration's refusal to back legislation that would rewrite fringe benefit tax laws virtually assures continued tax-free demonstrator cars and car discounts for auto dealer salespeople.

The NADA supports the legislation now in Congress with the provision that auto dealer privileges be protected.

Sponsors say the bill seeks to counter a surge in "tax-free" benefit packages now offered by many employers. Company benefits, often non-taxable, are used by employers to attract high-level talent. Company cars often are a big part of such arrangements.

The House bill would convert these fringe benefits into taxable income, but it would not tax demonstration vehicles used by auto salespersons. Congress has talked of taxing demonstrators for several years.

• NADA President William C. Turnbull told the subcommittee that "any personal benefit to a salesperson from the use of a demonstrator is merely collateral" to the business of selling cars and should have no tax consequences.

Turnbull said agreements between dealers and their sales staff varied but the "common thread" were provisions requiring that the car be kept clean, that personal items not be stored in the car, that the car be showable for sale at any time and that mileage be kept to a minimum.

He said the salesperson must often use the demonstrator as a condition of employment and that the dealer chooses which cars are to be used.

On the question of employe discounts for new cars, parts and service, Turnbull said, "We feel this type of benefit helps solidify employe-employer relations and helps demonstrate loyalty to the dealer's product."

He said he was unaware of cases where discounts exceeded 20 percent of the price being offered to customers.

Fort Lauderdale police buy used cars instead of renting

FORT LAUDERDALE.—Used-car dealers here are pleased that the Fort Lauderdale Police Department will now purchase year-old cars for its surveillance by detectives and undercover police officers.

For years, the police department has rented new cars for police officers, but during the last three years, officials have also been purchasing year-old automobiles, using them for one year and then selling them at public auction.

According to a city official, the savings on maintenance costs and rent, when added to the resale value of the cars, averages more than $70,000 per year.

He said that these savings have convinced him to purchase 16 one-year-old cars this fall and eliminate the use of rental cars.

The official said that the use of older cars makes the detectives' activities less conspicuous.

The police department used to rent about 67 cars per year as the most cost-effective way to obtain the cars. Recent trends, however, make it more cost-effective to own the cars.

An official cited latest maintenance and repair costs which averaged $250 per month on each of 35 '82 cars the city purchased. This compared with a cost of $410 per month on each of 18 rental cars.

High interest rates, which were said to be crippling area rental-car outlets were blamed for the difference.

City officials indicated that it is possible that within a few years conditions might change and they might find it more feasible financially to rent their cars if the interest rates came down.

But they indicated that it was all a matter of balancing the books and if one mode of operation was financially superior, the city would have to choose that method.

Called best-made; Rolls-Royce, Chevrolet are runners-up

Mercedes seen best, survey finds

NEW BRUNSWICK, N. J.—A telephone survey conducted by R. H. Bruskin Associates determined that those queried feel that Mercedes-Benz is "the best-made automobile produced anywhere in the world."

About 19 percent of the respondents named Mercedes and 13 percent picked Rolls-Royce/Bentley. Chevrolet was third with 10 percent and was the highest-rated American product.

The study was based on 1,000 completed telephone interviews with male and female adults conducted between June 10 and June 12.

Those called were asked: "Regardless of cost, what do you feel is the best-made automobile produced anywhere in the world?" These are the makes that were mentioned most often:

Make	Percentage Mentioning
Mercedes-Benz	19.2
Rolls Royce/Bentley	13.4
Chevrolet	10.3
Ford	6.4
Cadillac	4.2
Oldsmobile	3.9
Toyota	3.8
Chrysler	2.6
Buick	2.5
Datsun	2.3
Porsche	2.2
Pontiac	1.9
BMW	1.8
Lincoln	1.7

Males tended to be more impressed with Mercedes-Benz than females. The car was named best by 22.6 percent of the men queried and 16.1 percent of the women.

The same was true of Rolls-Royce/Bentley — 18.7 percent male and 8.5 percent female.

• Chevrolet, on the other hand, was favored more by women (11.2 percent) than by men (9.2 percent).

More women than men also chose Toyota and Datsun.

Persons in the 18-24 age bracket placed Chevrolet in the top spot (16.8 percent), slightly ahead of Mercedes (16.3 percent).

Those in the 25-49 group chose Mercedes by a wide margin, followed by Rolls-Royce/Bentley and Chevrolet. Rolls-Royce/Bentley got the nod from those 50 to 64. Chevrolet was the favorite of those 65 and over.

Family income also played a part in the selections. Mercedes was the choice of 27.3 percent in the $30,000-a-year class and of 28.1 percent in the $40,000-and-over group.

Chevrolet's strength was with the less affluent — 13.4 percent under $15,000; 11 percent of those making $15,000 to $20,000 and 12.4 percent of those in the $20,000-to-$30,000 category. Chevrolet tailed off to 6.7 percent in the $30,000 class and to 3.5 percent in the $40,000 bracket.

A high for the Lows

William D. Neil, second from left, Lincoln-Mercury Division's Chicago district sales manager, presents a 25-year anniversary plaque to three generations of the Low family which operates Low Motor Co., LaCrosse, Wis. They are, from left, Elmer C. Low, Jack L. Low and Steven M. Low. The occasion also marked the opening of the family's new $1 million L-M facility.

Allstate reduces insurance rates on Toyota Camry

SAN FRANCISCO. — Allstate Insurance Co. has announced it will grant owners of '83 Toyota Camry models an immediate 10 to 20 percent reduction in premiums for collision and comprehensive insurance coverage.

Allstate based its decision on a technical analysis of the Camry design, conducted by Tech-Cor, Inc., which praised what it described as "the Camry's superior damage and repair design features."

Tech-Cor cited engine compartment components relocated a few inches rearward so they won't be damaged in minor collisions, and bumpers designed to meet the government's former 5-MPH standard.

Other features of the Camry said to help reduce repair costs include components which are bolted rather than welded in place, for fast removal and replacement, and components designed in several pieces so that the entire unit need not be replaced in case of minor damage.

Tech-Cor also praised Toyota for helping to improve quality repair techniques throughout the body repair industry by offering factory prepared collision repair manuals to independent body repair shops.

Indiana man buys his 25th new Buick

KENTLAND, Ind. — Buick has a loyal fan in Howard C. Washburn, 87, who has taken delivery of his 25th new Buick.

Washburn, who purchased his latest Buick from Carl Curran Chevrolet-Buick, Inc., here, bought his first Buick, a 1915 Touring Car, when he was 19.

WHY ARE WE A CENTURION DEALER?

Ms. Treva McDermett, *Owner & Dealer* — Cecil Phillips, *General Manager*

"As a dealer..." I look for an exceptional product and company for our customers and the dealership. Centurion-Lehman Manufacturing with their CENTURION vehicles offers an excellent assistance program on interest, advertising, referrals and show promotions. With a CENTURION, our customers can have heavy duty towing with a quality and luxurious vehicle."

Ms. Treva McDermett, *Owner & Dealer*

Cecil Phillips, *General Manager*

Kalkaska Ford-Chrysler
Kalkaska, Michigan

Progressive automotive dealers are getting in on the "ground floor" of a profitable opportunity. By becoming Centurion dealers they are able to sell America's hottest new tow vehicle—the Centurion Cruiser. Loaded with features customers demand most, such as luxury, power and comfortable ride, Centurion will sell itself. If you have turned customers away who are looking for this impossible dream, perhaps it's time you become a Centurion dealer. An outstanding dealer support package is provided including protected territory, financial and marketing assistance. Call us today and get the details on becoming a Centurion dealer. Don't delay. Some prime markets are still available!

New from Ford of Australia

Ford Motor Co. of Australia, Ltd., has introduced the TX5 front-wheel-drive, two-liter hatchback. The sporty, five-door car is based on the Mazda 626 and has been designed for fuel economy and brisk performance, Ford said. The suspension of the TX5 incorporates an electronic variable shock absorber setting control, enabling the driver to select the desired ride.

Wharton says local content would not create new jobs

PHILADELPHIA.—Establishing domestic-content requirements for motor vehicles sold in the U. S. would not create new jobs and would lead to sharply higher automobile prices for the American consumer, according to economists at Wharton Econometric Forecasting Associates.

The economists said the legislation would cause significant job losses in non-automotive sectors of the economy.

According to George Schink and Colin Loxley, the principal authors of the study, the U. S. economy would suffer slower growth, higher unemployment and more rapid inflation as a result of the proposed bill.

The Wharton study, which was funded by the Japanese Automobile Manufacturers Assn., also identifies the potential worldwide impacts of a U.S.-Japan trade dispute.

"Almost four million jobs could be lost in the developed countries by 1991 if protectionism became widespread," said Schink, a vice president at Wharton.

Local-content legislation was passed by the House during the last session of Congress and has been reintroduced this session.

The proposed bill would require foreign companies to meet certain domestic-content requirements, based upon the number of cars they sell in the U. S.

• "Local-content requirements would add as much as $800 to the average price of a new car by 1987," said Loxley, director of Wharton's Motor Vehicle Service. Prices of light trucks would also increase, he said.

The voluntary Japanese export limits have already caused an increase in U. S. car prices of $1,000 over the last two years, Loxley estimated.

Under a local-content law, actual employment gains in the U. S. auto industry would total only 22,000 workers in 1986, climbing to 58,000 by 1991, said Schink. However, employment losses in import auto dealerships and port facilities, could be at least 53,000 and U. S. export-based employment would fall substantially, causing a net loss of 365,000 jobs in 1991, he said.

Both economists warned that the ripple effects of the legislation cannot be discounted, asserting that the harmful effects of a U. S.-Japan trade dispute due to local-content legislation could easily spill over into other world economies, causing losses in income and jobs all around.

A chain of retaliatory protectionist moves by other developed countries would then cause lower economic growth and falloffs in the volume of world trade, they said.

They added that a trade war between the developed nations would also result in an exacerbation of the less-developed countries' trade balance problems, forcing further cutbacks in their already curtailed development plans.

California dealers must render some deals in Spanish

SAN FRANCISCO. — Steve Snow, executive vice president of the Northern California Motor Car Dealers Assn., has called the attention of members to a section of the California Civil Code which requires that if a credit sale of a vehicle is negotiated in Spanish, then the dealer must provide the buyer with a Spanish translation of the contract, if a contract is provided.

"The contract itself," Snow said, "should be in English. That is the document that would be enforceable in court. The Spanish-speaking customer, however, is entitled to a Spanish translation in addition to the copy of the English language contract and the translation must be accurate.

"What's more," Snow added, "a sign must be posted on the dealers' premises telling customers that Spanish translations of contracts are available."

If the customer uses his own interpreter who speaks English and Spanish, then the translation of the contract need not be made available by the dealer.

The law, Snow said, applies to leases as well as credit sales. The buyer has the right to rescind a purchase if the law is not followed.

GMAC names Robinson to human resources post

DETROIT.—Judith P. Robinson has been appointed to the newly created position of manager, human resources management for General Motors Acceptance Corp.

Robinson joined GMAC in 1959 and had been assistant director of personnel since 1977. James A. Halbert succeeds her in that post.

EPA pays renewed attention to standard for asbestos

WASHINGTON. — Asbestos work practice and equipment provisions have been proposed by EPA for reinstatement in the national emission standard for asbestos.

The standard will also be amended in an effort to enhance clarity, EPA said.

In 1978, the Supreme Court struck down non-emission standards promulgated under the Clean Air Act.

The law has since been amended specifically to allow the use of work practice standards in protecting air quality.

EPA said its proposed standards for asbestos should have little effect since many of the provisions are already being complied with and most businesses are trying to minimize asbestos emissions anyway.

Still, EPA views the standards as making clear its commitment to control asbestos emissions.

Work practice standards are necessary in the case of asbestos, where simply handling the material can often be a hazard to air quality.

But market penetration declines

Import registrations jump for June

Continued from Page 3

0.26 percentage points, Mercedes was up 0.06 percentage points in ninth place and BMW claimed 10th place, up 0.03 percentage points. Audi dropped from the top 10 this June.

Ten importers gobbled up 87.59 percent of the market for the month, down from 91.13 percent a year earlier.

For the first half of 1983, only Nissan and Volvo improved their portions of the import market compared with 1982 standings. Nissan was up 0.64 percentage points, to 20.43 percent from 19.79 percent, and Volvo claimed 3.65 percent, up 0.23 percentage points from 3.42 percent.

Toyota was down 2.56 percentage points, Honda was down 1.74 percentage points, Mazda was off 0.01 percentage points and Subaru was down 0.50 percentage points.

Volkswagen dropped 1.26 percentage points, Mercedes missed by 0.18 percentage points and BMW was off 0.06 percentage points. Renault Alliance joined the top 10 importers in its first year on the market, claiming the number seven spot and pushing Audi out of the upper echelons.

Ten imports represented 88.42 percent of the six-month market, down from 90.47 percent last year.

• Japan, of course, remained the major source of imported cars in the U. S., sending 72.24 percent of the total June import registrations into the country. It was down substantially from 78.63 percent for the same month a year earlier.

The United States category, comprised of cars with foreign ties but which are assembled in this country — Honda Accord, Volkswagen Rabbit sedan and Renault Alliance — was the second largest supplier at 10.03 percent, up from 3.94 percent a year ago. Germany was third with 9.26 percent compared with 9.27 percent in 1982.

Import totals from the various countries in June included:

	June, 1982	June, 1983
Japan	176,029	162,267
United States	24,445	8,140
West Germany	22,552	19,121
Sweden	12,714	9,554
France	5,166	4,573
Great Britain	1,620	981
Italy	1,044	1,402
Ireland	91	335
TOTAL	243,661	206,373

Registrations by country of origin for the first half of 1983 compared with the first half of 1982 were:

	6 mos., 1982	6 mos., 1983
Japan	920,944	839,895
West Germany	122,009	108,167
United States	119,801	47,921
Sweden	59,110	45,387
France	23,239	23,746
Great Britain	7,449	4,459
Italy	5,314	8,735
Ireland	345	1,720
TOTAL	1,258,211	1,080,030

Japanese cars represented 73.19 percent of the first-half import registrations, down from 77.77 percent in 1982. German cars dropped to 9.70 percent from 10.02 percent, and U. S. products climbed to 9.52 percent from 4.44 percent.

Registrations of new imported trucks ballooned 24.48 percent in June, to 41,101 from 33,017. The breakout by major manufacturer includes:

	June, 1982	June, 1983
Toyota	15,316	11,432
Nissan	11,369	7,020
Mazda	5,988	3,227
Dodge Ram 50	2,342	———
Volkswagen	.....	2,194
Others	6,086	9,144
TOTAL	41,101	33,017

First-half imported truck registrations were up 6.86 percent, to 216,978 from 203,055. Registrations by maker was as follows:

	6 mos., 1982	6 mos., 1983
Toyota	74,755	65,791
Nissan	56,419	44,717
Mazda	31,053	16,371
Dodge Ram 50	12,616	16,027
Others	42,135	60,149
TOTAL	216,978	203,055

Attorney sparring continues; DeLorean trial date in doubt

By Matt DeLorenzo
Los Angeles Reporter

LOS ANGELES. — Prosecution and defense attorneys in the DeLorean drug-trafficking case here continued to spar in pre-trial motions last week, making little headway toward the scheduled Oct. 4 trial date.

That trial date is not expected to hold in light of action pending before the Ninth Circuit in San Francisco, where a higher court is reviewing the trial judge's request for documents from a number of U. S. agencies, including the Drug Enforcement Agency, Central Intelligence Agency, the Pentagon's Defense Intelligence Agency and the National Security Council.

The defense for John Z. DeLorean is seeking documents from those sources to prove its claim that the government conspired with the British Government to force the former auto maker out of business.

Meanwhile, in Judge Robert M. Takasugi's court here, a motion was heard to hold an evidentiary hearing into the lawyer-client relationship of another DeLorean co-defendant, William M. Hetrick and his counsel, Stephen Wilson.

Hetrick changed his plea from innocent to guilty after striking a deal with the U. S. Attorney's office.

DeLorean's attorney, Howard Weitzman, in seeking the evidentiary hearing, charged that Wilson negotiated with the prosecution without notifying him and sharing information obtained by a private investigation firm working for DeLorean's and Hetrick's defense with the government.

Weitzman said, "Wilson has no credibility with me. Eyeball to eyeball on more than one occasion, he has lied to me" about the plea bargain.

"I would like to cross-examine him," Weitzman said.

Takasugi asked Weitzman to file an affadavit to that effect and scheduled a hearing on the matter for today (Sept. 12).

In other motions, the defense moved to have one of the charges against DeLorean, which involves the videotaped incidents of the former auto maker fondling a bag of cocaine, dismissed on the grounds that the conspiracy to possess and distribute the drug ended a day before DeLorean's capture with the arrest of his two co-conspirators, Hetrick and Stephen Arrington.

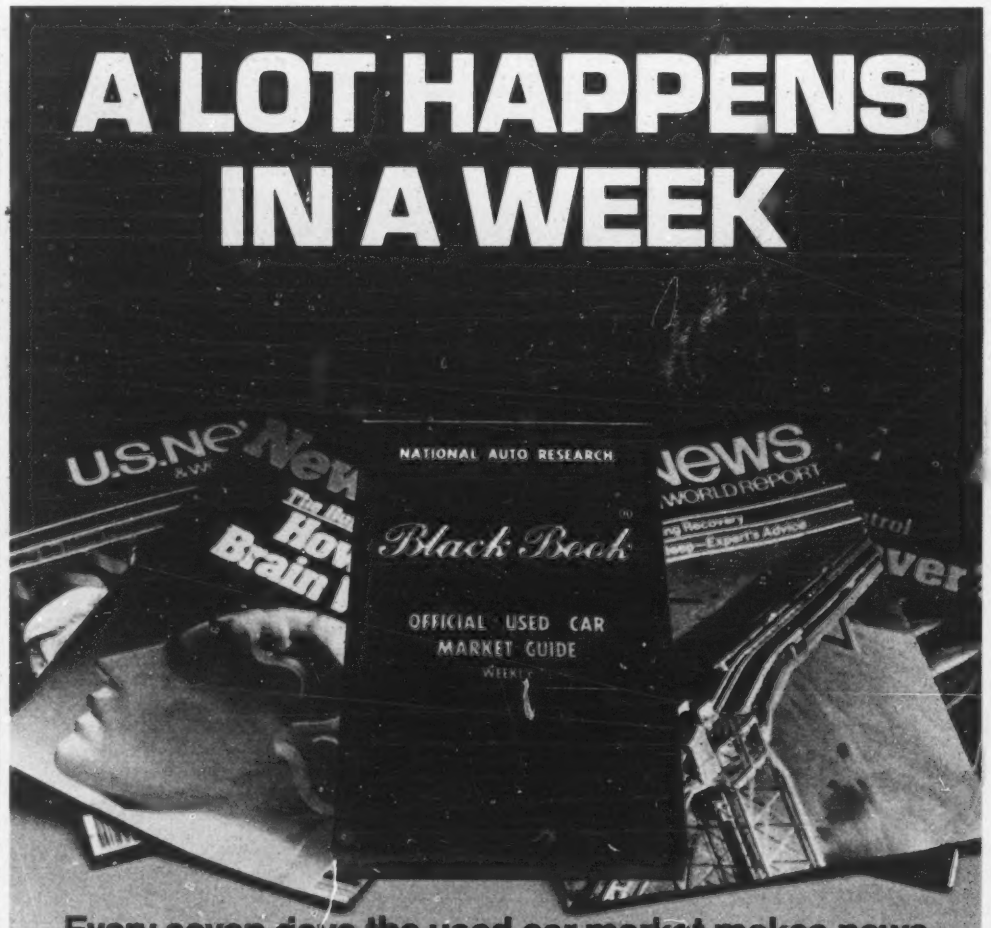
The videotape allegedly showing DeLorean with the cocaine was made on Oct. 19, 1982, the day of his arrest.

The prosecution argued that DeLorean flew to Los Angeles, without the knowledge of his co-conspirators' arrest, in furtherance of the drug deal and therefore the defense motion should be denied. Takasugi said he would rule on the motion later.

Motions to dismiss three other counts in the case were denied by the judge as was a motion to question prospective jurors individually in chambers. The jurors will be questioned individually in court and the number of pre-emptory challenges has been increased by Takasugi.

Navas named

WASHINGTON. — Albert M. Navas has been named president of the American National Metric Council. He has been with Arthur Andersen & Co. since 1979.



Every seven days the used car market makes news.

In this business, what you don't know can hurt you. Using outdated, inaccurate figures can put you in a bind of under-evaluation or over-evaluation. That's why Black Book is carried in the pocket of 50,000 people who depend on it for Timely, Current and Accurate information. Each week you get an updated report that shows current market prices in four appraised conditions: Extra Clean, Clean, Average and Rough. These figures are actual sale prices recorded by professional reporters from major auctions, then tabulated with computer precision and delivered within the 7 day period.

This handy guide is checked and rechecked for accuracy, because we know your business depends on us, and we know that a lot happens every week that can affect your profits.

Black Book provides the most complete retail and wholesale coverage available today. You'll also find Black Book guides for the old car market, imports, lease vehicles and specialty vehicles to help you keep up with all the latest news.

Europeans face intense competition

Continued from Page 1

Germany's auto makers have 12 percent in the 1983-1985 period. Exports to the U. S. have helped the European car makers considerably, Lawson said.

The Japanese share of the European markets is expected to decline for several years, both because of competition from European cars and because of policital reasons, Lawson said.

"The Europeans probably have got things together enough now to fight back," he said, pointing to the Dutch market where the Japanese import share has fallen in the second half of the year.

Still, the Japanese will be taking an estimated 23.5 percent of the market there this year, and that is low compared with some of the unrestricted European markets. They are probably bearing the brunt of shrunken worldwide export markets open to the Japanese, Lawson said.

Denmark, Switzerland, Austria and Finland are likely to see some decreases in the Japanese share in the next few years, according to the Automotive News World Outlook. But a small rebound in the Japanese share is expected late in the decade throughout Europe.

West Germany's 1983 sales promise to be significantly higher than what were expected only three months ago. Car registrations are now expected to be 11 percent higher than in 1982, light-truck registrations to be 9 percent higher and medium and heavy-truck registrations to climb 16 percent.

The nation's post-election recovery was heightened by the maturity of five-year savings deposit certificates which citizens began cashing in late 1982 and continued to cash in early 1983 in order to buy major durable goods.

The recovery is expected to continue next year in Germany — as evidenced by forecasts of increased truck sales — although auto sales are expected to remain fairly flat, because been successful in their North American exports and because the North American market is expected to continue to grow in the medium term, Germany's auto industry should fare well despite its flat home market.

• Similarly, Renault's exports to American Motors should help offset a weakening economy that is expected to plague France through 1985.

Reflecting the economy, the French truck market is expected to run counter to that in the rest of Europe during the 1983-1985 period, declining 13 percent this year and another 2 percent next year before rising in 1985 to a level that is still below the decade's trend line.

Even with the expansion expected in the rest of Europe's truck markets, only vans are expected to surpass the 1979 peak levels, according to Jeremy Blackford, economist for DRI Europe Truck Division.

Terming Europe's truck market growth for the rest of the forecast period "less than euphoric," Blackford said incentives by all makes in Germany this year inflated the sales total there, much like was done in Britain's car market.

"I don't think it can continue for the rest of the year," he said.

Increases in auto production throughout Europe will just keep pace with the growth in the European market: Two percent on average through 1988, with the big increases coming this year (6 percent) and next (11 percent).

France is expected to record a 5-percent increase in auto output this year but to average only 1 percent annual growth through 1988—and those French production figures include what Renault considers CKD kits to American Motors in the form of Alliances and Encores.

Italy will average 3 percent growth in car production a year, with the big increases this year (9 percent) and next (6 percent).

The most impressive European gains are expected from Spain, which is expected to increase car output 11 percent this year to 1.04 million units, 10 percent next year to 1.14 million units and to average 5.5 percent annual growth through 1988.

UK production will match the European average for the whole period, but only because of this year's 14-percent gain to 1.01 million cars.

Deflates cd

The objective of Ford Motor Co.'s Probe IV car project is reduction in coefficient of drag (cd). Goodyear Tire & Rubber Co. contributes this aerodynamic tire. It's a narrow, high-pressure radial with elliptical sidewalls.

Cadillac sees sales gain to 330,000 for '84 models

By Richard A. Wright
Assistant Managing Editor

DETROIT. — Cadillac anticipates a hefty sales increase for 1984 and most of the gain will come out of the hides of the luxury import lines, according to Robert D. Burger, Cadillac general manager.

"We are projecting 1984 model year sales of 330,000 cars, up 12.4 percent from 1983," Burger told reporters at the press preview of the division's 1984 models.

With the new front-drive C-body delayed until "sometime after the first of the year," Cadillac had little new in the way of product except for the Eldorado convertible. And the projected sales of 3,000 for the convertible are not enough to account for the anticipated increase of 36,300 units.

Burger explained the increase as a matter of Cadillac taking a somewhat larger share of a bigger luxury-car market in 1984.

Burger predicted that U. S. sales would total about 10 million for 1984 and that the luxury segment would account for about 10.5 percent of that total, or about 1,050,000 units. "That's up from projected luxury car sales of 960,000 units in the 1983 model year," he said.

Burger said Cadillac sales have made a strong showing this year. In the first eight months of this calendar year, he said, Cimarron sales are up 62.5 percent, Seville sales are up 44 percent, Eldorado up 24.7 percent and DeVille-Fleetwood sales are up 21.6 percent.

In a question-and-answer session, Burger conceded that dealers have urged continuing of the current rear-drive C bodies, but stressed that these considerations have nothing to do with the delay in the introduction of the new, smaller front-drive C-bodies.

The car is being delayed because of transmission problems and other difficulties. He said if the new C-body is ready by spring, the current rear-drive models might be built through the model year.

Questioned about the oft-rumored "$50,000 Cadillac" said to be in the works to compete more directly with Mercedes-Benz, Burger said only that "we are thinking about it . . . we are thinking about a lot of things."

One thing Cadillac is not thinking about, he said in response to another question, is a Cimarron convertible.

Chevrolet shows Citation IV, a car for the '90s

Continued from Page 2

extended, crisply terminated rear deck.

Unlike the show car, however, Citation IV has open wheel housings, wider tires, exposed windshield wipers and mirrors.

The drag coefficient of Citation IV in operating trim is targeted in the .18 range. Chevrolet said such a cd would produce 61 percent less air drag than current production Citations and account for energy savings equivalent to a 20-MPG increase in highway mileage.

The division said a Chevrolet engineering design staff team is responsible for the electronics, materials and packaging technology brought in Citation IV.

Computer-controlled, touch-activated combination locks built into the car's fiberglass skin open the doors. There are no door handles.

Seats are thin-mold urethane.

Instrumentation is all digital with provisions for reflecting speedometer readings off the inside of a windshield inclined only 32 degrees from horizontal (flatter by almost 10 percent than the angle of the production Chevrolet with today's most radical windshield — the new Corvette).

Computers sense road speed and adjust electrically assisted, variable-rate rack-and-pinion steering.

Brakes are also electrically activated.

Imports gain 5 pct. for month

August domestic sales up 29 pct.

Continued from Page 2

was 6,111,014, up 15.87 percent from 5,274,009.

In August, General Motors dealers retailed 318,004 new cars, up 24.74 percent from 254,937 in 1982. Ford Motor Co. sales of 121,162 were up 32.14 percent from 91,690.

Chrysler Corp. reported a sales increase of 33.29 percent, climbing to 64,518 from 48,405. Chrysler said it was the 12th month in a row that sales of its domestic cars exceeded year-ago levels.

American Motors sales more than doubled August to August, climbing to 13,833 from 5,807. Volkswagen was off 11.60 percent, to 7,578 from 8,572, and Honda Accords from Marysville, O., added to 5,865 for their first August on the charts.

GM earned 59.89 percent of the August market, down from 62.27 percent last year. Ford edged up to 22.82 percent from 22.40 percent. Chrysler pushed to 12.15 percent from 11.82 percent. AMC sales accounted for 2.61 percent of the domestic market, up from 1.42 percent. VW dropped to 1.43 percent from 2.09 percent, and Honda absorbed the remaining 1.10 percent of the August, 1983, domestic market.

Of the domestic makes, only Imperial, VW and AMC (without Alliance) were down for the month. Imperial dropped 15.91 percent, VW was off 11.60 percent and AMC tumbled 62.27 percent.

Plymouth was up 13.84 percent, Chrysler was up 65.89 percent and Dodge was up 27.52 percent. Ford sales climbed 30.87 percent, Mercury was up 27.75 percent and Lincoln was up 66.08 percent.

Buick sales were up 28.08 percent, Cadillac was up 26.73 percent, Chevrolet was up 14.11 percent, Oldsmobile was up 39.31 percent and Pontiac was 25.93 percent ahead of August, 1982, sales.

• Import companies setting records for the month included Jaguar, Saab, BMW, Mercedes-Benz and Volvo. Jaguar sales were up 38.03 percent over 1982, Saab was up 18.38 percent, BMW was up 39.76 percent, Mercedes was up 27.23 percent and Volvo was up 13.21 percent.

Toyota sales were 50,321 in August, 1983, compared with 50,607 a year earlier, while Nissan expanded to 47,451 from 39,283, a 20.79-percent increase. Honda import sales were off 14.94 percent, Mazda was down 4.12 percent and Subaru was up 13.58 percent.

The market class breakout showed imports with the largest single piece of the total, 28.26 percent. They were followed by U. S. intermediates at 26.56 percent, compacts at 16.11 percent, standards at 12.41 percent, subcompacts at 11.15 percent and luxury models at 5.51 percent.

In the domestic-only market, intermediates accounted for 37.01 percent, compacts had 22.46 percent, standards had 17.30 percent, subcompacts had 15.55 percent and luxury cars claimed 7.68 percent.

Aug. 21-31 domestic sales totaled 191,170, up 15.50 percent from 165,509 a year earlier. In 1981, late-August sales added to 245,608 and in 1980 they were 195,454.

The daily-selling rate for Aug. 21-31 was 21,241 this year compared with 18,390 in 1982. There were nine days in the period both years.

Annualized domestic sales based on late-August results were moving at a rate of 6,341,000 for 1983.

For the period, GM was up 10.04 percent, Ford was up 18.45 percent, Chrysler was up 18.91 percent, American Motors was up 108.63 percent, VW was unchanged and Honda sales were 1,877.

GM earned 58.64 percent of the domestic market, Ford had 23.81 percent, Chrysler claimed 11.59 percent, AMC had 2.95 percent, VW earned 2.03 percent and Honda held 0.98 percent.

Chevy expects '84 car sales of 1.5 million

By Marjorie Sorge

WARREN, Mich. — Chevrolet will sell 1.5 million cars and 1.2 million trucks in the 1984 model year, up from 1.3 million cars and 900,000 trucks in the 1983 model year, according to Robert C. Stempel, division general manager.

Stempel said that the industry could look for 10 million or more car sales in the 1984 model year.

As for its own sales, Chevrolet predicts: 285,000 Celebrities, up 86.3 percent over 1983; 250,000 Chevrolets, up 8.7 percent; 190,000 Camaros, up 6.1 percent; 134,000 Monte Carlos, up 36.7 percent; 350,000 Cavaliers, up 60.6 percent; 180,000 Chevettes, down 1.1 percent; 90,000 Citation IIs, down 23.1 percent, and 35,000 Corvettes, up 34.6 percent.

The Cavalier figure includes 7,000 convertibles.

More 1984 sales predictions from the division are: 215,000 S-10 pickup trucks, up 16.8 percent; 125,000 S-10 Blazers, up 58.2 percent; 402,000 standard pickups, up 13.9 percent; 44,000 standard Blazers, up 83.3 percent; 43,000 Suburbans, up 26.5 percent; 185,000 Chevy vans and Sportvans, up 26.7 percent, and 25,000 El Caminos, up 11.1 percent, and 36,000 motor home chassis and other types of vans.

Stempel said that the GM ventures with Isuzu, Suzuki and Toyota are moving ahead. He said that the Toyota venture is moving along mechanically and technically regardless of threatened lawsuits from some "spoiled sport" domestic companies.

Stempel also said that there is currently a 30-week backlog on the 1984 Corvette which means waiting time for customers. He said the division is "going to see what the staying power is before adding a second shift" at the Corvette plant.

Makers build 484,081, up 36 pct. over 1982

August car output best since 1978

By Mary Beth Mayer
Staff Writer

The domestic auto makers' August production total was the highest for that month since 1978.

At 484,081, output for the month was 36.88 percent above the 353,656 units completed in the year-ago month and beat all August totals since 512,073 units were finished five years ago.

Car production dipped 10.68 last week as all plants were closed Monday (Sept. 5) for the Labor Day holiday. Thirteen assembly facilities posted overtime.

Last week's output is estimated at 125,455, down from 140,445 units built last week, but 34.32 percent over 93,405 completed in the year-ago week.

So far this year, 4,458,805 cars have been assembled, a 23.27 percent gain over the 3,617,286 units finished in the comparable 1982 period.

Breakdown for the week by companies was: General Motors, 59.93 percent; Ford Motor Co., 20.10 percent; Chrysler Corp., 14.95 percent; American Motors, 2.87 percent; Volkswagen of America, 1.50 percent, and Honda, 0.65 percent.

Honda's production was low last week due to model changeover.

Five GM plants worked two shifts of overtime on Saturday, Sept. 10. Working Saturday were: Detroit, Fairfax, Flint (B and G lines), Lansing (B and C lines) and Pontiac.

Ford also had five plants on overtime last week. Those plants were: Chicago, Kansas City, Lorain, St. Louis and Wayne. All worked daily overtime except Kansas City, which also worked Saturday.

Three Chrysler plants, Belvidere, Jefferson and Newark, logged two daily nine-hour shifts last week.

Closing this week due to a materials shortage are GM's Norwood and Van Nuys plants. Both are slated to be back to work next Monday, Sept. 19.

Judge denies local's attempt to restrict GM-Toyota plan

By Marjorie Sorge
Labor Editor

A federal district judge in San Francisco has denied a request for a temporary restraining order by some UAW members to stop officials of the General Motors-Toyota joint venture and the UAW from reaching any labor agreement involving the production of a car at the idle GM Fremont (Calif.) assembly plant unless the members of the local are allowed to vote on the pact.

However, Judge Spencer Williams has scheduled a hearing on a preliminary injunction for Thursday (Sept. 15).

GM and Toyota are planning to build a car at Fremont if their joint venture is approved by the Federal Trade Commission. The former Fremont workers have been worried that they will not be recalled if the plant does reopen. It has been closed since March, 1982.

The suit, filed by members of UAW Local 1364, also claims that the UAW revoked its charter illegally on July 25 and that the revocation is part of a conspiracy with GM and Toyota to stop the former Fremont workers from having a voice in the labor agreement.

A UAW spokesman said it is standard operating procedure to revoke the charter of a local representing a defunct plant. He said it is the international's belief that the local did not exhaust all the internal union avenues such as the International Executive Board and the Review Board.

GM had no comment on the suit.

82 pct. of vehicles tested pass Mass. inspections

BOSTON.—In April and May, the first two months of the newly implemented Massachusetts combined motor vehicle tailpipe emissions and safety inspection, some 82 percent of the vehicles tested passed on their first try.

The Massachusetts State Department of Environmental Quality Engineering and the State Registry of Motor Vehicles found that there was a 12 percent failure rate on the test's emissions phase and an 8 percent failure rate on the safety portion.

Truck production for August hits five-year high

August truck output reached 197,741, a 38.70 percent leap from 142,571 units built in the year-ago period and the best August total since 278,378 units were finished in that month in 1978.

Truck production for last week's four working days was targeted at 45,000, down 3.14 percent from 46,457 built the previous week, but a 39.73 percent gain over 32,205 assembled in the year-ago period.

Year-to-date, the manufacturers have produced 1,547,899 units, up 11.36 percent from 1,390,081 units built at this time last year.

General Motors' St. Louis truck point posted Saturday overtime last week.

Also working extra hours last week were Ford Motor Co.'s Louisville, Norfolk and Twin Cities facilities. All three plants put in daily overtime, and Louisville also worked Saturday.

Chrysler Corp.'s Warren point logged daily overtime last week.

Canada builds 40,200 trucks for August record

In August, Canadian truck makers assembled 40,200 units, an alltime high for the month.

The total was 7.97 percent above the 37,235 built in August of last year, the previous record, and 64.63 percent greater than the 24,419 trucks completed in July of this year.

Last week, the truck manufacturers worked only four days due to a holiday and scheduled 10,720 units, down 7.24 percent from 11,585 built the week before, and up 20.77 percent from 8,889 finished in the year-ago week.

Year-to-date, 355,469 trucks have been completed, down 1.84 percent from 362,115 finished in the year-ago period.

At 56,104, auto production in Canada last month was down 15.96 percent from 66,758 assembled in the year-ago month, but up 16.42 percent from 48,193 built in July. August was the second lowest month for car production so far this year.

The makers estimated car production during holiday-shortened last week at 14,680, 10.30 percent behind 16,364 assembled the previous week and 17.56 percent down from 17,805 built in the year-ago week.

So far this year, 664,243 cars have been assembled, up 6.81 percent from 621,898 completed in the year-ago period.

Chrysler Corp.'s Windsor car facility is retooling for the T-115 van/wagon, which it will begin to produce in early October.

Ford Motor Co.'s St. Thomas car point is slated to go down today for four weeks of tooling changes to add production of full-size cars to the Escort/Lynx subcompact cars already built there.

429 **They went thataway** What happened to some of those early acquisitions by GM?

432 **What went wrong?** Even giants stub their toes now and then

Over there!

By Richard Feast

GM Continental began assembling U.S. products in a deconsecrated 16th Century abbey in Belgium in 1924, Vauxhall of England became GM's first overseas manufacturing operation in 1925 and Opel entered the fold four years later. Today GM has manufacturing, assembly, distribution or warehousing activities in 35 countries outside the U.S. and Canada.

General Motors first explored the worldwide automotive market in 1911 when the General Motors Export Co. was formed. Its U. S.-made products had some success overseas into the 1920s, but it became clear during that decade that American cars were growing too large to compete effectively abroad where lower income levels, shorter driving distances and higher fuel costs encouraged smaller cars.

Three courses were open to GM if it wished to remain in international enterprise. First, it could continue to export American-style cars in the face of declining demand. Second, it could build a car in the U. S. that would better suit overseas customers — one which would not, however, be widely accepted in its home country and which still would have to hurdle transportation and tariff barriers. Third, GM could — as it decided to do — build cars and trucks overseas to meet overseas customer requirements.

The final choice required greater investment and greater risk, but also promised greater success. On December 31, 1925 Vauxhall Motors Ltd., a small concern in Luton, England, became a GM subsidiary. With an annual output of some 1,500 cars, Vauxhall was GM's first overseas manufacturing concern.

In March, 1929 Adam Opel AG became GM's German manufacturing subsidiary and the second firm to join GM's overseas operations. At the invitation of the Australian government, GM moved after World War II to develop its existing assembly and body manufacturing facilities in that country into a full automobile manufacturing company. The first mass-produced Australian car, the Holden, was produced by General

Crates of Chevrolet parts shipped from the U.S. are picked up at the harbor in Antwerp, Belgium, for delivery to the nearby GM Continental assembly plant. The year is 1925.

Motors Holden's Ltd. in December 1948.

The fourth addition to the ranks of GM manufacturers abroad was General Motors SA, which had been assembling imported vehicles in Brazil since 1925. It gradually added manufacturing capabilities until 1959 when, with a new foundry and engine plant, it began full manufacture of Chevrolet commercial vehicles.

Today GM has manufacturing, assembly, distribution or warehousing operations in 35 countries outside the U.S. and Canada. Countries in which GM subsidiaries have manufacturing and/or assembly plants include Australia, Austria, Belgium, Brazil, Chile, France, Germany, Greece, Ireland, Luxembourg, Mexico, the Netherlands, New Zealand, Portugal, Singapore, South Africa, Spain, the United Kingdom, Uruguay, Venezuela and Zaire. Subsidiaries in Denmark, Finland, Italy, Norway, Sweden and Switzerland import GM products. GM also has joint venture arrangements in Colombia, Iran, Japan, Kenya, Korea, Mexico, the Philippines, Spain, Taiwan, Venezuela and Yugoslavia for the manufacture of components and vehicles.

Until 1978 General Motors Overseas Operations was a separate division within the GM organization. The division and the subsidiary companies reporting to GMOO had the responsibility for designing, engineering, manufacturing, selling and servicing GM automotive products outside the U.S. and Mexico.

A situation similar to the one faced in the 1920s confronted GM as the world automotive market once again underwent major changes in the 1970s. A General Motors Overseas Group was formed and the staff functions of the former GMOO were integrated in September, 1978 into those of the U.S. operations to effect closer management coordination between North American and overseas operations.

At the dedication of a GM assembly plant near Lisbon in September, 1963, members of the Portuguese government and local dignitaries are received by GM president John Gordon, fourth from left in front, and other company officials.

This new relationship between the staff functions concerned the design, engineering, sales and servicing of cars and trucks. It is achieving a greater efficiency and has enabled GM to move into the '80s with a new outlook on the world automotive market.

Today Opel coordinates European passenger car design and manufacturing with support from Vauxhall, General Motors Continental in Belgium and the new General Motors Espana in Spain. Bedford, the commercial vehicle company established within Vauxhall in 1931, is part of GM's World Truck and Bus Group.

The days of U.S. vehicle assembly in Europe are long past. Today the designs of Opel dominate. In the commercial vehicle field even the influence of the Japanese is being felt because Bedford will produce light vans designed by Isuzu Motors Ltd., in which GM has a 34.2-percent interest.

Small national plants have by and large gone. The breakdown in import tariffs and spread of European cooperation in the postwar years rendered them less desirable and uneconomic

General Motors Suisse SA began assembly in 1936 at Bienne. It ceased in 1975 in the aftermath of the first oil crisis. A year earlier the Danish operation in Copenhagen closed. It had been GM's first European venture (1923), exporting to Baltic countries and Soviet Russia in the 1930s.

Indeed, during the 1930s the Danish operation had a subassembly plant in the Polish capital of Warsaw. It ceased operation in 1938.

GM Continental has survived as almost a satellite plant to Opel's German factories. The Berlin factory was taken after the war — wash room fittings, window frames and all and reassembled in the Urals.

The last remaining "old-style" GM operation is at Lisbon, Portugal, where GM de Portugal Ltd. employs around 1,100 people and assembles Bedford light trucks and Opel cars, mainly for the Portuguese market. The future of the plant is in doubt due to Portugal's expected membership in the European Community within two years.

Auto companies think less in national than in continental terms these days. Europe is considered as one market, by and large, and to meet market demands there requires huge factories turning out huge volumes of vehicles. GM Espana's Zaragoza factory is an example. Its annual output of 270,000 units of just one model is sent to all European national markets.

GM is the world's largest manufacturer of automotive components, and its European presence as a parts producer is strong, supplying not only Opel, Vauxhall and Bedford, but also other auto makers. GM component plants in Europe employ around 20,000 people. Each plant is affiliated with a GM component division based in the U.S. Most recent additions are at Vienna, Austria (engines and transmissions); Cadiz and La Rioja, Spain, and Portugal's Ponte de Sol and Linho-Sintra. They were part of the Spanish Scar (Corsa) project unveiled in 1982.

GM also operates 17 other plants in Europe: Gennevilliers, Donchery, Sarreguemines and Strasbourg in France; Hendon, Dunstable, Southampton and Liverpool, England; near Dublin, Ireland; Dundonald and Belfast, Northern Ireland; Carnaxide in Portugal; and five Kabelwerke Reinshagen plants in the Federal Republic of Germany. GM is also a 40 percent partner in Industrija Delova Automobilia (located in Kikinda, Yugoslavia) which produces iron castings and automotive components. □

Europe's obscure Continental

A hidden gem sparkles in Antwerp

General Motors Continental may be the corporation's most overlooked asset in Europe. Its anonymity is hidden in the fact that its products carry the names of Opel and Vauxhall, although the connection is indirect.

GM Continental was established before either Adam Opel AG or Vauxhall Motors Ltd. were acquired by GM. It was established in the Belgian port of Antwerp in 1924, a year before Vauxhall and five years before Opel joined the GM fold.

Today it is a more significant producer than Vauxhall, though it does not match the volumes of Opel, with a capacity of 400,000. However, Continental theoretically could turn out more cars than the GM plant which has been the subject of so much attention in Europe recently, the Corsa factory in Spain.

GM Continental had odd beginnings. It began assembling U.S. products in a deconsecrated 16th century abbey in 1924. Volume was around 1,800 annually and employment was 500. It was clear that the facilities were inadequate, and in 1926 production was transferred to another Antwerp location, the former velodrome or cycle racing track.

By the following year output was up to 7,500 units, not just for the domestic market. Antwerp-made U.S. models found their way to other parts of Europe and the Middle East.

Continuing strong demand, and the awkwardness of transporting components and cars to and from the velodrome and dock, prompted GM Continental to seek its third home within five years; completion of new sea locks was a factor which led GM to its Albert Dock location in 1929.

GM Continental production in 1929 was 24,000 cars, and employment was 2,200. While GM survived the Wall Street crash, the echoes were felt around the world. The depression which followed saw GM Continental's output reduced to 15,000 and employment cut by half.

Production and employment gradually picked up during the 1930s. But Europe was rushing towards catastrophe, and by 1940 German troops occupied Antwerp. Under German supervision the plant was commandeered to repair army vehicles. But by September of that year Allied bombers were hitting GM Continental. It culminated in total destruction in 1943.

After liberation by the Canadian army in 1944, it was obvious that the dock site could not be used for production. Instead, GM returned to the old velodrome, and in 1946 more than 2,000 vehicles were delivered.

By May, 1950 the 50,000th postwar vehicle was produced at the velodrome. More importantly, a site for a modern, larger assembly plant was chosen. It was to be in northern Antwerp, close to the harbor docks. The first vehicle off the line, in August, 1953 was a Chevrolet truck. The plant covered an area of 43.8 acres on a 62.5 acre site. It had five miles of assembly lines. Even so, it was soon obvious that another factory would be required.

It all started at this 16th century former abbey in Belgium in 1924.

The figures show solid volume growth. In 1954, the first full year of production at the new factory, output was 30,500. By 1966, the year before the second factory was opened, it was 62,400.

Completion of Plant 2, began in 1965 and completed two years later, provided GM Continental with substantial volume increases. Whereas the original plant had a capacity of 45 cars a day, Plant 2's output was 75 a day.

Plant 2 covered 325 acres, 55 of which were floor area. The assembly line length stretched to 16.25 miles. It is located six miles to the north of Plant 1, and today employs some 7,000 people. Plant 2's payroll stands at 5,000.

Plant 2 was soon producing more than 200,000 units annually (in 1971), but the 1974-75 European sales de-

cline caused volume to slide. As demand picked up in the second half of the 1970s, though, total GM Continental output surged. It exceeded 300,000 for the first time in 1976, and has topped that each year since. Last year, when GM Continental's five millionth vehicle was produced, the output stood at 355,600.

A $195 million investment during 1980-81 brought modernization and a new paint shop in Plant 1 and automated body assembly, fuel tank assembly and engine dress-up in Plant 2. An additional $88 million program will be completed in 1984. It includes building separate rustproofing facilities, installation of more highly automated assembly equipment and implementation of modular assembly technology applied to car interiors.

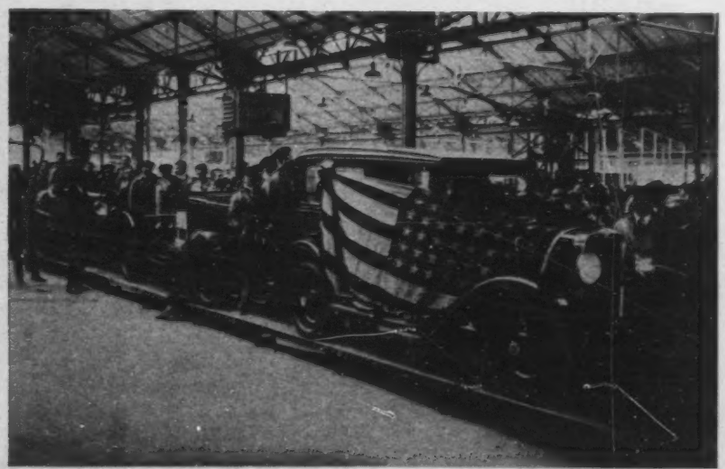
*Opening of Plant 2.

Ninety-five percent of the company's output — Asconas, Mantas and Vauxhall Cavaliers in Plant 1 and Kadett and Asconas in Plant 2—are exported. □

The cushion assembly department workers line up to attend an open house event at the new Albert Dock factory in 1929.



The first car, decked in an American flag, leaves the new Albert Dock assembly line in 1929.

GM's first overseas car maker

The U.S. company wanted Austin, got Vauxhall

Vauxhall Motors, Ltd., a small concern in Luton, England, became General Motors' first overseas manufacturing acquisition on December 31, 1925.

What GM really wanted at the time was to buy Herbert Austin's Austin Motor Co., Ltd. By United Kingdom standards Austin was a substantial producer, building 12,000 cars a year. More importantly, Austin was in the high-volume part of the market, in competition with Morris, Ford, Hillman and Standard.

In contrast Vauxhall was producing 1,500 cars a year, and selling nothing for less than 500 pounds, triple the going rate for a popular car.

Austin rejected GM's overtures, however, and the American company turned to Vauxhall in 1925, after GM had established its own assembly operations in Belgium and four years before GM turned its attention to Europe's leading industrial producer, Germany, where it acquired Adam Opel in 1929.

GM's European expansion plans were nearly launched much earlier. Alfred P. Sloan, in his book "My Years with General Motors," writes of the several weeks in the middle of 1919 when GM agonized over whether to buy the Citroen auto company of France. It didn't, and to this day GM's manufacturing presence in France is restricted to component plants.

What GM acquired in Vauxhall was a company whose products stood among the best in Europe. Wealthy motoring enthusiasts drooled over Vauxhall's Prince Henry and 30/98 models in the same way they did Rolls-Royces, Sunbeams and Bentleys.

GM was to change things, though it took five years for the results to become apparent. Vauxhall began 1930 by producing only one model, the T-type Silent 80 costing up to 750 pounds. When the year ended its price was below 300 pounds.

Production at the Luton factory 35 miles northwest of London averaged less than 1,600 annually during the first five years of GM ownership. With arrival of the Cadet, average output for the next five years shot to more than 7,400, and in the five years up to the start of the Second World War (1939) the average was 27,400.

If Cadet was a sharply priced winner, its successor was even more so. The Light Six, launched in 1933, cost as little as 195 pounds. By the end of that year the Big Six priced at 325 pounds, was introduced.

Vauxhall Motors was growing rapidly. At the end of the 1920s it employed a labor force of 1,500 and occupied 12 acres. By the mid-1930s there were 6,000 workers and annual sales topped 7 million pounds. Vauxhall was firmly part of Britain's Big Six auto makers, along with Austin, Morris Garages, Ford Motor Co., Rootes and Standard.

GM had bought Vauxhall for 2.5 million pounds and completely altered the English company's business philosophy. Part of the radical change in direction involved establishing a commercial vehicle line under the Bedford name.

Vauxhall's first trucks were locally assembled Chevrolets. In 1931 the first Bedfords began to appear, and for the rest of the decade annual production did not drop below 10,500 and averaged 20,300.

The move into commercial vehicle production epitomized Vauxhall's complete change in direction. During World War I the company had made small numbers of expensive cars for use by military staff officers. In World War II Vauxhall produced 250,000 trucks, 5,000 Churchill tanks, other armaments and 5 million jerry cans.

In 1938 Vauxhall created a first for a British car maker. Its 10-horsepower H-series adopted chassis-less unitized construction that since has become commonplace in automobiles. The system, however, had already been used by Adam Opel in Germany, a later recruit to the GM fold.

Some 10,000 of the 10s were sold in five months, a handsome return on a one million pounds investment. A larger, 12-horsepower model was added later, and but for the war clouds gathering in Europe, Vauxhall probably would have overtaken Standard in popularity.

The decision to go to unitized construction may have had its drawbacks at the time, such as a greater possibility of rusting and an inflexibility of body choice. But when car production resumed after the war, the atmosphere of economic hardship left Vauxhall with a small, rationalized range.

• The pre-war models were ideal launching pads for rebuilding the company. Emphasis was on export, and the UK market was starved of cars in order to earn vital foreign exchange.

It was not until 1948 that the L-type Wyvern and Velox replaced the pre-war cars. They carried on until the early 1950s, but filled the gap until the more modern shapes, inspired by Detroit, began to appear.

Luton continued producing cars and trucks, and as demand grew so did the requirement for more manufacturing space. A major expansion program began in 1948 at a cost of 14 million pounds. Two years later the new 19.5 acre building was in use, but even

What exactly is a Vauxhall?

Adam Opel's family name is reflected in the name of the German auto company he founded. But Vauxhall's origins began with a gentleman called Alexander Wilson.

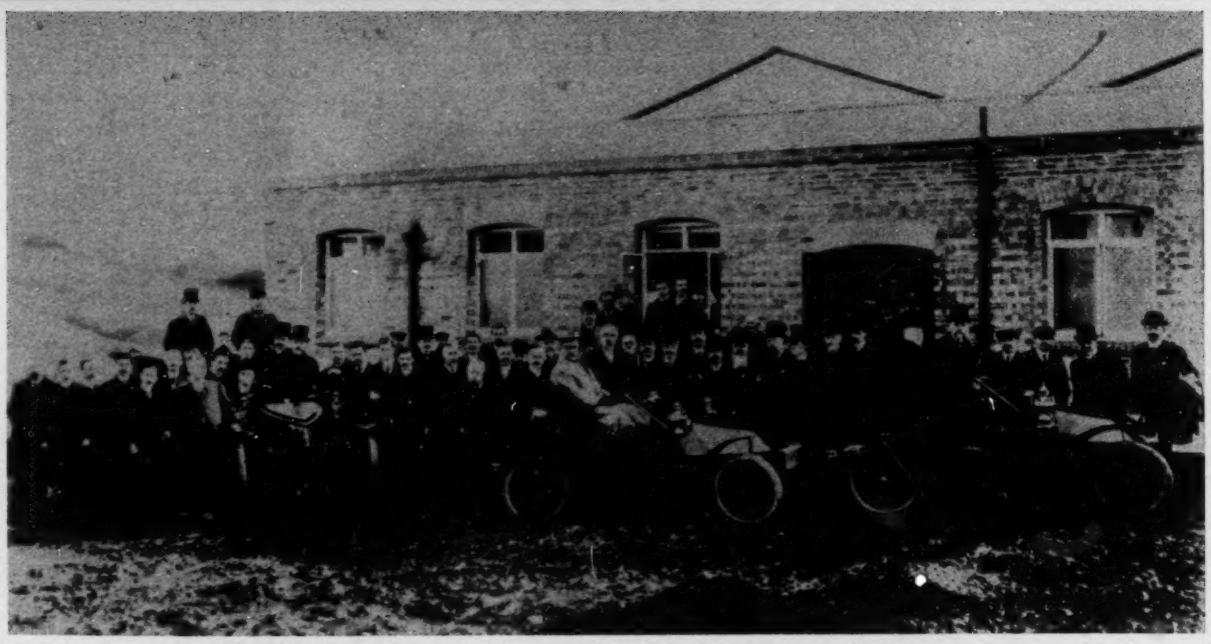
Wilson's 19th century iron works was in a suburb of London known as Vauxhall. The name derives from a seedy Plantagenet mercenary soldier of humble birth known as Fulk le Breant.

After achieving a few dirty deeds for King John (1166-1216), the ambitious le Breant was made sheriff of Oxford and Hertford, and granted the manor of Luton. Through marriage he acquired a house and grounds south of the River Thames. It became known as Fulk's Hall and, by corruption over many generations, Vauxhall.

It was Fulk le Breant's griffin emblem — half eagle, half lion — that Alexander Wilson adopted for his iron works badge.

It was pure coincidence that the Vauxhall company's move from the Vauxhall area to Luton in 1905 should have been to a place that had 13th century associations with Fulk le Breant.

Le Breant met a sad end. Following the death of King "Magna Carta" John, the unpopular le Breant returned to his native Normandy where he died a pauper.



In 1905 Vauxhall Motors moved from London to its new home in Luton (photos above).

this would shortly prove inadequate to keep pace with demand.

E-types replaced the L-types in 1951, using the same names and later adding a Cresta model. The shape, a miniature version of an American car rather than distinctly European, was produced until 1957; by then 342,000 had been sold.

The year 1953 was an historic one for the company. To celebrate its golden jubilee, Vauxhall output topped 100,000 for the first time and the company produced its one millionth vehicle. By 1953 Luton covered 80 acres and employed more than 13,000.

That year also marked the retirement of Sir Charles Bartlett, managing director of Vauxhall since September, 1930. Bartlett joined GM in London in 1921. He was transferred later to Luton to look after the company's new acquisition, and became managing director in 1930. The company he joined had had a payroll of 2,700 and made 8,000 vehicles a year.

During Bartlett's reign there were no labor "strikes" for 20 years. There were, however, "pauses for consultation." Bartlett was knighted in 1944 for Vauxhall's war efforts.

In 1954 Vauxhall embarked on a further expansion program, to build a new production center for cars and transfer Bedford truck production to a separate plant at nearby Dunstable. Its cost was 36 million pounds.

Five years later Vauxhall's two millionth vehicle was produced, and the Ellesmere Port project was announced. Ellesmere Port, part of a government promotion to persuade the motor vehicle industry to relocate into economically weak areas, began production in 1963. The same trend saw Ford moving to Halewood (also in Merseyside) and Rootes moving to Linwood, near Glasgow.

Throughout the 1960s, as Britain's economy grew, demand for cars and commercial vehicles was buoyant. Vauxhall was a consistently positive contributor to GM's overall balance sheet during the period.

By 1963 Vauxhall's total labor force was more than 30,000, annual output was nearly a quarter million vehicles, sales amounted to 148 million pounds.

The year 1963 also marked a return by Vauxhall to the small car, which it had abandoned with the demise in the late 1940s of the 10-horsepower H-type. The new car was the boxy little Viva, which was to become Vauxhall's first million seller. One historian recalls that it occasionally topped the best seller lists, but only when there had been a strike elsewhere in the motor vehicle industry.

Vauxhall engineers and designers at the time were keeping pace with technical and styling developments rather than innovating. There was nothing to compare with the BMC Mini or the innovative Triumph Herald with fully independent suspension and fine Italian styling. Vauxhall products continued to ape the conservative engineering and flamboyant styling of the parent corporation's U.S. models during the 1960s and early '70s.

That was a period, following Britain's admission to the Common Market, which saw a rise of the European and Japanese cars in popularity. It was a time when Britain's and Vauxhall's competitiveness was being tested. Like much of British industry, Vauxhall was not producing cars efficiently and with sufficient quality. It was fighting a rearguard action as a result of rust and paint problems. In the 1970s Vauxhall was losing sales and money.

● The company's third change of direction, after being a luxury car builder and then a mass producer of miniature American cars, came in 1975.

In quick succession two of its models became Vauxhall versions of Opel designs: The Chevette, adapted from the Opel Kadett, and the Cavalier, adapted from the Opel Ascona. Within a few years the whole Vauxhall line was similarly transformed, Vauxhall cars ceased to be exported in meaningful numbers and the company became an importer of Belgian- and German-made Vauxhalls.

Financial losses continued, but a vast improvement in market share in the UK, following the complete integration of Vauxhall and Opel dealer and product lines, began to provide the company with an air of success that had been absent for many years.

Today, although Vauxhall remains a separate company, it gets its product lines from Adam Opel. Between them, the goal is to lift GM's share of the Western European car market to the levels achieved by major rivals Ford, Renault, Peugeot, Fiat and Volkswagen. □

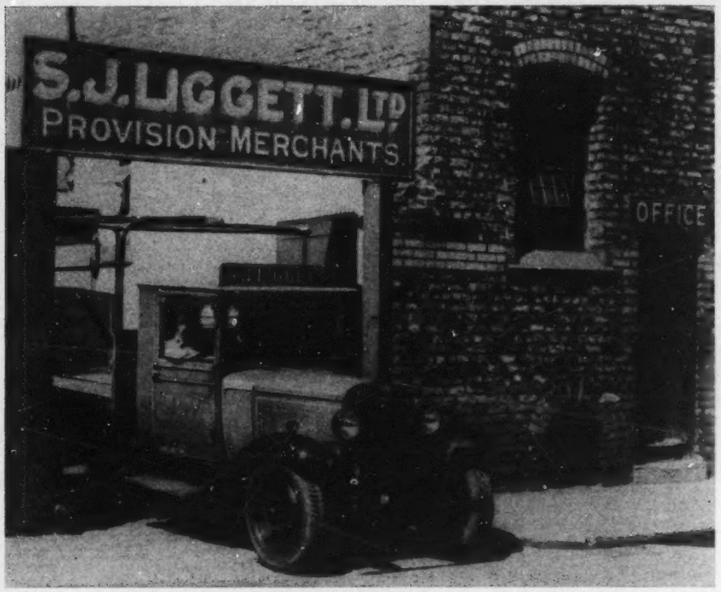
*Joint managing directors.



One of the first Bedfords ever sold was this example of the original two-ton truck bought by a firm of provision merchants in the north of England in 1931. Bedford in the 1930s set the pattern for virtually all medium trucks in Britain for the next 20 years.

'You see them everywhere'

Bedfords were omnipresent in the 1930s

Creation of the Bedford commercial vehicle business was a key part of the acquisition of Vauxhall Motors Ltd., by General Motors in 1925. The first products were locally assembled Chevrolets, which gave way in 1931 to the first true Bedford trucks. Within a very short time Bedfords were appearing in export markets throughout the world.

The first Bedford was a two-tonner with six-cylinder gasoline engine. It featured a four-speed crash gearbox which gave a distinctive sound to Bedford trucks. A factory-built dropside truck could be bought in 1931 for 240 pounds. A 14-seater coach cost 250 pounds.

During the early 1930s the line was expanded to include lighter and heavier models. Vans also were added, based on car chassis.

As early as 1932 Bedford annual sales topped 12,000. The company accounted for over half of all British commercial vehicle exports, with orders from Japan, China, Iceland, Borneo and Russia. The following year sales reached 16,000, and the dispatch of complete-knocked-down kits became a major operation at Luton.

The 1933 Bedford three-tonner set the pattern for virtually all medium-sized vehicles in Britain for the next 20 years, taking Bedford well into the 1950s with few major changes. It had a semi-forward control layout, allowing a longer body to be used on the similar wheelbase.

In 1934 a new advertising slogan was created — "You see them everywhere." It was true, and Bedford archives abound with photographs of products from the 1930s to the present in unusual settings.

World War II saw Luton converted to military output. More than 250,000 Bedford trucks, including the flat-fronted WD and forward-control QL, saw service in all theaters of the conflict.

The company also turned out more than 5,600 Churchill tanks. Secretly Vauxhall carried out 95 percent of the work on the first jet aircraft engines ever built in Britain.

Toward the end of the war Luton once again started making the 1939-designed K, M and O models. In 1947 the half millionth Bedford was driven off the line. Within 11 years the millionth was produced.

The 1950s were years of expansion. The seven-ton S-type, Bedford's first civilian forward control, was launched in 1950, followed two years later by the CA van, the first non-car-derived van from any British manufacturer. In 1957 Bedford's first diesel engines were introduced.

In 1958, the same year its millionth truck was produced, Bedford's TJ bonnetted truck was introduced. It is still in production, mainly for Third World markets.

In 1955 truck production was transferred from Luton to Dunstable, an extension to the existing parts and accessories complex, located there. A total of nearly 65,000 Bedfords was made, more in one year than any other British make.

The 1960s was a decade of model innovation, not least of which was the arrival in 1960 of the TK. This model featured the engine behind the driver, but within the cab. The company says it was "probably the biggest advance ever made in forward-control trucks." Over 500,000 TKs were built, a record total for a British truck model.

At the end of the decade (1969) the CF panel van replaced the CA. The same year the two-millionth Bedford was produced, three-fourths of them trucks. Almost half of the 1.5 million trucks went overseas to 120 countries.

The 1970s saw Bedford extending its weight limits to 44 tons (in the TM range, introduced in 1974). At the other end of the scale a half-ton payload Chevanne went to the market in 1976.

The current decade sees Bedford drawn more closely into GM's World Truck and Bus Group, along with U. S. and Japanese (Isuzu) interests. GM stresses that Bedford will play a key role in the group. As part of that closer link, the truck-making side of Vauxhall has, for the first time, been separated from car making and given its own managing director. □

Opel: Grand old German survivor

From sewing machines to motoring machines

If General Motors bought one of the United Kingdom's smaller auto makers in Vauxhall Motors, Ltd., in 1925, its decision to acquire Adam Opel AG in Germany in 1929 provided it with one of Europe's largest companies.

In 1928 Opelwerke had 8,000 employes, produced a record 42,800 cars and had no serious mass production rival in its homeland. The 1920s, however, were troubled times for Germany. In the early part of the decade production limped along, there was civil unrest in the chaos of a post-war environment and the country's manufacturers were coming under intense competition from imports, specifically from the U. S.

As a result, of 65 German producers in 1924 only 24 survived over the next four years. One of the few successes was Opel which in 1924 had installed the first mass production lines in the country.

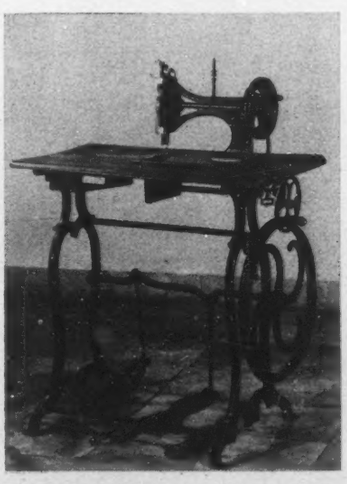
The realization of the shift of power in the auto industry to the U. S. — underlined by enormous export gains by the country's makers — and the desire by the founding Opel family to enjoy the fruits of their 65 years of labor prompted the sale.

Opel had been founded in 1962 by Adam Opel. The company's early strengths lay in sewing machine manufacture and bicycles. Indeed, Adam never lived to see a car bearing his name, and actually thought that bicycles would be a short-lived craze. He died in 1895 following a typhus illness. The company passed to his widow, Sophie, and subsequently to their five sons — Carl, Fritz, Heinrich, Ludwig and Wilhelm. As successful bicycle racers the five brothers made the Opel brand so popular with their 560 victories that their company became the largest bicycle maker in the world.

Like many other manufacturing companies in those days, Opel became captivated by the automobile.

Opel's first car was produced in 1898, based on the Lutzmann. After a fire in 1911 razed the Russelsheim factory, sewing machine manufacture ceased, with more than one million having been produced.

Annual auto production hovered around the 1,000 mark, reaching as many as 3,500 during one year (1914). The decision to install American-inspired production lines at Russelsheim lifted potential enormously and, as it turned out, coincided with increasing stability in the German economy.



The first sewing machine made by Adam Opel in 1862.

Opel's 1924 model was 4/12 Laubfrosh (Tree Frog), a design which owed so much to one of Andre Citroen's models that the French company (unsuccessfully) sued Opel for breach of copyright.

The plan was to build 25 cars a day, twice that of the previous high. But demand for the series was such that before long production was tripled, to the point where in 1938 Opel employed 8,000 people and turned out 42,800 cars.

This, then, was the company acquired by GM. Opel had opened negotiations after GM had acquired Vauxhall, but at the time GM was still establishing its overseas policy. It already had assembly operations in Berlin, and was considering production of a small Chevrolet there. The decision was whether to go it alone or to expand in Europe through acquisition of Opel. Another school of thought proposed expansion through Vauxhall in the UK.

Top GM officials visited Europe in 1928. They inspected the corporation's establishments and visited Opel in Germany. They were obviously impressed. Opel's production lines were new and well chosen, the operation was sound and a good supply of first class labor was available.

Alfred P. Sloan Jr. later wrote that the visit prompted him to negotiate an option on Opel, to expire at the beginning of April, 1929. It was eventually exercised, and in 1929 GM acquired 80 percent of the company for $26 million. It later (1931) bought the remaining shares for an additional $7.4 million.

When Sloan met Opel dealers he told them of ambitious plans to boost production and sales. They were incredulous. Sloan wrote, "I anticipated Opel production might one day run as high as 150,000 vehicles a year. When the statement was translated into German it was received with a good deal of derision. I was viewed as another impractical, visionary American."

GM installed Irving J. Reuter as managing director of Opel. Fritz von Opel — the aristocratic "von" was conferred by the Grand Duke of Hesse — remained as president.

Reuter, previously general manager of Oldsmobile, was reluctant to move to Germany. But GM needed strong control there. As Sloan recalled, "Though Opel was a well run company, it was not without management problems, especially at the top policy level."

The company's dealers were another problem. Opel had never tackled the issue of spare parts, and many dealers had invested in elaborate machine shops of their own in which spare parts could be manufactured. "That did not make sense to an American producer used to a system of mass production based on interchangeable parts, and we set out to correct this," wrote Sloan.

Under GM leadership Opel did indeed build up exports during the difficult 1930s, especially following the introduction in 1935 of the unitized construction Olympia sedan. By 1937 Opel was the leading producer in Europe with annual production of more than 130,000. So valuable was production space that in that year the bicycle business was sold to the German company NSU. At the time Opel was the largest cycle manufacturer in the world.

At the same time Opel also moved

Adam Opel's sons, left to right, Ludwig, Fritz, Heinrich, Wilhelm and Carl unveiled the company's first five-seat bicycle around the turn of the century.

light-truck production to the Brandenburg (Berlin) plant, freeing more space at Russelsheim for car production.

Opel led the German export drive, urged on by political considerations of the 1930s to earn export currency. But the same policies did not allow (after 1934) GM to repatriate profits to the U. S. Instead investments continued in Germany.

It was a time of expansion throughout German industry. In 1932 there were 426,000 private cars in Germany. Five years later there were 1.1 million. Production in 1934 totaled 144,500. Four years later it hit its peak, more than 289,000. Industry's payroll went from 33,000 in 1932 to 120,000 in 1938. Opel's tripled.

Exports played a key role. At the beginning of the decade no more than 11,000 cars a year were sent abroad. In the next six years there was a sixfold increase. By that time Opel was exporting a third of its production and was enjoying more than 40 percent of the domestic market.

The outbreak of World War II threw doubt over the future of GM's German operation. Government interference in running Opel prompted William S. Knudsen to remark, "I have to report with some regret that Mr. Hitler is the boss of our German factory." Auto production did cease in 1940, the year Adam Opel built its millionth vehicle.

During the war Opel built trucks and special components for vehicles and aircraft engines. Consequently, the Russelsheim and Brandenburg factories received the attentions of Allied aerial bombers, starting in August, 1944. Devastation was enormous and no vehicles of any kind were produced in 1945.

Production began slowly after the surrender, under appalling conditions. It started with trucks, some 840 being produced in 1946.

Brandenburg fell within the Russian zone, and equipment at the factory was removed to deepest Russia. In addition, as reparation, Russia demanded all of Opel's assets, including those in the U. S. zone. U. S. authorities resisted, but had to concede production facilities for the little Kadett model. They went to a location in what became East Germany, but quickly found their way to Moscow. Subsequently, the Kadett appeared as the Russian Moskvich in some Western European countries in the early 1950s.

During the early postwar years it

Opel's 1898 "System Lutzmann" car had a one-cylinder, four-horsepower engine, sight-feed lubrication, belt drive to intermediate gear and chain drive from intermediate gear to the rear wheels, and a gearshift lever at the steering column.

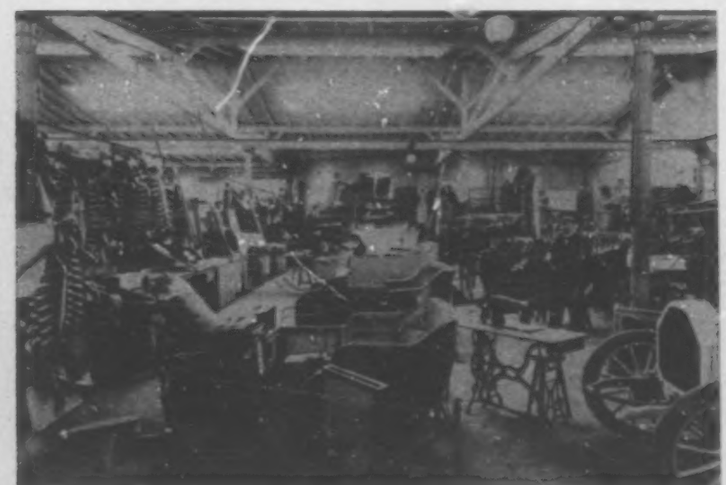
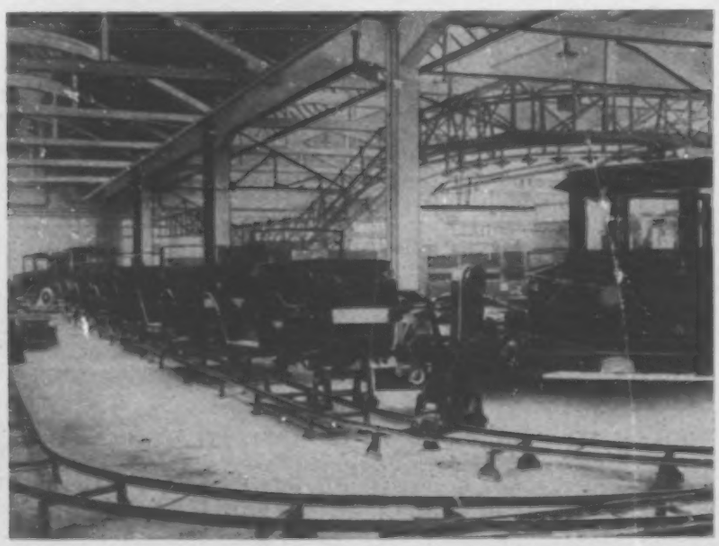
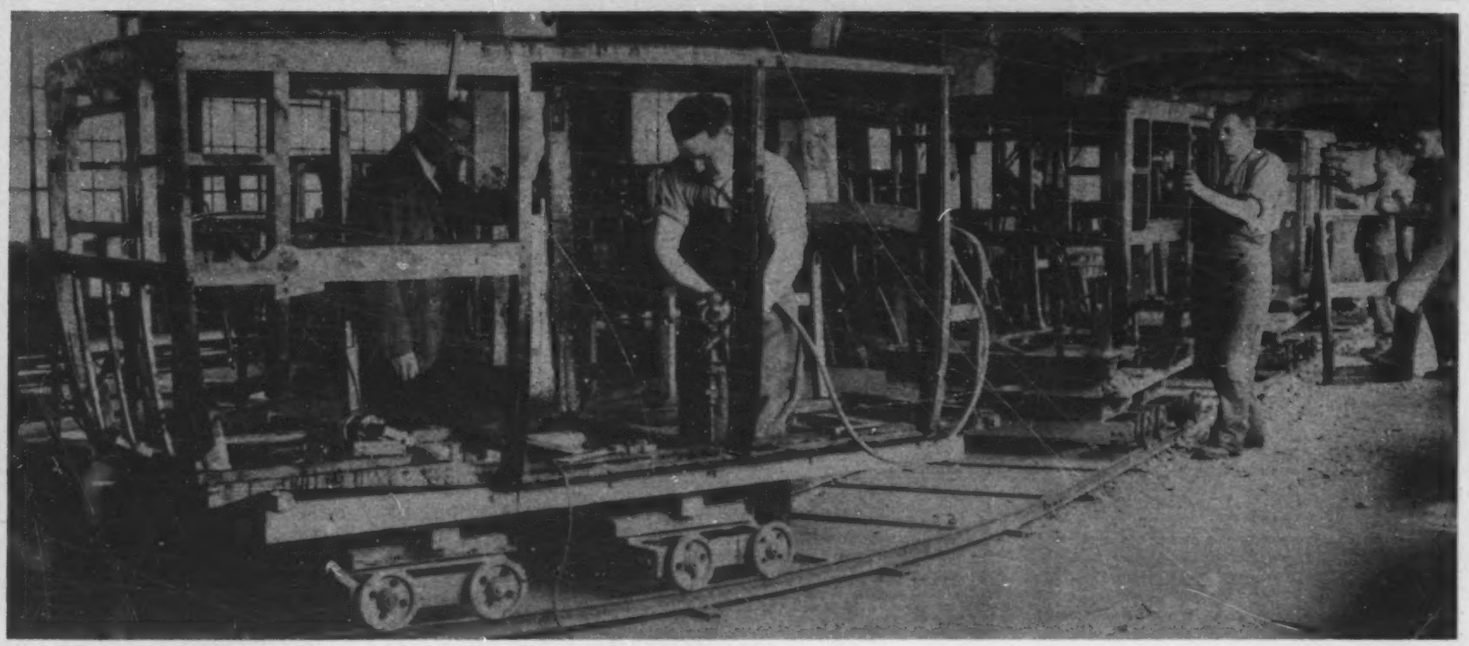
*—Opening of new Bochum plant.



Opel's upholstery shop in 1906 was fit for a king who liked plush seats. The car body in the foreground was for an automobile made for the king of Greece.



Opel's modern production lines impressed GM officials who visited Europe in 1928. The visit prompted Alfred P. Sloan Jr. to negotiate an option with Opel and GM acquired Opel in 1929.



An ample supply of skilled labor at Opel attracted GM to the German company.

was not clear whether GM would renew its ownership of Opel. The sheer cost of rebuilding the facilities, at a time when prospects for a return on investment were bleak, was just one consideration. Eventually, in November, 1948 GM agreed on a two-year trial ownership. It was not prepared to sink more funds into Opel at that stage, but was prepared to offer credit facilities. The corporation appointed Edward K. Zdunek to run the operation.

Zdunek, a former European regional manager for GM's Overseas Operations Division, stayed until 1961. He was, in the words of one commentator, "the perfect choice to guide the fragile Opel ship through the roiling waters of postwar Germany."

Opel's products were in the mid-price market, between the more expensive products of Daimler-Benz and the cheap and cheerful newcomer from Volkswagen. Opel products were the Olympia (a name dating back to the 1936 Berlin Olympics), the Rekord derivative and the Kapitan. They proved to be a remarkably successful line. Opel boomed during the 1950s, along with other aspects of German economic and industrial life. In 1953 production climbed above 100,000. It continued growing throughout the decade to the point where in 1961 Opel produced 382,700 vehicles. In 1956 the two millionth vehicle was produced. Four years later, the three millionth. Two years later, the four millionth.

Demand for sound, reliable private transportation was growing across all of Europe. Opel enjoyed more than a fifth of its domestic market sales — although it gave way to VW as market leader — and exported between 41 and 55 percent of production.

The story was similar across the whole German industry. It was a period when the country climbed to the top of the European production ladder. In 1953 Germany produced fewer than half a million vehicles. Ten years later the total was nearly 2.7 million. The motor industry accounted for one in eight of the country's work force.

With growth on this scale it was obvious that Opel needed more car-building capacity. It was also clear that after the wartime loss of the Kadett to Russia, Opel needed a small car to compete more effectively with VW. Opel and GM planned a $250 million project which would solve both problems, and timed it to coincide with the 100th anniversary of the founding of Opel.

In September, 1962 the first Kadett rolled out of the new Bochum factory, located in the heart of the country's Ruhr industrial and coal mining area. Opel was soon producing 1,000 a day.

Bochum had been chosen not just because it offered the right property for engine, transmission and component factories as well as final assembly. It was chosen because of the availability of good, reliable labor following a slowdown in the Ruhr's coal-mining base.

The Kadett was conventional and boxy. It was basic — just what Europe needed. Its arrival practically doubled Opel's capacity. In 1964 Opel built nearly 689,000 cars. With a few hiccups the total grew through the following 10 years, and in 1973 output stood at 874,000.

That year, though, has gone down as the year in which the first energy crisis hit the world. Its effects were felt throughout the world. In the years leading up to that turning point, Opel had rounded out its model line with the Admiral and Diplomat in 1964, the Commodore in 1967, the GT coupe in 1968 and the Manta coupe in 1970.

The company was not just investing in products. It opened a components plant in Berlin in 1964, and in 1966 completed work on a larger components factory at Kaiserslautern and a proving ground at Dudenhofen. The period culminated — just before the energy storm — with the 10 millionth Opel produced in 1972.

The 1970s saw extraordinary peaks and troughs. On one hand Opel production plunged, in line with general demand, in 1974 to fewer than 585,000, its lowest point in eight years. But when sales returned towards the end of the decade, Opel built an unprecedented 968,000 vehicles.

It was a decade which saw Opel become responsible for European passenger car design, which meant the end of the indigenous Vauxhall brand in the UK. With Opel as the nerve center, GM had moved from national to European dimensions.

Opel's fully justified claim is that its current product line is the most modern in Europe. It is now a full line, thanks to Corsa, and has led to a concerted effort in the early part of the 1980s to join the front runners in the European sales charts. □

The Russelsheim factory was in shambles in 1945 after Allied bombing.

Workers in 1945 dig away at what had been an Opel World War II plant.

Today the Russelsheim facility is one of the most modern in the world.

Let's make a deal

By John K. Teahen Jr.

Since 1908 General Motors has built and its dealers have sold nearly 190 million cars and trucks in the U.S., but the auto maker's avid interest in factory-dealer relations really evolved in the 1920s when Alfred Sloan became the first highly placed auto company official to realize the importance of a dynamic dealer body.

"Nothing happens until somebody sells something."

Not an original statement. Not even a new one. But it's the essence of the American economy.

And by changing one word, it wraps up the entire U.S. automobile industry in a simple aphorism.

Make it: "Nothing happens until the dealer sells something."

If the dealer doesn't sell his cars and trucks to the consumers, he isn't going to order any more merchandise from the factory.

And if the dealer doesn't order vehicles, the factory doesn't build them.

And if the factory doesn't build them, there is no auto industry.

Simple.

Of course, it can be argued that if there were no dealers, the manufacturers would damn well find another way of getting their cars and trucks into the hands of the public.

But dealers have been doing the selling job since the U.S. auto industry was born. If there were a better way, you'd think the industry would have adopted it long ago.

Dealers have been selling General Motors cars since before there was a General Motors—since the days when the corporation was no more than a gleam in Billy Durant's eye.

Oldsmobile dates back to 1897, Cadillac to 1902, Buick to 1903 and Oakland (Pontiac's predecessor) to 1907. (The first Chevrolet was built in 1911.)

General Motors didn't arrive on the scene until 1908. Since

A historic problem in distribution: Horses and sleds became necessary in the winter of 1928 to get these Chevrolets to dealers in Montana in preparation for spring selling.

1908 GM has built—and its dealers have sold—nearly 190 million cars and trucks in this country.

That's big business. Even last year, which was a bummer for the domestic auto industry, GM dealers sold 3.5 million cars and 1.0 million trucks in the U.S.

GM's dealer organization is the largest and the strongest in the auto industry.

• Ever wonder just how big the GM dealer sales volume is?

In a word, it's "bigger" than that of General Motors Corp.

Automotive News estimates that GM's U.S. dealers had total sales of $65 billion last year. The total for the corporation, worldwide, was $60 billion ($50 billion in the U.S.).

Maybe that isn't too unusual. GM sells to its dealers at wholesale, and the dealers sell the same cars, trucks and parts to the public at retail. If retail isn't bigger than wholesale, retail is in serious trouble.

But isn't it interesting that a group of 10,000 or 11,000 "small businessmen" did more business than the company that ranks second (after Exxon) on the Fortune magazine list of the 500 largest U.S. industrial corporations?

So let's compare retail and retail. The Fortune Service 500 lists Sears, Roebuck as the nation's largest retailing operation. Sears' 1982 volume? A paltry $30 billion, less than half of the $65 billion total for GM dealers.

The GM dealers' total includes all facets of their operations—new and used cars and trucks, parts and accessories, service, finance and insurance, rental and leasing.

Today GM's 10,000 car dealers have a combined net worth of about $4.75 billion. They employ 320,000 persons and have 250 million square feet of facilities under roof.

There are fewer dealers today than in the past, but the other numbers have risen. In 1962, for example, 13,800 dealers had a net worth of $2 billion and had 275,000 employes and 227 million square feet under roof.

Going back to 1941 there were about 17,000 GM dealers with a net worth of $740 million, 190,000 employes and 117 million square feet under roof.

GM does not have nearly as many dealers as it once had, but this is in line with an all-inclusive trend in the domestic industry. The domestic dealer total has fallen every year since 1955, and GM has not been immune.

In 1955 GM had about 17,000 dealers. At the beginning of this year, the car-outlet total was 10,160. (GM's car-truck dealer count was 10,840, including the GMC Truck locations that do not handle a GM passenger car.)

GM's car-dealer figure is down 40 percent since 1955. The total for the domestic industry is off 49 percent.

Throughout the industry during the last quarter-century, there has been a definite move toward fewer but larger dealerships.

The reasons are many and varied. Shopping patterns for all types of merchandise have changed. Aside from the supermarket and the drugstore, people are no longer "neighborhood" shoppers.

Much has been written about the effect of expressways and superhighways on vacation and business travel. It applies equally to day-to-day living. The dealership or clothing store or furniture emporium on the other side of town (even a big town) is just a short trip via "the expressway."

There have been massive population shifts within metropolitan areas as consumers have moved to the suburbs and the exurbs. And those migrants are prime prospects for the auto companies. They are the affluent, multicar families, people who don't drive the wheels off the old bus before trading it.

They also don't mind driving a few miles on those fine highways to reach the dealer of their choice. Again, fewer but larger dealerships.

Conversely, the core cities have declined as ideal dealership locations. This is borne out by an examination of the Yellow Pages of any metropolitan area.

The placement of dealerships has become an extremely important function of every auto company.

• But the principal reason for the dealership decline, at GM and elsewhere, is probably a lot more basic than those outlined above. It is, quite simply, money. Money to get in and money (profit) to keep going.

It takes twice as much capital to start a dealership today as it did 15 years ago. Many people with the necessary assets and entrepreneurial ability prefer to invest in a business that holds promise of a higher return.

It has become harder and harder to make a buck in the retail auto field. The auto depression of the last three years—with sky-high interest rates, rising expenses and poor sales—has driven thousands of dealers out of business.

But veteran dealers will testify that the profit pinch is nothing new, it's just a lot worse now.

Despite the problems, GM's dealer organization is recognized—and has long been recognized—as one of the corporation's greatest strengths.

It is the industry's largest dealer body. With 10,000-plus members, it is nearly twice as big as Ford Motor Co.'s 5,400.

It is a strong and immensely capable group of retailers. GM has not always guessed right on styling and features (remember air suspension and the '57 Buicks and Oldsmobiles with the bars on the rear window?), but the dealers have moved the product and have kept the profits rolling into headquarters.

(Granted, the dealers didn't have a helluva lot of choice. It was either sell what the factory made or sell nothing.)

And it's a prosperous organization. Looking only at the last three years, GM dealers may take issue with the word "prosperous," but they've done mighty well over the years. Better, probably, than any other group of auto merchants.

Back in the 1960s, in the glorious days of Knudsen-Estes-DeLorean, a Pontiac dealer told *Automotive News:* "Every Pontiac dealer should get down on his knees every night and thank God that he *is* a Pontiac dealer."

During the 1960s and the early 1970s, Volkswagen dealers were hip-deep in a pot of gold, and the purveyors of the leading Japanese makes have been enjoying that condition in recent years. But over the long haul, GM dealers hold the money title and the success title.

A number of GM dealers have turned to imports to keep the profits flowing. Currently, GM retailers hold 1,640 import-car franchises, of which 1,005 are for Japanese makes.

• The GM dealer body is long on experience. At least 3,000 have held their franchises for 25 years or more. An exact figure isn't available because Oldsmobile doesn't know how many 25-year dealers it has.

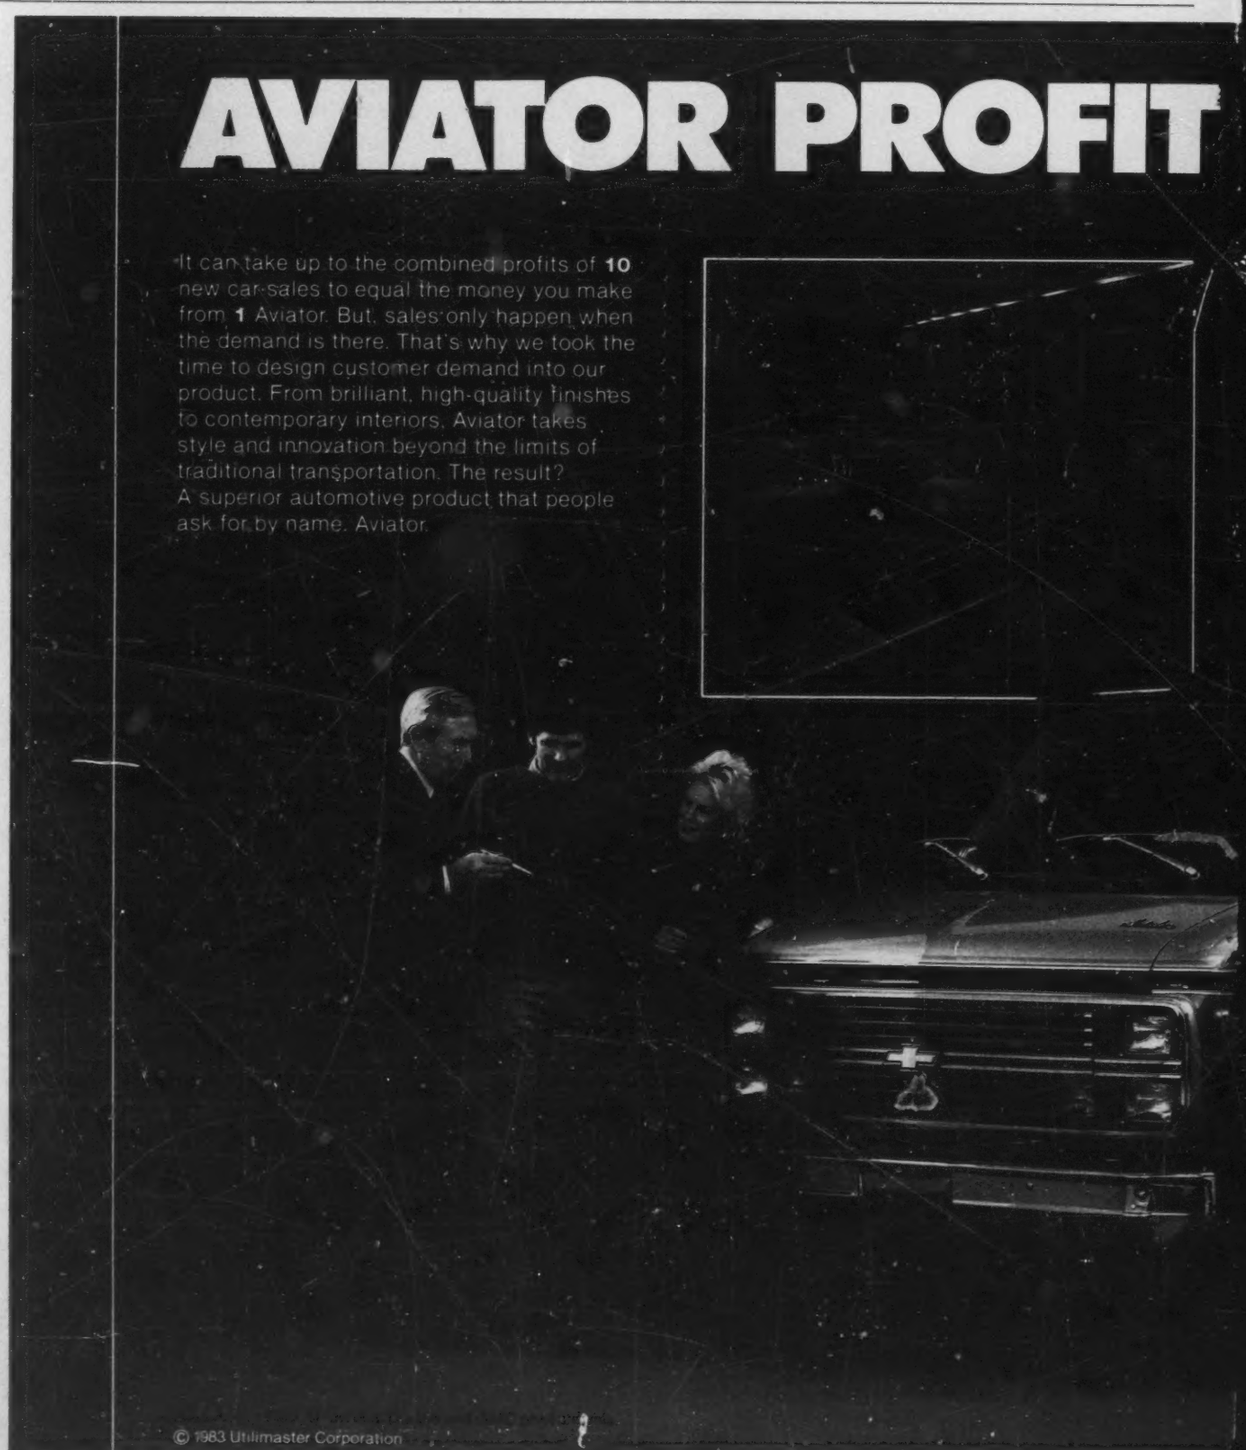
Chevrolet counts 1,115 quarter-century dealers, which is 21.5 percent of its total, and 116 of them have been handling Chevrolet for 50 years or more.

Pontiac has 552 dealers in the 25-years-or-more group, 19 percent of its organization, and Cadillac has 273, of whom five are 50-year dealers. The 273 is 17 percent of Cadillac's total.

Buick estimates that 25 percent of its dealers have been operating their businesses for 25 years or more. That would be about 725.

The total for those four makes is 2,665. Oldsmobile's number would undoubtedly push the corporate count beyond 3,000.

It is likely that many of those



veterans have been franchised by two or more divisions for better than 25 years, so it wouldn't be accurate to say that the 3,000 make up 30 percent of GM's 10,000 car dealers.

On the other hand, the total would be even higher if second-generation and third-generation dealerships were included. The figures supplied by the divisions are the number of 25-year dealerships still operated by the original franchise holder.

• Naming the oldest GM dealership is not easy since there are so many ways that this distinction can be claimed. There are, for example, the oldest still operated by the original franchisee, the oldest still operated by the same family, the oldest despite change of family owners, the oldest firm though it may have started in another business or with a non-GM make.

From available information, it appears that Roth Cadillac, Inc., Erie, Pa., is the oldest GM dealership continuously operated by the same family. The company was founded in 1903, the year after the first Cadillac was built and five years before General Motors was formed.

Four generations of the Roth family have sold more than 10,000 Cadillacs during the dealership's eight decades. Robert Q. Roth Sr. is chairman of Roth Cadillac, and Robert Q. Roth Jr. is president.

With a 1903 founding date, Roth Cadillac has to be older than any Chevrolet or Oakland/Pontiac outlet. Buick, founded in 1903, mentioned no dealership that old, nor did Oldsmobile, which dates back to 1897.

Stillman & Hoag Inc., a Buick dealership in Englewood, N.J., is sharing its 75th anniversary with GM. It was established in 1908 by Walter (Colonel) Stillman and Daniel Hoag.

Walter (Bud) Stillman succeeded his father and operated the firm for many years. He is now chairman and his son, Robert Stillman, has been president since 1972. Robert's son, John, joined the firm this year.

Glockner Chevrolet, Portsmouth, O., has been handling Chevrolets since 1912. Andrew M. Glockner, the fourth generation of the family, was named president last year. He succeeded his father, Edward L. (Ebb) Glockner, who had headed the dealership for 34 years.

• Another dealership dating back to 1912 is Whitaker & Son, Inc., which sells Buick and Chevrolet in Sidney, N.Y. Glen E. Whitaker Sr. is president, and Glen E. Whitaker Jr., the fourth generation, is vice president.

Irving J. Demarest retired last year as Chevrolet's "senior dealer," but his dealership goes on under the direction of his grandson, Roger T. Demarest. Irving Demarest received his first Chevrolet franchise in 1914. The dealership is I.J. Demarest, Inc., Westwood, N. J.

Carpenter's, Inc., Durham, N. C., has been in the Chevrolet business since 1915 and handled Ford and Dodge before that. Marcus G. Carpenter Jr. and Fred G. Guthrie have been the operators since 1955.

That's not a complete list of GM's oldest dealers, but it shows that selling GM products has been a many-generation career for a lot of families.

When the car divisions talk of their "senior dealer," they mean the original franchisee who has operated his dealership for the longest period.

Chevrolet's representative has the longest tenure. He is Gilbert Colussy, who has headed Colussy Chevrolet, Bridgeville, Pa., since Aug. 1, 1918. Colussy took over the top spot a year ago when Irving J. Demarest (see above) retired.

Pontiac's senior dealer is L. Harris Racke, of Racke Pontiac, Inc., Naugatuck, Conn. He has held his franchise since Dec. 29, 1924. Racke started as an Oakland dealer; the first Pontiac came along in 1926.

The oldest Cadillac outlet operated by the original franchisee is Modern Motors, Glendale, Calif., which dates back to 1926. The dealer is Lee P. Speights.

Oldsmobile also reaches back to 1926 for its senior dealer. He is A. C. Kuykendall, of Kuykendall Motor & Leasing Co., Temple, Tex. He signed his first Oldsmobile franchise April 22, 1926 and is also a 50-year Cadillac dealer. In second place is Walter T. Haase, Haase Oldsmobile, Inc., North Bergen, N. J. Haase came aboard on March 26, 1928.

Buick could not supply the name of its individual dealer with the longest tenure.

Who's GM biggest dealer in terms of new-car volume? Don't ask. The corporation and four of its car divisions guard that information the way Grandma guards her recipe for turkey stuffing.

Oldsmobile is the pleasant exception. The biggest Olds dealer is Dale Oldsmobile, Bronx, N. Y. The dealership, headed by Mark Rosenstock, has been Oldsmobile's leader for the last three years.

Dale sold 15,275 new Oldsmobiles in 1980, jumped to 15,936 in 1981 and moved 11,344 in 1982. The dealership does a huge fleet business. Fleet sales accounted for about 13,500 of its deliveries in 1980, some 12,000 to 13,000 in 1981 and about 9,800 in 1992.

• Through the years, GM and its dealers have lived together rather peacefully. There was a bitter period in the mid-1950s when that was certainly not the case, but that was the exception rather than the rule. That confrontation will be examined in detail later in this chapter.

There have always been critics in the retail organization, and there always will be. It's impossible to write a franchise or conduct factory-dealer relations in a manner that will satisfy everyone of the 10,000 highly independent men and women in the dealer group.

In recent years, GM has not met the organized criticism at the dealer level that Ford Motor Co. and Chrysler Corp. have faced. There has been no Ed Mullane nor Ray Cohen in its dealer ranks.

Mullane, a Ford dealer, heads the Ford Dealers Alliance. Cohen, a former Dodge dealer, organized the Independent Dodge Chrysler Dealers Assn. Its name was changed to Independent Dealers Committee Dedicated to Action when it began enlisting dealers handling other makes.

GM's interest in factory-dealer relations goes back a long way, back to the 1920s and the days of Alfred P. Sloan Jr.

Sloan was probably the first highly placed factory executive to realize the importance of a strong dealer organization.

In his book, My Years with General Motors, he wrote, "When I was chief executive of GM, I gave a large part of my attention to dealer relations, amounting at times, you might say, almost to specialization.

"I did so because the experience of the 1920s, when the modern problems of automobile distribution took shape, taught me that a stable dealer organization is a necessary condition for the progress and stability of an enterprise in this industry."

He said the prevailing attitude in the industry in the early 1920s was that the manufacturer should attend to the product, the prices, the advertising and promotion and leave the rest of the elements of distribution to the dealer to work out.

Sloan's contacts with dealers were on a face-to-face basis. He wrote:

"I made it a practice throughout

RATIO: 10 to 1

And, to help you sell Aviator, we've put together one of the most comprehensive marketing packages in the automotive industry. Full-color brochures. Merchandising aids. Attractive dealer incentives. Everything you need to make sales happen.

As part of Utilimaster Corporation — one of the leading makers of commercial vehicles in the nation — we can offer you significant *volume discounts* on all qualifying Aviator and Utilimaster purchases. That means low dealer costs, high profit margins and short delivery time. And, we pay *cash* on all warranty claims.

Aviator puts personal luxury and comfort at your customer's fingertips, and profits into your 1984 sales plan. For the whole profit story, complete the reply card below.

"Where Luxury Knows No Limit."

the 1920s and early '30s to make personal visits to dealers. I fitted up a private railroad car as an office and in the company of several associates went into almost every city in the U.S., visiting from five to 10 dealers a day.

"I would . . . ask them for suggestions and criticism concerning their relations with the corporation, the character of the product, the corporation's policies, the trend of consumer demand, their view of the future and many other things of interest in the business."

Those dealer visits continue today, though not so much at the chief-executive level. Divisional general managers and general sales managers tour the nation once or twice a year to meet with their retailers. But they don't use a "private railroad car."

• Sloan said he made "careful notes of all the points that came up, and when I got back home I studied them."

He added, "This time and effort-consuming approach was particularly effective under the circumstances existing at that time when we knew so little about the facts of distribution in the field.

"Many things that we learned were subsequently reflected in our dealer selling agreements, and communications in particular were put on an established basis through councils and in other ways which at least in part served to meet the same need."

Among the programs that grew out of those meetings were the 10-day reports on sales and inventory along with monthly projections of sales and projected stocks for the next three months, programs to train dealership sales and service personnel, assistance to the dealer in the design and arrangement of his physical property and market studies on the placement of dealers in a specific area.

Carryover allowances were instituted. This feature, still in effect today although terms have changed through the years, pays the dealer a percentage rebate on prior-year vehicles in stock when new models are introduced.

A major innovation was a standardized accounting system for GM dealers, which was developed in 1927. Dealers were required to report their financial situation to the corporation on a uniform basis.

"This was a big and expensive effort," Sloan said in his book, "but it enabled each division of GM and the central office to look through the whole distribution system, dealer by dealer and group by group, and determine just where the weaknesses were and what should be done about them.

"Furthermore, the dealer himself could not only judge his own complicated business intelligently but also compare his operations, item by item, with group averages. Often the soft spot would be discovered in time to make corrections before harm was done."

Another vital project of that era was Motors Holding Corp., formed in 1929 to reduce dealer turnover by stabilizing dealerships and, chiefly, to assist in providing capital to capable persons whom GM felt would become valuable dealers. The activity became Motors Holding Division in 1936. It will be discussed in greater detail later in the chapter.

• World War II wasn't much fun for any merchant handling consumer goods. Production in all fields was severely limited as the nation's factories converted to war materiel. For auto dealers, supplies were shut off completely, and sales of new cars on hand were strictly regulated by the government.

Shortly after the U.S. entered the war, Sloan wrote GM dealers, outlining a policy aimed at maintaining the dealer organization. The policies included:

1. An offer to buy back cars, parts and accessories the dealer wished to return. In his book, Sloan said this was for the protection of dealers who might be drafted into the armed forces or who, for any reason, might wish to terminate their selling agreements.

2. Preferential consideration after the war for reappointment if the dealer closed his business on conditions that were mutually acceptable to the dealer and the division.

3. A special allotment plan for new cars for two years after resumption of production for those dealers who remained in business during the war.

Sloan said in his book that the GM dealer total dropped during the war from 17,360 in June, 1941, to 13,791 in February, 1944.

The dealers who continued in operation existed on parts and service and used cars, though used autos were scarce since there were no new ones entering the pipeline. Some dealers used their shops to do subcontracting work in war production.

Dealer relations weren't much of a problem for GM or for anybody else in the years immediately following World War II. Auto dealers were mighty happy to be auto dealers. They were making a potful of money as a car-starved population clamored for new vehicles.

The times spawned abuses at the dealer level. There was price gouging in the sellers' market. There was favoritism to friends instead of strict adherence to waiting lists. Dealers wound up with a bad name. The bad name was justified in some instances, but reputable dealers found themselves in a barrel that was being spoiled by a few bad apples.

But, as noted, factory-dealer relations were quite good. Dealers really didn't have much to complain about except a lack of merchandise. Maldistribution was a sore spot, but it usually meant "the factory won't send me as many cars as I want."

• But a sellers' market doesn't last forever, and by 1953, the buyer was back in command.

The factories were on a volume binge. They liked the idea of selling everything they could build, and their capacity for building cars was increasing.

Dealers were pressured to take more and more cars. How they sold them was their problem—but if they didn't buy what the factory demanded, their franchises might not be renewed at the end of their one-year contracts. Some of the Sloan principles seemed to be falling by the wayside.

There was the infamous Chevrolet-Ford battle in 1954. The two leaders engaged in a desperate struggle for supremacy, and the story goes that late in the year dealers (with factory encouragement) were registering as sales the motor numbers of cars that hadn't even been built.

The final R. L. Polk registration figures for 1954 showed Chevrolet in front by a count of 1,417,453 to 1,400,440, but it was hardly a victory to be proud of.

Then came 1955 and sales zoomed right off the charts. There had never been anything even approaching that year's volume of 7,169,908 new-car registrations—and only 51,858 of them were imports.

(Incidentally, 1950 was also a fantastic year—6,326,436 registrations—but there were special circumstances. The Korean War started in June, and customers rushed to buy, fearing a cessation of auto production, as in World War II.)

Factory pressure on dealers reached its peak in 1955. Franchise cancellations rose, and the retailers turned to Congress for help. Washington wasn't much of a factor in autodom in those days, but it certainly became one in 1955-56.

• It's no exaggeration to call the period from November of 1955 to August of 1956 the most important

75
YEARS
OF
EXCELLENCE

Congratulations
General Motors

CP Rail

ever in the field of factory-dealer relations.

That 8½-month span saw extensive hearings in the U. S. Senate on the relationship between GM and its dealers. It brought a complete revision of the GM dealer franchise. It encompassed hearings by another Senate subcommittee on factory-dealer matters. And it wound up with the enactment of The Automobile Dealers Franchise Act, better known as the good-faith law or the dealer day-in-court law.

The year started calmly enough with Senate hearings on the auto industry in the spring. GM was not involved.

Then came November and a non-stop period of activity. The Antitrust and Monopoly Subcommittee of the Senate Judiciary Committee began examining the structure, policies and practices of General Motors.

Directing the inquiry was a Democratic senator from Wyoming, Joseph C. O'Mahoney, who wasn't supposed to be filling that role. The chairman of the subcommittee was Senator Harley Kilgore, West Virginia Democrat, but Kilgore was out of the country so the gavel was placed in O'Mahoney's hands.

One wonders if the history of factory-dealer relations would have been different if Kilgore had had the chair and O'Mahoney had been just another senator on the panel. But that's idle speculation. O'Mahoney *was* the boss, and it was *his* hearing.

A full complement of GM brass was on hand, including President Harlow H. Curtice, the corporation's chief executive, and Vice President William F. Hufstader, head of the Distribution Staff (now Sales and Marketing Staff). They didn't enjoy themselves much.

Among the witnesses were a number of active and former (read that "canceled") GM dealers. Their testimony was not exactly flattering to GM.

They felt they had been unfairly terminated by GM. Dealers were described as vassals of the manufacturers with about as many rights as the vassals of feudal times.

As the hearing moved along, it became more an examination of the relations between GM and its dealers than a study of GM's structure, policies and practices.

Factory pressure to take unwanted cars and equipment was alleged. The one-year term of the franchise was mentioned. GM had gone to one-year contracts (from indefinite term) in 1947 because of the first of the state factory-dealer licensing laws. The one-year pact permitted cancellation (or non-renewal) without violating anti-cancellation provisions of those laws.

• During the hearings, Curtice announced that the GM franchise was being extended to five years. O'Mahoney liked that, but he stressed that "it does not relieve the contract from its other aspects that have been criticized."

NADA was a witness. At one point, Frederick J. Bell, a retired admiral who was executive vice president of the dealer association, told the subcommittee:

"In their impatience to make fine motor cars even better, the auto manufacturers have somehow classified their dealers as being part of an overall system of automation, as being not flesh and blood people, but instruments to be controlled by pushbuttons."

Bell also supplied the "economic vassalage" appellation.

GM promised no reprisals against dealers who testified. Of course, most of them were beyond reprisals — their franchises had already been canceled.

One of those who survived was M. H. (Doc) Yager, a Pontiac dealer from Albany. Among other things, he charged that GM was using the 10-day report as "an instrument of torture to make sales trends coincide with production schedules."

In a somewhat milder vein, Yager mentioned the many references to the sales agreement as a unilateral contract and observed, "This condition has long been recognized by dealers, but under more benign management with its recognition of a mutuality of interest, the dealers were much less concerned because of their justified confidence and trust.

"Developments have so severely shaken that confidence and trust that attention has been more intensely focused on the selling agreement, and a realization that a more substantial instrument is imperative to give greater security on investment and on which to build our future has alarmed the industry."

Strong words, but the franchise wasn't yanked. Some six weeks after the hearings, William Ullman, *Automotive News* Washington bureau chief, referred to the speaker as "M. H. Yager, the Albany Pontiac dealer who is still a Pontiac dealer . . ." And he remained one until he retired many years later.

Price packing, bootlegging and territory security—three of the issues of the time—were aired, and Curtice explained that GM was powerless on all three fronts.

Price packing was a dipsy-do practice in which a dealer might quote an artificially high price. Few people knew what car prices were in those days (there was no price sticker law).

Bootlegging was the sale of a new car by a dealer to an unfranchised person (generally a used-car dealer) for purposes of resale. Dealers blamed it on overproduction and high sales quotas set by the factory.

• Curtice denied that overproduction was the culprit. He said GM had sought to put an anti-bootleg clause in the franchise (require that the dealer give the factory a chance to buy back cars the dealer considered as overstocked), but GM dropped the idea when the Justice Department refused to assure GM that such a clause would not lead to criminal proceedings.

Indeed, GM did make an informal offer to buy back such cars and received virtually no response. Naturally not, said dealers; it would be an admission by the dealer that he could not sell his quota and might lead to franchise cancellation.

Territory security was another program that was bombed by the government. Curtice said it was withdrawn several years before because the Justice Department said it violated two antitrust laws.

Throughout the hearings, Curtice and Hufstader insisted that the great majority of GM dealers were prosperous and satisfied and that the complaints being raised did not represent the feelings of the dealer organization as a whole.

Hufstader said GM had 5,976 applications for franchises on file. He didn't say it in so many words, but the implication was, "If our franchise is so bad, why do so many people want it?"

Hufstader said a few dealers had suffered reverses because they were unprepared for the day when "customers ceased walking into their stores clamoring to have their names put on an order blank." This was a reference to the end of the sellers' market in the early 1950s.

O'Mahoney wasn't convinced. His introduction of the good-faith law a short while later was proof of that.

And GM's position that dealers were largely contented suffered a stinging blow a few days after the O'Mahoney hearings ended. It came in the form of survey results released by another Senate subcommittee.

This was the Automobile Marketing Subcommittee headed by Senator A. S. Mike Monroney, Oklahoma Democrat. In preparation for

75 and still delivering.

GMC is proud to salute General Motors on its 75th Anniversary.

We've seen a lot of change during those 75 years. In that time, we've moved from crude hand building to computer-aided design and robotic assembly. Chain-drive, one-cylinder horizontal engines and primitive buckboard seats have been replaced with things like on-demand four-wheel drive, turbocharged diesel engines and levels of comfort and convenience that once belonged only to automobiles.

But right from the start, our goal has always been the same: to deliver products that reliably transport people and their goods when and where they want to go. That is something GMC and General Motors have done since day one. And something we hope to continue for a long time to come.

GMC

Here's to GM's 75th Anniversary. And the fact we're still delivering.

GM 75

hearings to begin in January of 1956, Monroney's subcommittee had sent questionnaires to all new-car dealers.

In mid-December, Monroney announced the answers from GM dealers. He said he had 8,276 replies, nearly 50 percent of GM's total dealer body of 17,000.

And 73 percent of those replying dealers (6,049 out of 8,276) said they felt the need of Congressional intervention into automotive retailing. Only 869 respondents, or 10.5 percent, saw no need of federal help. The rest either didn't answer the question or said they did not know.

The survey also found that 4,069 of the GM dealers responding (49.1 percent of total GM answers) said "pressure from factories to take more cars than needed" was one of the primary causes of bootlegging.

(EDITOR'S NOTE: The Monroney hearings were concerned with such matters as phantom freight, new-car bootlegging and unsound financing. A bill was drawn and was approved by the Senate Commerce Committee, but it was not acted upon in that session of Congress.

(But Monroney's day was coming. In 1958, he sponsored The Automobile Labeling Act—the price-sticker law—which has had a profound effect on automotive retailing since it went into effect at the beginning of the 1959 model year.)

• After the O'Mahoney hearings and release of the Monroney survey, the handwriting was clearly on the wall for GM. And GM is very good at reading handwriting on walls.

The handwriting said: Major changes in the GM dealer franchise are needed. And that's exactly what GM put into effect.

"Landmark document" is a much overused term, but the new GM selling agreement certainly merited that designation. It was announced early in March and became the model for dealer contracts throughout the industry.

The selling agreement became effective March 1, 1956, and was discussed by Curtice the following day in a closed-circuit telecast to dealer meetings in 38 cities in 29 states and the District of Columbia.

Curtice spoke from Los Angeles, where the 1956 General Motors Motorama was opening. Insiders referred to his speech as "the Sermon on the Mount."

He called the new contract "the most equitable and most progressive ever developed in our industry" and added that it "establishes—as legal obligations — policies and equity considerations which the dealer can enforce under the laws of the land regardless of who administers the contract."

That last was probably in reply to rumblings about a good-faith law, rumblings which were already being heard, thanks to O'Mahoney.

Curtice continued, "I see very clearly the beginning of a new era in the relations of General Motors and its dealers—an era of goodwill —an era of progress and continuing prosperity—and an era, too, in which we shall win the regard of our fellow citizens as true leaders in our respective spheres of influence."

In the new franchise, GM assumed 100 percent of warranty labor costs. The figure formerly was 65 percent.

The carryover allowance was increased to 5 percent of the list price on all vehicles in stock (except some demos) when new models were introduced. The allowance formerly was 4 percent, and was paid on vehicles in excess of 3 percent of those purchased by the dealer during the prior model year.

In other words, if a dealer bought 1,000 cars during the model year, 30 would be excluded from the carryover payment. If he had 50 left, he'd be paid on only 20 of them.

The period in which parts could be returned to the factory for credit was increased from 30 to 90 days.

• A dealer was permitted to name his successor. This was an expansion of a clause which allowed a dealer to designate his son or son-in-law as his successor.

The successor could be an associate mentioned in the contract as a qualified operator of the business or any qualified person active in the business. In those cases, the successor had to have a specified minimum financial interest.

The dealer also could elect that his widow retain a financial interest of not less than 25 percent for five years.

More financial assistance was given in the event of termination. GM said it would repurchase all unused parts listed in the current parts price schedule, any new accessories bought within the preceding 12 months and all special service tools recommended by GM for use in the dealership operation and purchased by the dealer within three years of termination.

The allowance under the Parts Obsolescence Plan was increased from 2 percent to 4 percent of annual purchases.

GM increased its contribution to co-op ad funds from 30 cents for each $1 contributed by the dealer to 50 cents for each $1.

At the same time, GM absorbed the costs of new-car direct-mail programs previously charged to the dealer. Also, the dealer and the division would share equally the costs of sales contests and owner magazines, which previously had been borne entirely by the dealer.

The factory share of the sales contests and owner magazines was charged against the company's contribution of 50 cents for each $1 put up by the dealer for co-op ad funds.

And the 1956 franchise contained a new system for evaluating the sales performance of the dealer. This was an important and much-desired revision from the dealers' standpoint.

The old franchise included a clause that said flatly, "Dealer shall develop to the seller's satisfaction the sale of (make) motor vehicles in the area described in Paragraph First."

The new clause took into account the trend of the dealer's sales performance, the availability of new cars and the local conditions affecting sales.

Also, where there were several dealers handling a specific GM make in the area, an evaluation of combined sales performance would be made with each dealer expected to contribute his "fair share" of sales.

GM also eliminated many clauses of the old agreement which, Curtice said, "have had only a limited application over the years."

Maybe GM missed one of those clauses. *Automotive News* reported in 1956 that "Cadillac dealers are mildly amused at signing a document that gives them the non-exclusive right to use the terms 'Cadillac' and 'LaSalle' in their businesses."

There hadn't been a LaSalle since before World War II.

But, on the other hand, there was much talk—then and since—about bringing back that revered nameplate. Maybe the GM legal folks were simply touching all the bases.

In analyzing the new selling agreement, *Automotive News* said: "It appears to be a somewhat simpler and more diplomatic legal document. In many sections, the former document gruffly stated the demands of the factory. The new agreement makes many of the same demands, but includes a diplomatic explanation of why they are necessary."

• There were many other changes outside the selling agreement itself, which Curtice said were designed to improve factory-dealer relations.

GM said it would improve its wholesale operations by establishing new zone offices as needed, adding personnel if necessary and expanding business management services for dealers.

A warehouse charge of $5 to $7 on cars delivered through warehouses was eliminated.

A group life insurance program was set up. Dealers under 65 could obtain policies ranging up to $100,000 without medical examination.

GM scrapped its old Dealer Relations Board, which had been in operation since 1938, and replaced it with an impartial umpire who was to adjudicate appeals from decisions (generally cancellations) of GM divisions.

Retailers weren't at all sorry to see the end of the Dealer Relations Board. In 1955, it consisted of Curtice, Hufstader, two executive vice presidents and the vice president and general counsel. And the board could call upon all the facts-and-figures people and all the charts-and-graphs experts in the entire GM organization.

The dealer, on the other hand, had about as much protection as a rowboat in a tidal wave. He couldn't even bring his attorney to the meeting.

The position of executive vice president in charge of dealer relations was established, and Ivan L. Wiles was named to fill it. He was Buick general manager and a member of the GM board of directors. Wiles was to operate independently from Hufstader and from the sales and distribution activities of the car-truck divisions.

Curtice said Wiles "will continuously survey dealer opinion so that problems which affect dealers will be handled promptly and properly. He will make certain that the thinking of the dealer body is reflected to me directly and realistically."

The job didn't last long. Wiles retired in 1958 and no successor was named.

GM also adopted a policy of having elected (rather than appointed) dealer councils at the zone, regional and national level for each vehicle division. (The GM President's Dealer Advisory Council, which spans all divisions and includes Canada, continues to be an appointed body.)

• The appointed dealer councils drew some heat during the O'Mahoney hearings from the outspoken Doc Yager. He said:

"General Motors will contend that they some years ago set up dealer councils within each automobile division and established another at the summit with the chief executives of GM and repre-

sentatives of each make from various parts of the country.

"This contention is true, but it is a loaded deal. I have on repeated occasions served on the Pontiac council, although I have not been invited to do so in recent years.

"These councils are made up of carefully screened dealers who are nominated by their zone manager and further screened by the central office before an invitation is issued," Yager said.

"Certainly, no zone manager will embarrass himself by nominating a maverick, but invariably picks out an apple polisher who will behave himself in the august presence of central office brass.

"Further, at these councils, a rigidly adhered-to agenda is laid out, and even a maverick would have a hard time getting out of step with the tune they play."

The new franchise gave dealers their choice of three time periods—one year (the old arrangement); five years (announced by Curtice during the O'Mahoney hearings), or indefinite term.

Each could be canceled by the dealer without cause on 30 days' notice. GM could cancel the one-year and five-year pacts only with cause, but it could cancel the indefinite agreement without cause on 90 days' notice. Virtually all dealers chose the five-year contract.

The indefinite-term pact was dumped in 1970 because fewer than 10 dealers had requested it. Today, all contracts are for five years, although shorter ones may be tendered in what GM calls "special situations."

As mentioned, the position of executive vice president for dealer relations didn't last long, but the elected dealer councils and the impartial umpire system are still in effect.

The umpire is an important part of the dealer appeals procedure even though not too many matters come before him. This is because GM does its utmost to settle cases to the satisfaction of company and dealer before they get that far.

The umpire gets mostly matters of precedent and things which GM feels strongly enough about to take all the way to the court of last resort—at the GM level, that is.

There have been changes in the GM selling agreement since 1956, of course. No contract can live forever without revision in an industry as volatile as the retail automotive field.

But there has been no full-scale rewriting of the franchise as there was in that historic year. The alterations have been chiefly refinements, changes made to meet new situations in the industry.

Some of the changes have been due to federal and state legislation. Nearly 40 states now have laws embracing the subject of manufacturer-dealer relations.

• Meanwhile, back in the U. S. Senate, O'Mahoney hadn't given up his thesis that auto dealers needed further protection against coercion, cancellation and other problems.

On Jan. 30, 1956, O'Mahoney addressed the NADA convention, which was held—quite appropriately—in Washington. He promised to push for selling agreements that would be enforceable by the courts.

He noted that there were indications of a better contractual relationship between factory and dealer as a result of the GM hearings, but he said he doubted that the problems could be solved "without the sanction of law."

Clearly, the senator was looking ahead to the introduction of his good-faith law.

Another bill of this type was introduced during that NADA convention. It was sponsored by Senator John M. Butler, Maryland Republican, and it stipulated that it would be unlawful for a manufacturer to threaten to cancel a franchise when the principal reason was the dealer's refusal to accept his factory's merchandise.

The Butler bill called for injunctive relief for the dealer in federal court until the case was heard, and it specified that a dealer damaged by cancellation could sue in federal court and receive twofold damages and court costs.

Nothing much was heard of the Butler bill; it seems to have become lost in the shuffle. But plenty was heard of the subsequent O'Mahoney bill.

When the new GM selling agreement was announced, O'Mahoney applauded the changes, but he didn't back off from his position that factory-dealer relations needed the sanction of law.

In April of 1956, the O'Mahoney subcommittee presented a staff report which said auto dealers still needed a law allowing canceled dealers to sue the manufacturer in court. The report took a dim view of guarantees claimed for the new GM franchise in that regard, and it called GM's umpire plan "untried and of questionable value."

A GM spokesman called the report unwarranted.

The subcommittee's report also said that an equity law "while not a panacea for all dealer problems" would be the simplest way to equalize the relationship between the factory and the dealer.

The tea was brewing, and it was about to come to a boil.

O'Mahoney introduced his bill in May. It was formally described as a measure "to supplement the antitrust laws of the U. S. to balance the power now heavily weighted in favor of the auto manufacturers by enabling franchised auto dealers to bring suit in U. S. District Courts to recover twofold damages sustained by reason of the failure of the auto manufacturers to act in good faith in complying with the terms of franchises or in terminating or not renewing franchises with their leaders."

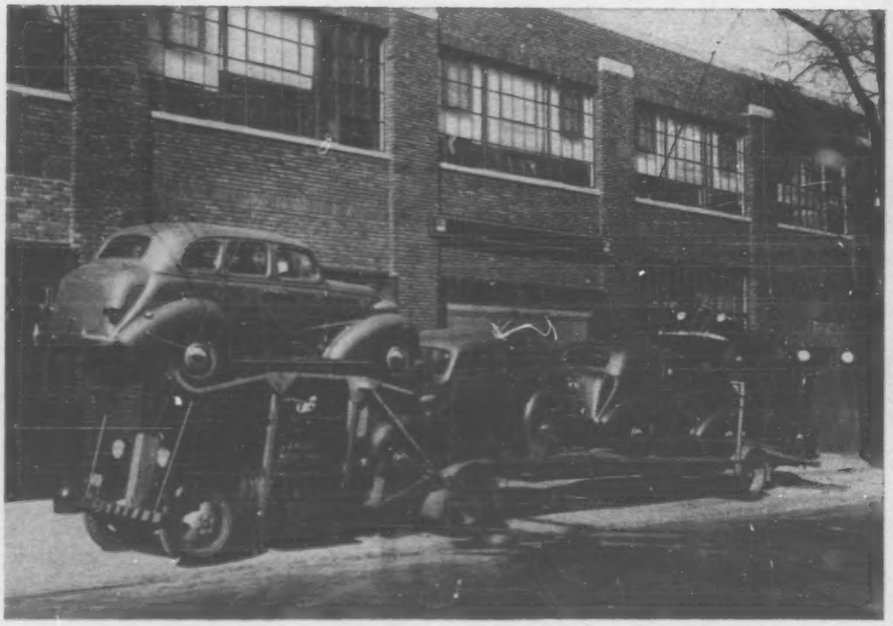
Good faith was defined as "the duty of the manufacturer, its employes, officers or agents to act in a fair, equitable and non-arbitrary manner so as to guarantee the dealer freedom from coercion or intimidation, and in order to preserve and protect all the equities of the auto dealer which are inherent in the nature of the relationship between the auto dealer and the auto manufacturer."

The Judiciary Committee passed up hearings and unanimously reported the O'Mahoney bill to the Senate floor. In mid-June, the Senate approved the measure after a three-hour debate by a vote of 75 to 1. The lone "nay" was uttered by Senator Charles E. Potter, Michigan Republican.

A floor amendment made the bill apply to dealers as well as manufacturers; a factory could defend

Delivering the goods

How GM got its automobiles to market



A typical auto transporter of the mid-1930s.

Back in 1908 if you wanted a General Motors car you probably came and picked it up yourself and drove it home. It wasn't long, though, before car dealers began to sprout up. They accepted the responsibility of getting the cars from the assembly plant to their showrooms where they could display them to potential buyers.

Of course, there was only one way to get the cars to the showrooms: Drive them. Some dealers hired men to bring the cars back for them, while others took advantage of the services of entrepreneurial brokers or driveaway companies.

The poor quality of the roads in those days effectively limited the distribution of even the big auto manufacturers of the day to a fairly small area. And even then, the weather frequently rendered the sand, dirt, and clay surfaces impassable. The head of one of the old driveaway companies recalled how even a short delivery in the 1920s was no small task.

"It was nothing to start out of Flint (Mich.) in the early morning and get as far as Holly or Fenton, 18 or 20 miles out of Flint, and have to put up there for the night by 9 or 10 o'clock that evening," said the head of Murray J. Dailey Driveaway in 1937.

As auto sales grew, so did these driveaway firms. Dailey Driveaway handled 116,000 cars during 1928-29, and employed more than 1,000 drivers. The companies improved on the inefficient one-man/one-car practice by using towbars to link two cars together.

But even in the early 1920s consumers and dealers were expressing a preference for fresh cars that had not been "driven through." Some of the driveaway firms anticipated the change and supplemented their operations with trucks that could carry two cars. The Dailey Driveaway company had 18 tractor-trailers in operation as early as 1921.

Later, in 1931, Dailey sold out to U. S. Truck Lines Inc. of Delaware, which merged the operation into a small general freight carrier named Anchor Motor Freight Inc. By that time the driveaway service had mostly given way to truck transportation.

Originally the driveaway firms and auto haulers solicited the car dealers for business. But in the mid-1930s, a major change was made: Chevrolet assumed control of the shipment of new cars to dealers, and GM's other divisions followed suit. The decision brought the manufacturers better control over their products as they moved through the distribution channels.

Anchor Motor Freight was selected as one of Chevrolet's principal agents, serving Michigan, Indiana, and Ohio. The carrier, which later was sold by U. S. Truck Lines and subsequently became the foundation of Leaseway Transportation Corp., is today GM's largest single car hauler, moving more than 25 percent of GM's total production.

Even in the late 1930s, the car-carrying truck companies were limited in their distribution of new cars to no more than a few hundred miles from the production plants, in most cases. Macadam road surfaces had made long-distance auto travel less treacherous, but the national highway system was still a patchwork.

Cars ordered from more distant points were frequently shipped by rail in various states of assembly. The railroads later developed special equipment that could accommodate four assembled autos in a box.

Faced with the growing competition of the railroads for the lucrative car-carrying business, the trucking companies improved the capacity of their equipment from two and three cars in the early 1920s to four cars per trailer by the 1930s. In 1932 Anchor Motor Freight introduced the double-decker trailer which enclosed the two bottom cars and carried two others on top.

State restrictions on trailer lengths limited auto carriers to the four-car unit through the '40s and '50s. At this time truckers came to dominate the auto-transport business. Their share rose to 61 percent in 1948 and to a peak of 85 percent in 1959. But by the late 1950s railroads were experimenting with new rail car designs; in 1959 they introduced "piggyback" transport of car trailers. Shortly thereafter they introduced the even more successful multi-level rail car, which attracted a large portion of the automakers' business.

The multi-level rail car forced many small motor carrier auto transporters out of business. But the carriers that remained fought to offset the railroads' advantage by pushing the allowable highway length limits in some states from 40 feet in the mid-1950s, to 48 feet, 50 feet, and then 55 feet. By the late 1960s, 60-foot trailers were permitted in a few states.

The liberalization of the length laws helped keep down the cost of delivering automobiles. The standard four-car trailer of the '30s, '40s, and '50s gave way to the five-car trailer and then in the mid-1960s, the six-car trailer. By the mid-1970s, trailers carrying nine cars were allowed to operate in most states.

In this period of resurgence, the motor carriers also benefitted from the creation of highspeed state turnpikes and later the interstate highway system. Meanwhile, rail service was declining; the speed and reliability of truck transportation more than offset the railroads' small price advantage.

Today the railroads have upgraded their operations and provide strong competition to the motor carriers. Fully enclosed multi-level rail cars protect the automobiles from the elements and from vandalism while enroute to the dealers.

Between them — and often in tandem—the railroads and specialized motor carriers transport tens of thousands of GM cars every day from assembly plants to dealer showrooms. And the innovations that have marked their services over the years continue.

For example, Anchor Motor Freight has won permission to use specially designed double trailers on selected highways. Anchor also unveiled a unique trailer called the AutoBox last year. It carries eight cars in one direction and can be converted in 10 minutes to handle a sizable load of general freight on the backhaul.

Perhaps the most significant innovation in auto hauling since the introduction of the double-deck trailer is a new computerized scheduling system developed by Anchor for General Motors. The system draws on GM's finished car inventory to build trailer loads that deliver the most cars for the least miles driven, within the constraints of service and loadability of the rigs.

It is estimated that this new system, combined with changes in production scheduling needed to fully drive it, will save millions of dollars a year in transportation costs.

The development of specialized transportation systems to bring cars from plant to market was a key element in the long success of GM. The company's early decision to control the distribution of its cars brought valuable stability and efficiency to the operation.

GM's control, combined with the efforts of the various transporters, hastened the penetration of the automobile into the farthest reaches of the American continent and helped keep the cost of a new car within reach of millions of Americans. □

itself in a lawsuit by asserting the failure of a retailer to act in good faith.

Another amendment knocked out the double-damages provision. Damages a dealer could obtain were limited to actual damages sustained.

Early in the debate, Potter tried, unsuccessfully, to have the bill recommitted to the Judiciary Committee so that public hearings could be held. That would have killed the measure because of the time element.

Time was extremely important. Supporters of the good-faith bill were working with one eye constantly on the calendar. Remember, 1956 was an election year, and one-third of the senators and all members of the House were anxious to get home and start convincing their constituents that they should be returned to Congress in the fall balloting.

• In the House, the bill was sponsored by Rep. Emmanuel Celler, New York Democrat and chairman of the Judiciary Committee. The committee adopted several amendments, the most important of which was a change in the definition of "good faith."

The new wording called good faith "the duty of each party to a franchise to act in a fair and equitable manner toward each other to guarantee the one party freedom from coercion, intimidation or threats thereof from the other party; provided that recommendation, endorsement, exposition, persuasion, urging or argument shall not be deemed to constitute a lack of good faith."

This was a concession to the factories. They had claimed that the Senate language would have precluded them from exercising normal sales efforts on dealers.

Late in July, the House passed the bill by a vote of 146 to 45—not as overwhelming a margin as in the Senate, but comfortable nevertheless. The Senate agreed to the House amendments by voice vote, so no conference was needed. Another time saver.

President Eisenhower signed the measure on Aug. 8, 1956, although he said he did it "reluctantly."

He said he normally would consider it an intrusion of the federal government into private business, but he said he was signing it because it represented a serious congressional effort to deal with auto-industry abuses which Congress had found to exist.

Thus ended the "Year of the Dealer."

• The good-faith law has been on the books for 27 years. It is one of the most vital pieces of auto dealer legislation ever passed by the United States Congress, but it is not easy to pinpoint the exact results of the measure.

One thing it is not: It is not an "open sesame" that enables a disgruntled dealer to raid the treasury of the manufacturer.

A dealer cannot drag a manufacturer into court and expect to win his case simply by alleging "coercion" or "intimidation" or "lack of good faith." The federal courts are not pushovers; the dealer must have a well-prepared and well-documented case if he hopes to prevail.

And, as noted above, the good-faith sword cuts both ways. A shoddily presented case by the retailer could run up against a claim by the manufacturer that the dealer, himself, failed to act in good faith.

There is, however, no doubt that the law has been effective. Perhaps its greatest value has been as a deterrent, a barrier against a repetition of the practices that spawned the legislation in the first place.

The factories know it is there; the dealers, their attorneys and their trade associations know it is there, and all parties know it can be invoked when needed.

In the past quarter-century, there has been no full-scale dealer rebellion like that of 1955-56. Maybe that is the prime testimonial to the worth of the good-faith law.

That's not to say that factory-dealer front has been completely calm and quiet at GM or anywhere else in the intervening years.

Factory-dealer relations can never be perfectly tranquil. The manufacturers are sometimes rather imperious in communicating with their retailers. And the interpretation of a factory directive may suffer as it proceeds from central office to region to zone to district (the GM chain) to dealer.

And dealers resent factory interference, especially if it means more paperwork or if it increases their cost of doing business. Dealers are highly independent individuals. Most of them are capable businessmen. They're generally prosperous (although they suffer mightily during a slump like the current one). And they "don't take nothin' from nobody."

The elements are present for constant turmoil. The two sides get along as well as they do because of the efforts of a lot of competent, hard-working people in both camps.

• As mentioned above, the 1956 franchise remains the basic document at GM. Changes have been made to meet new situations in the industry, but there has been no allout reworking of the selling agreement.

One of those changes came in 1965 when Cadillac switched from a dealer-under-distributor to a direct-dealer type of distribution. Cadillac had been setting up a field organization for some years, and it told its distributors in 1960 that they were signing their last five-year contract as distribtuors.

The distributors weren't surprised, but they probably weren't overly pleased, either. As distributors, they received an extra discount (about 2 percentage points) on the cars they moved to the dealers under them. It was a nice piece of change. After 1965, the former distributors could continue as regular dealers if they wished.

The change was unnoticed by most GM dealers, and it didn't create any problems at Cadillac.

The 1975 franchise contained potential fireworks, but the situation was defused, largely through the efforts of William E. Hancock Jr., NADA president, and John J. Pohanka, Hancock's successor as head of the dealer organization. Both are GM dealers.

An NADA analysis found that the 1975 GM contract had several provisions that were stricter than those in the 1970 pact. Most onerous, NADA said, was a clause stipulating that GM could terminate a dealer immediately for any false claims or supporting statements to GM by the dealer or his employes, even if the dealer did not know of the false statement.

It was believed that this provision stemmed from a warranty fraud in the Northeast that was dubbed "Motorgate," but a GM dealer relations official denied that that was the case.

Other objections by NADA and dealers to the franchise involved dealer participation in advertising and sales promotion programs; an apparent requirement that the dealer get into rental and leasing if GM thought it was a good idea, and rules on the disclosure of use of dealer facilities which, NADA felt, might impede a GM dealer from taking on an import because GM might force the dealer to expand his facilities.

When the NADA analysis was released, Hancock remarked that NADA had held "what we thought were meaningful talks" with GM officials for over a year in regard to the new contract, but "it is amazing what happens to the work of reasonable men when it gets to the GM financial and legal departments."

• All the ingredients for a major blowup were present. The franchise was signed by GM dealers ("What alternative did they have?" Hancock asked) and went into effect Nov. 1, 1975, but NADA continued to work for modification.

The efforts bore fruit. Early in 1976, GM sent a letter to its dealers which spelled out its intent and policies regarding the new pact. The letter interpreted the clauses which dealers found unduly harsh and restrictive and eased apprehension at the dealer level.

For example, on the false-statements issue, GM said such actions would not bring termination unless they were "so contrary to the spirit, nature, purpose or objectives of the franchise" as to warrant termination. And the circumstances would be discussed with the dealer and reviewed by the divisional field and central office sales management as well as corporate management.

Said Pohanka, "This is a way of changing by letter rather than rewriting the whole agreement. We have a legal instrument that will stand up in court."

Hancock said the letter was "responsive to important dealer questions and makes a contribution

Providing the capital

Motors Holding: 'One of the best ideas'

Any discussion of GM and its dealers would be incomplete without mention of Motors Holding Division, a unit of the Sales and Marketing Staff that helps provide the capital needed by newly appointed GM dealers.

Alfred Sloan called it "one of the best ideas we ever had in the distribution field."

Motors Holding has been in business 54 years and has invested $665 million in 3,200 dealerships.

There are 415 on the books today in the U. S. and Canada. Of the other 2,785, some 2,350 dealers have paid back MHD and have become full owners of their businesses. That's a buyout rate of nearly 85 percent.

It's been profitable for GM, too, since MHD shares in the profits of the dealership during the buyout period. The $665 million has not been advanced by the corporation strictly out of benevolence.

Motors Holding started almost by accident. In the late 1920s, GM put up a goodly amount of money to save a couple of strategic dealerships from bankruptcy and sustained a loss of $200,000.

Sloan wrote in My Years with General Motors: "One thought leads to another, however, and when we got this one generalized, we realized that our broad purpose should be not only to reduce dealer turnover by subsidizing dealerships, but furthermore to assist capable individuals, who lacked capital, to become the owners of profitable GM dealerships."

The project was turned over to Albert L. Deane, who was a vice president of GMAC, and to Donaldson Brown, whose name seems to surface in just about every GM activity involving money during the Sloan era.

Motors Holding Corp. was formed in 1929 with Deane as president. It became Motors Holding Division in 1936. GM put up $2.5 million to get it off the ground.

Sloan wrote, "When we got past the experimental stage, we realized that this was one of the best ideas we ever had in the distribution field.

"We also realized that its real value was not in the first idea of salvaging bankruptcies, but in the second idea of grubstaking capable men—not only with capital but with management advice and training in sound dealership operations."

• In that best-seller of 20 years ago, Sloan summed up the value of Motors Holding to GM in these words: "Through its intimate association with dealers in the Motors Holding operation, General Motors has obtained a clearer and more intimate knowledge of dealers' problems.

"Motors Holding has also provided the corporation with a better knowledge of the retail market and consumer preferences.

"But more important than anything else, it has been useful in the development and maintenance of a strong, well-managed, adequately capitalized dealer body."

And the GM patriarch couldn't resist a well-mannered jab at the corporation's rivals, noting that similar plans had been adopted by Ford Motor Co. in 1950 and Chrysler Corp. in 1954. He quoted Herbert M. Gould, a former MHD general manager, as saying, "When your competitors follow you, that's the medal in business."

In his book, Sloan mentioned some facts and figures for Motors Holding's first 33 years (1929-1962). Comparing those numbers with today's shows the growth of the division in the past 21 years and also the tremendous increase in the financial requirements of today's dealerships.

From 1929 through 1962, MHD invested some $150 million in 1,850 dealerships in the U. S. and Canada.

As of mid-1983, the overall total had risen to $665 million invested in 3,200 dealerships.

That means that MHD has invested $515 million in 1,350 dealerships since 1962.

At the end of 1962, the division had investments of $32 million in 457 dealerships in the U. S. and Canada.

In June of this year, total investment was $180 million in 415 outlets ($160 million in 360 U. S. dealerships and $20 million in 55 Canadian points).

• In its 54 years, Motors Holding has had only three bosses. Deane ran things from 1929 to 1949, and Gould was general manager for the next 10 years. Current chief is William Harvey III, who has been with the division since 1948 and who has been general manager since 1959.

His 24-year tenure is probably the longest in GM history for the general manager of one division.

It's GM smallest division with 130 employes in the U. S., four in Europe. It has responsibility for Motors Holding operations in the United Kingdom and West Germany and overview activities in Australia and South Africa.

In the U. S., the average investment in a GM dealership today is about $500,000. Sometimes more, sometimes less; the size of the dealership determines the actual amount.

Of that $500,000, the dealer applicant generally puts up about $125,000, or 25 percent, with Motors Holding supplying the rest.

Those numbers are for working capital and fixed assets; they do

toward removing dealer objections to the agreement."

Pohanka and Hancock led the NADA officials in the meetings, and Hancock praised the help of GM Chairman Thomas A. Murphy and President Elliott M. Estes.

In addition, NADA's GM Make Committee, headed by Walter W. Stillman and including the chairmen of GM's six national dealer council's, met frequently with the NADA legal staff to determine and specify the nature and scope of dealer objections to the franchise.

It was a case of solving a problem by negotiating rather than by confrontation.

Did GM back down? Did NADA tame the giant? Does it really matter? The important thing was that a difficult situation was settled amicably. □

The Martin-Senour Difference

Your NAPA Jobber's got it all!

Busy shop pros know they can count on *this* performance team: their NAPA jobber and his exclusive line of Martin-Senour® refinishing products. Choose from Acrylic Lacquer, Acrylic Enamel, Synthol Enamel, Nitram Acrylic Urethane Enamel . . . for easy application, workability, durability, gloss. Special thinners, reducers, and undercoats round out each system. Martin-Senour abrasives, tapes, adhesives, and specialty products give top performance under all shop conditions. Just call your NAPA jobber for *all* your refinishing needs. He'll deliver.

Because he's got it all!

MARTIN SENOUR PAINTS

Paints, Tapes, Abrasives and Adhesives

This is the plaque a GM dealer receives upon completing the buyout of the Motors Holding interest in his dealership. It's called the Oak Tree Award.

not include real estate investment.

Motors Holding may supplement its regular or franchise investment to cover real estate. At least half of the facilities cost must be obtained by a conventional mortgage loan. The balance may be supplied by MHD under a prescribed formula.

In the last 10 years, Motors Holding and its dealers have invested about $135 million in real estate, not including mortgages.

The $500,000 average is about double what it was 15 years ago, which is natural because dealerships are much bigger now.

Harvey mentioned inflation and the general economic situation as contributors to the higher number plus the fact that today's dealership is "more sophisticated" in terms of electronic equipment, diagnostic systems, accounting systems.

"Everything costs more and is more complicated," he said. "Parts are more complex, just as the cars are."

The dealer normally provides 25 percent of the required money for working capital and fixed assets but, Harvey said, "This is a policy we waive with some frequency.

"Our basic mission is to attract the best competitor, and the best competitor is often not the one with the most money. He may be younger, and may not have had the opportunity to accumulate $125,000 after taxes.

"We will stretch a point for a good, solid, experienced person of superior qualifications."

• A dealership in which Motors Holding is involved has a three-person board of directors. The dealer-operator is president, and the other two directors are the MHD branch manager and regional manager.

Said Harvey, "We feel very strongly that the president must have all the freedom he needs to run the dealership his own way—hiring and firing, merchandising, etc."

The dealer repays MHD's investment through his share of the dealership's profits, which he receives in the form of dividends and bonus. As the dealer's equity in the company increases (through the buyout process), his share of the profit increases and MHD's share decreases.

There is no fixed term for the buyout, but Harvey said it usually occurs between five and six years. Perhaps 6½ years now, in these less-than-ideal days for the retail auto business.

That's a bit longer than in the mid-1960s, when the buyout time averaged a little less than five years.

If the dealership is losing money, Harvey said MHD will stick with the dealer "as long as there is any reasonable prospect of success.

"The attitude, character and ability of the operator are the principal determinants," he said. "Most failures are the result of management failure, rather than economics."

A prospective dealer goes to Motors Holding for financial assistance only after being chosen by the vehicle division. He cannot get MHD approval first and then use it as a lever to obtain a franchise.

If MHD turns him down, his franchise application isn't dead, but he must arrange financing elsewhere.

Is Motors Holding a banker?

"Not really," Harvey said. "We can cope with a greater spectrum of risk than other lenders because we have a more complete understanding of the risk and the management required for success in this field."

He added, "Money is the easiest part of our business. The most difficult part is knowing how much assistance to give through our branches.

"It is destructive to interfere with a dealer who is performing well. It is also destructive to ignore a dealer who is not." □

One of Buick's oldest

Stillman & Hoag started in '08

Horseless carriages vied with horse-drawn buggies for road space, and scaring horses with a clackity engine or a backfire was an occurrence that provoked either anger or amusement during the automobile's infancy.

The auto industry was barely a decade old in 1908 and America was filled with an exuberance that wouldn't wane until the realities of World War I struck the nation. But that was 10 years away and the automobile, for all its faults, was the transportation wave of the future. Grabbing onto that future, at a time when buying an automobile was literally buying a kit (this was the original "kit car" age) were Walter "Colonel" Stillman and Daniel Hoag. The two men decided to change businesses and start assembling automobiles.

From that beginning Stillman & Hoag Buick was founded. Today it is one of the oldest and one of the largest Buick dealers in the nation.

The dealership, located in Englewood, N. J., has sold Buicks from 1908, before Buick Motor Co. became part of General Motors. Obviously the car business was entirely different in those days.

Walter "Bud" Stillman, son of the founder and chairman of the board of the firm, noted that the dealer franchise system used today was unknown. Instead manufacturers sold their vehicles to distributors who in turn sold them to retail dealers. Stillman & Hoag became a franchised Buick dealer in 1917 when the system was founded. By then, Stillman said, the company was "down to selling Buicks" since the other marques they started with in 1908 — Locomobile and Haynes — had left the automotive scene.

"Bud" Stillman formally started working at the dealership when he was 17, though, as with any family business, he was part of it since childhood. He began in the service department, which was more a repair shop with a blacksmith as part of the operation. The blacksmith was needed to forge parts for cars.

After working at the dealership through high school and during summer vacations from Cornell University, Bud joined the business full time as a salesman following graduation.

In the early 1920s, selling cars was entirely different from today, he recalled. Yes, there was a showroom, but business was not done there; cars were sold at customers' homes.

"Autos were merchandised door to door," he said. "There was a different feeling about cars; people

were really interested and the salesman had a closer relationship with customers than today."

The dealership had three salesmen, plus "Colonel" Stillman and Daniel Hoag who also sold cars. Each salesman had a territory to cover, and could work 75 to 80 hours a week, keeping in touch with customers by phone or, if in the neighborhood, stopping in to chat for a while.

Customers expected such personal treatment. Even when his father or Hoag sold a car, Bud Stillman said, the salesman received a small commission and the customer was turned over to him for personal attention.

While car selling is not operated on a door-to-door basis today, Bud Stillman maintains that most sales are lost because sales people are unable to develop personal relationships in a showroom environment.

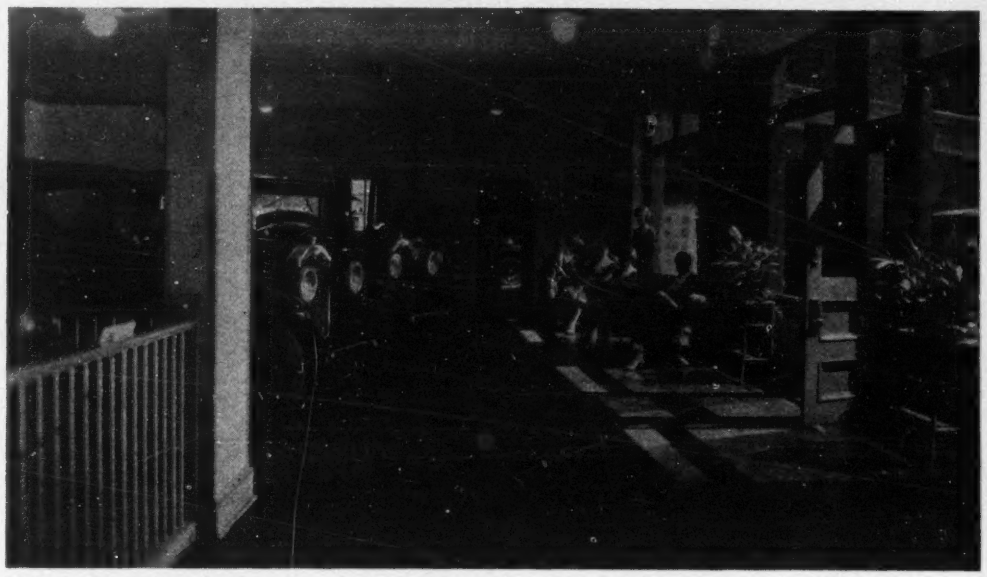
"Selling was a matter, in those early years, of knocking on doors during the day and stopping by during the evening for a demonstration ride," Stillman said. "It was also placing cars at strategic locations, such as the railroad station, and trying to convince commuters they would be happier with a car."

In 1930 Daniel Hoag died and by 1932 "Colonel" Stillman became sole owner of the company, although its name has been retained to today. The name was retained because the company had developed a reputation in its market area.

In 1937 the "Colonel" died, and Bud became president of the company. By 1939 the dealership outgrew its original location on Engle Street and moved to its present location on Grand Avenue.

By the time car production stopped during World War II, the company was selling 600 new cars and 350 used cars a year. During World War II, Bendix Corp. used the service area of the dealership for U. S. Army work.

After the war other parts of the Stillman & Hoag operation began to take shape. Bud started a leasing and rental business to capitalize on postwar pent-up demand for automobiles, and the lack of supply. He also formed Englewood Tire Distributors.



The Buick sales showroom of Stillman & Hoag in the early 1920s.

Bud has been active in dealer affairs for years. He served as president of the New Jersey Automobile Dealers Assn., as New Jersey director for the National Automobile Assn., and recently received a plaque from the Automotive Hall of Fame.

After 26 years at the helm of the dealership, Bud moved up to chairman in 1972 and his son, Robert, became the president of the company.

Robert Stillman noted that while the company can't offer the personal touch of the old days, since it sells 1,500 new and 350 used cars a year, and works on as many as 120 a day in the service department, it still tries. He and his father both spend time in the showroom.

Robert's career in the family business is a replay of Bud's. At 16 he started in the service department as an apprentice mechanic. He worked at the dealership during high school and college, moving to various positions including service dispatcher and parts assistant. After graduation from Cornell, Robert served in the Army, then returned to work in the leasing operation of the company. In 1962 he returned to the dealership as operations manager, became general sales manager, then president.

The Buick product is the backbone of the business, Robert acknowledges, stating that "we started with them (Buick) and they are the key."

During his 33 years with the business, Robert said, consumers have changed: "Their expectation levels are higher and they expect more; consequently, service is extremely important to the overall operation."

Stillman & Hoag marked its 75th anniversary this year. In recognition of that diamond anniversary year, and the fact that Stillman & Hoag has been family operated since its inception, Bud and Robert Stillman were presented a special plaque, personally, by Buick Division general manager Lloyd E. Reuss.

Encased in the plaque is a letter from GM chairman Roger B. Smith and president F. James MacDonald.

Before long the fourth generation will enter the Stillman & Hoag family business, as John, Robert's son, joins his father and grandfather, who promise that the young man "will start as an apprentice." □

Opening up the West Coast

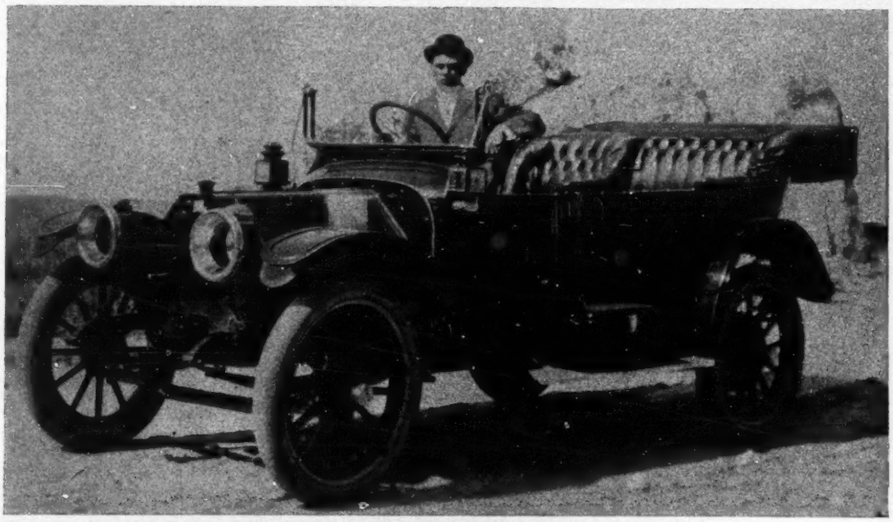
'You had to teach . . . to make a sale'

Seventy years ago in the small, orange-growing community of Redlands, Calif., some 60 miles east of Los Angeles, a car dealer who sold Franklins and Columbus Electrics took on a Buick franchise.

The Buick business outlived the other two car lines and the man himself, who nonetheless would see his sons take over the dealership and take pride in the prospect of it passing along to a third generation. It is by far the oldest General Motors dealership held continuously by one family in Southern California.

GM was five years old when Bert S. Hatfield, in partnership with a general agent from the Santa Fe railroad, by the name of Pettibone, acquired the Buick franchise here. At that time Buicks were handled on the West Coast by Howard Brothers Co., a distributor located in Los Angeles.

Hatfield, who was 29 at the time, had moved to California from Columbus, O., four years earlier. Son of a farmer and graduate of a technical school in Columbus that made him the equivalent of an electrical engineer, Hatfield sold electric cars that hailed from his hometown. Hatfield's son, Robert S., who runs the dealership with his brother John, said his father would travel to the port in San Pedro, south of Los Angeles, to pick up electric cars which were shipped from the East Coast via the Panama Canal. "It would sometimes take him two days to get back since the range on the batteries was so limited," Hatfield said.



Bert S. Hatfield, around 1913, with his first Buick demonstrator in Redlands.

Back then cars were primarily the province of the wealthy, and Redlands, thanks to its climate, was home to well-off citrus farmers and the rich from the East who would winter in the Southern California town.

Since the automobile was a relatively new invention, many of Hatfield's customers didn't know how to drive. "You had to teach them if you wanted to make a sale," Bob Hatfield said. In those early days the elder Hatfield operated out of what was once a stable, renting the facility for 25 years before moving across the street into a more conventional car dealership.

"That building (the stable) was located right next to the Elks Club, which was the center of the community in those days," Hatfield said. "He used to sell 50 or 60 cars a year. Service was very important, people couldn't drive to San Bernardino (less than 10 miles away) without needing a new tire or something."

Addition of the Buick franchise meant fewer trips to the port in San Pedro since the Buicks arrived in Redlands by rail. Some of Bob Hatfield's earliest memories are of going to the rail yards when the new cars came in. "I remember going down there with a crowbar and prying off the wooden blocks that were nailed down to hold the cars in place," he said.

Like GM, Hatfield Buick has weathered the ups and downs of the economy, surviving wars, the Great Depression and recession. "During World War I my father told me that cars were hard to get, and of course, during World War II they weren't building any cars," Hatfield said. Once during WWI, when meat was hard to get, Hatfield said his father took a stake in a farmer's lot of pigs as down payment on a car. The elder Hatfield was promised his money once the pigs went to market. "Well, my father went over to see this farmer to check on the pigs and the farmer told him, 'I don't know where they went'." That was the last time Hatfield Buick dealt in livestock.

While the '20s were good for the dealership and the town prospered, the Depression was one of the most difficult times, Hatfield said. "There were '32s on the showroom floor until the '33s came out," Hatfield recalls. "It was difficult." Staying in business depended on "how much money flow you had. Some things haven't changed a bit over the years," he said.

As bad as the Depression was, the late '30s saw somewhat of a boom as President Roosevelt sought to prime the pump by giving WWI veterans cash payments of up to $1,000. "We sold as many or more cars in '36 as we did in

'34 and '35," Hatfield said.

Then WWII came and Bob and John Hatfield were called to war. When they returned, there was no question of what they would do—they both came back to the dealership.

"John's always handled the service side and I handle the other part," Hatfield said. While both attended school in Redlands, they worked at their father's store. "I found myself neglecting school, I wanted to have a shift at the store. My brother was the same way," Hatfield said. At the time, "none of the (dealer) heirs really wanted to go into it. To them there was no career to follow."

Bob and John were different. Bob went on, after the war, to attend General Motors Institute in Flint, Mich. In the early '50s the brothers began buying into the store.

Those postwar years were good, Hatfield recalls. "My father used to tell me, 'We don't need salesmen, we need someone who can get us cars'," he said with a chuckle.

It was during that period that one of GM's luminaries visited the Hatfield showroom. "Harlow Curtice (who became president of GM in the 1950s) came here once," Hatfield said. "There was a sales meeting up in Las Vegas and I remember riding out here with my father and him (Curtice) because we were so close to Palm Springs."

It's people Hatfield remembers the most, from Curtice to neighbors who've bought cars time and time again. "The car business is fascinating, there's something different everyday," Hatfield said. While his father, if he were still around today, might recognize some of the names of the customers and that cash flow is still important to business, there are other things that aren't the same. Noting the clicking sound from a computer terminal in the next room, "Can you imagine a place this small with a computer?" Hatfield asked.

Despite the changes, Hat[illegible] has developed a philosophy towards the business that has served him well. "My father used to say, 'Don't worry about the future, it can only get worse'," Hatfield laughed. "But you learn over the years that (business) isn't always going to be so good and it's always not going to be so bad. In a small area like this, you know if you've sold a lot of cars in a couple of years that you've pretty much saturated the market and things are going to be slow for a little while."

While Hatfield remains active in the store, he is secure in the thought that the franchise will remain in the family name for at least another generation. John's son, Bill, has been working at Hatfield Buick for eight years now, starting as a salesman and moving up to sales manager. "He's a natural," Bob Hatfield said. "He's almost repeating my career." And somewhere, maybe, Ben S. Hatfield is smiling. □

Irving J. Demarest, center, was Chevrolet's oldest dealer in point of individual service when he retired in 1982, after heading I. J. Demarest Inc., Westwood, N. J., for 68 years. Presenting a plaque to Demarest are, left, William K. Gerrard, Chevrolet Atlantic Coast regional manager, and Edd Roggenkamp III, Newark zone manager.

AC Sphinx

A sparking company

While the auto industry was going through its birth pains in the U. S., an equally vibrant industry was being born in England. Some segments of the British industry were to become parts of General Motors.

Sphinx Manufacturing Co., founded in Birmingham, in 1898, provides an early example. The company was created by H. G. Longford and William A. Clark to make small components for autos. By 1902 it had found its niche; it was making spark plugs by the thousands, and plugs remained its mainstay for decades.

In 1922 AC Spark Plug Co. Ltd. was formed in England by Albert Champion, the bike racing star who had just created AC Spark Plug Co. in Flint, Mich. The firm in England was set up to distribute the U. S. company's goods in England and the European continent.

In 1923, at the instigation of Champion, AC Spark Plug Ltd., amalgamated with Sphinx to form AC Sphinx Sparking Plug Co., Ltd. Ownership of the new company was shared equally by Lonford/Clark and AC Spark Plug.

Later that year Champion bought Longford's share for $65,000. After Champion's death in 1927, Basil W. deGuichard, the new president of AC Spark Plug in Flint, bought Clark's 25 percent for $64,000. As a result the new English company became solely owned by AC Spark Plug of which GM owned a majority share.

GM purchased the remaining stock of AC Spark Plug from the Champion family in 1933, at which time AC Spark Plug, along with Sphinx in England, became a full-fledged division of GM.

If one term characterizes GM in the United Kingdom it is growth. By 1946 it had five distinct organizations there. AC Sphinx Sparking Plug, Delco-Remy and Hyatt, Ltd., Frigidaire, Ltd., General Motors, Ltd., and Vauxhall Motors, Ltd.

At that time, GM consolidated into two divisions, Vauxhall Motors and General Motors Ltd., with AC Sphinx, Delco-Remy-Hyatt and Frigidaire becoming part of GM Ltd. The name AC Sphinx Sparking Plug was changed to the simpler AC Sphinx Division.

A GM Ltd. Vehicle Division was established in 1967, and by the mid-1970s GM Ltd. had plants in five locations in England—Dunstable, Southampton, Liverpool, Wellingborough and Hendon. All were devoted almost entirely to making AC Delco components. □

Porsche set for takeover of its U.S. sales from VW

By Richard Feast
European Editor

FRANKFURT, West Germany. — The Porsche factory is well advanced with a plan to take control of its own distribution in the U. S.

No confirmation of any pending divorce from Volkswagen of America was forthcoming at the International Auto Show here last week, but Porsche Chairman Peter Schutz said, "The clock is running."

Carl Hahn, chairman of the VW Group, said, "I have no comment to make about these suggestions."

Noel Phillips, president of VWoA, said, "The contract has not been canceled, but we are negotiating on the way in which the operation is run."

Any change would come after a market study is completed by Richard O'Leary, a Minneapolis lawyer who was appointed when his old friend Schutz became chairman of Porsche nearly three years ago.

It would have dramatic repercussions for the financially troubled VW Group which has handled Audi-Porsche sales in the U. S. since 1969. Any split off of Porsche would not involve the Audi-VW link in the U. S.

The U. S. will account for half of Porsche's 40,000 output this year. Porsche (and more recently Audi) business has been one of the few bright aspects of VW's recent record in the U. S.

A change would undoubtedly be stimulated by Porsche's desire to handle its own sales — and thus profits — directly. It has its own distribution in the domestic market and handles sales in key export markets like Great Britain and France either directly or with joint ventures.

Said Schutz, "We have a responsibility to the Porsche owner, to sell a car in the manner he wants, how he wants, when he wants.

"None of these things is happening right now."

• The agreement between VW and Porsche has been renewed every two years, but senior executives from both companies hint that there are get-out clauses in most contracts.

Schutz said Porsche is considering several options for its long-range planning. But the feeling is that it should change when Porsche is in a position of strength — which it is right now.

"Our rivals are getting stronger, and we have no exclusive rights on building fine cars with a reputation for engineering excellence," he said.

At present, Porsche has about 330 dealers in the U. S. It is looking for sales of around 20,000 this year, compared with 14,407 last year.

While the plan for the orig-

Saab sheds its top

Design study car at Frankfurt

A Saab convertible, a design study car based on the new 900 Turbo two-door, is on display at the Frankfurt Auto Show. It features an electric retracting glass rear window operated from the driver's seat, a rear spoiler mounted on the upper back panel and sculpted into the belt trim moldings, a sweptback windscreen, 175-HP 16-valve turbo engine and leather upholstery. Top speed is estimated at more than 125 MPH. The design study car was built by ASC, Inc., Southgate, Mich.

Imports virtually gone with 25-day stock

U.S. inventory is 55 days, spotty

By Richard A. Wright
Assistant Managing Editor

While the domestic new-car inventory appeared to be healthy at 55 days on Sept. 1, the import pipeline was just about dry as the stockpile of new cars from overseas dropped to an incredible 25-day supply.

In fact, the 55-day supply of domestics was not as strong as it might seem. The actual number of U. S.-built new cars in stock dropped during August from 1,102,103 on Aug. 1 to 1,087,570 Sept. 1.

Stocks in some lines were low enough that sales suffered in August, all of which resulted in a higher days-supply figure (it was 48 days on Aug. 1), but in fact a weaker inventory situation.

In addition, that lower inventory figure of 1,087,570 included a number of new entries, such as Chrysler Laser, Dodge Daytona, Pontiac Fiero and American Motors/Renault Encore, for which no selling rates had yet been established.

On the import side, the inventory totaled only 195,418 new cars, a 25-day supply, compared with 227,819, a 26½-day stock, a month earlier. As was the case with the domestics, import inventories were so low that they kept a lid on sales, resulting in a days-supply figure that actually overstated the inventory.

Import dealers also had a meager 30-day supply of pickup trucks, which was 61,068 units, compared with a 52-day supply, or 88,209 units, a month earlier.

• The domestic new-car inventory was divided this way Sept. 1: General Motors, 56.57 percent; Ford Motor Co., 26.18 percent; Chrysler Corp., 12.63 percent; AMC, 3.20 percent, and Volkswagen of America, 1.42 percent.

A month earlier, the domestic inventory was divided as follows: GM, 59.85 percent; Ford Motor Co., 23.05 percent; Chrysler Corp., 12.97 percent; AMC, 2.63 percent, and VWoA, 1.50 percent.

GM had a 52-day supply Sept. 1, up from a 47-day stock a month earlier. The inventory was higher, partially at any rate, because of depressed sales rates due to lean inventories of J-cars and some standard and luxury lines. Lowest domestic nameplate stock of all was Corvette, at 23 days.

Ford Motor Co. entered September with a 63-day supply, up from 49 days a month earlier. Here again, August sales were hurt by shortages of Escort, the company's top-selling car. Ford was also selling off stocks of the discontinued Fairmont and Zephyr lines.

Chrysler Corp. had a 57-day supply Sept. 1, up from 48 days a month earlier. The corporation's well-balanced stock was the lowest in big cars.

AMC had a 52-day supply

Chairman expects first 10-million-car year since 1979

GM's Smith sees 13.5 million sales

By Al Fleming
Industry Editor

General Motors is back in the forecasting game.

GM Chairman Roger B. Smith last Wednesday predicted U. S. car and truck sales will total 13.5 million in the 1984 model year, a 15 percent increase over 1983.

He looks for '84 sales of 10.2 million cars and 3.3 million trucks.

It was the first official annual sales prediction by GM since December, 1980, when Smith, about to succeed retiring Chairman Thomas A. Murphy on Jan. 1, 1981, said GM was looking for sales of more than 10 million cars and more than 2.7 million trucks for a total of "at least 13 million" for 1981.

As it was, '81 calendar year sales fell far short of that mark, with 8.5 million cars and 2.4 million trucks.

Since then, as the industry suffered through economic and marketing doldrums, GM has kept its forecasts to itself—until last week, when Smith spoke at a "Food for Thought" luncheon series at the Recess Club in Detroit.

Apparently the prospect of a revived economy and new-vehicle market prompted GM to go public with its 1984 model-year prognostication, which Smith said is "based on our view of the current economic outlook."

Should the outlook prove accurate, 1984 would become the first 10-million-plus car year in five years. It also would be the best car-truck total since 1979 when 14.7 million new vehicles were sold.

The improvement in 1984 would be about equal to gains posted in 1983 when some 8.8

Cutlass Cruiser

Olds replaces its midsize wagon

Olds replaces its rear-drive Cutlass station wagon in 1984 with the roomier Cutlass Cruiser, based on the front-drive Cutlass Ciera A-car. With the increased cargo capacity, sheets of plywood can be hauled; with an optional third seat, there's room for eight. More on the new Olds models on Page 36.

NEWSPAPER

Danforth pushing Senate mandate

Air bags called unlikely with Reagan in office

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — Two Administration officials — Diane Steed, whose name President Reagan has sent to the Senate for consideration as the new head of NHTSA, and Christopher DeMuth, head of regulatory affairs for the White House Office of Management and Budget — said no decision has been made on the passive restraint standard.

Senator John C. Danforth, Missouri Republican, however, feels strongly that no air-bag/passive belt standard will emerge so long as President Reagan remains in office.

In other words, regardless of what happens to the rulemaking at NHTSA starting Oct. 15, the philosophical bent of the Administration makes any NHTSA decision irrelevant.

The Danforth omnibus safety bill is set for markup tomorrow (Sept. 20) and while it may be reported from committee, Senate passage is extremely unlikely this year, much less final Congressional action.

The Danforth measure — opposed in almost all areas by the Administration — mandates air bags for '86-model cars and mandates anti-lacerative windshields, high-mounted stop lamps, and 5-MPH bumpers for '85 models.

It also urges a standard for greater side protection, plans for a Car Book and strengthens truck safety provisions. It also sets 21 years as the minimum drinking age and addresses problems of interstate motor carriers and transportation of hazardous materials.

Early testimony from the auto makers showed lack of support although Ford Motor Co. showed interest in becoming a supplier of driver-only air-bagged cars for the government test fleet.

• Last week, MVMA filed a statement which said Congress should not legislate design standards; instead, if standards are to be set, they should be done administratively by NHTSA after appropriate procedures and with acceptable leadtime.

In last week's hearing, even though Steed insisted she had not made a predetermined decision and absolutely denied receiving any "marching orders" from the Office of Management and Budget or from the White House, she admitted there was a "public perception" of White House disposition against passive restraints.

Steed further assured Danforth that NHTSA would make its decision in "considerably less" than a year. It will be "open and objective" and in line with the court's order to consider such alternatives as air bags and nondetachable belts. She does not plan "extensive new studies" and denied any intent to delay."

Danforth and others — young picketers who were removed from the room by Capitol police when they stood up to call DeMuth a "killer" — stressed that in the case of air bags, delay

New roof for Ford LTD Brougham

The 1984 LTD Brougham has a new roof and a revised rear pillar/window treatment. LTD powertrain changes include the addition of electronic engine controls and the replacement of the 3.3-liter six-cylinder engine with a more powerful 3.8-liter V-6 with electronic fuel injection on the station wagon. Ford's new models go on sale Sept. 22.

Increase for '84 amounts to 2.3 percent

Ford hikes prices by $254 average

By John K. Teahen Jr.
Managing Editor

In the introduction-day price sweepstakes for 1984 cars, the tally sheet reads: Ford Motor Co., $254; General Motors, $232.

Who won? That depends upon whether you're a factory person who relishes the extra bucks or a would-be customer who abhors all price hikes.

Ford's $254, announced last week, amounted to a 2.3 percent boost. GM's $232, posted in late August, was 2 percent. Ford's breaks down into $216 on base vehicles and $38 on options. The GM breakout is $180 and $52.

Both companies' increases were rather moderate in comparison with those of the late '70s and the first couple years of the '80s, but they gave rise to a nagging question: Is this the end?

That question must remain unanswered. The manufacturers won't talk about what prices may be two, three or four months from now. They won't even talk about what prices may be tomorrow morning.

In announcing their hikes, both Ford and GM used the method most advantageous to the factories. They compared '84s and '83s on a comparably equipped basis.

This means that they adjusted the prices of the '83s to reflect equipment additions or deletions. A straight sticker-to-sticker comparison would have meant larger increases than those announced.

• Ford Motor also revised its dealer discounts on some models. All Ford EXP and Mustang and Mercury Capri cars now carry a 15 percent discount (before holdback). For '83, it was 12 percent on the base model and 16 percent on others.

For Ford Escort and Mercury Lynx, the '84 dealer discounts are 12 percent on the base model and 15 percent on others. For '83, they were 12 and 16.

There were no changes in destination charges for '84.

Ford's biggest increases were on its larger cars.

Starting at the bottom of the list with the subcompacts, the price leader in the Escort line is $5,629 for '84, down $10 from '83 (no equipment adjustment). Lynx starts at $5,758, up $7. A diesel engine for Escort is $558 and includes five-speed transmission.

The new Mustang SVO, a high-performance model, is $15,596.

At $11,849, the Mustang LX

Total is up 23 percent from year-ago period

Sept. 1-10 sales climb to 132,333

By Jenny L. King
Staff Writer

Domestic new-car sales continued the numbers climb underway since February with a 23.19-percent increase during the Sept. 1-10 period. The total, interestingly enough, was third lowest for any period in 1983 and was one of the lesser sums reported for the historically erratic early September period.

But steady growth prevailed and the year-to-date total was 17.87 percent ahead of 1982 and surpassed Jan. 1-Sept. 10, 1981, by 16,469 units. Annualized sales based on the most recent numbers figured to 6,846,000.

For the early-September period, 132,333 new cars were delivered, up 23.19 percent from 107,423 in 1982. In '81 same period sales reached 151,281; over the years they have ranged from 78,931 (1961) to 190,493 (1955). The close of the model year and loss of a selling day due to Labor Day have traditionally kept sales repressed in early September.

General Motors was up 16.62 percent, to 76,835 from 65,883 last year. Ford Motor Co. was up 28.93 percent, to 32,865 from 25,491. Chrysler sales of 15,351 were up 19.44 percent over 12,853 the preceding year.

American Motors released a sales estimate of 4,200, up 180 percent from the year-ago estimate of 1,500. Volkswagen sales dropped 28.01 percent, to 1,221 from 1,696, while Honda again surpassed VW with its sum of 1,861 sales.

GM's share of the domestic market was 58.06 percent, down from 61.33 percent in 1982. Ford climbed to 23.84 percent from 23.73 percent. Chrysler's 11.60 percent was a move down from 11.96 percent. AMC earned 3.17 percent compared with 1.40 percent; VW had 0.92 percent compared with 1.58 percent, and Honda captured 1.41 percent with no year-ago share.

Chevrolet was the only GM make to miss year-ago sales levels. Chevrolet was down 1.24 percent while Cadillac was up 47.30 percent, Oldsmobile was up 29.88 percent, Buick was up 27.43 percent and Pontiac was up 15.44 percent.

At Ford Motor Co., Ford was up 27.51 percent, Mercury was up 29.95 percent and Lincoln was up 37.88 percent. Chrysler was up 29.72 percent, Plymouth was up 5.65 percent and Dodge was up 24.34 percent while Imperial dealers, selling out the few cars remaining in stock, sold an estimated 10 units for a 68.75-percent drop.

AMC products dropped 53.33 percent and U. S.-built Renault cars had no year-ago comparisons. VW was down 28.01 percent, and Honda is new in 1983.

With eight selling days in the period both this year and last, the daily rates were 16,542 vs. 13,428, up 23.19 percent this year.

GM seeking dismissal of X-car charges

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — General Motors has asked the federal court in Washington to dismiss all charges of safety-related brake defects in over a million 1980 and later GM X-body cars.

GM argued that NHTSA must first make a final determination of defect through its own agency procedures before it can take GM to court.

GM said the company has not decided there is a "safety-related defect" and so therefore cannot have violated the safety law by failing to report one to the government.

GM added that nothing in that law says a company must determine whether earlier recalls made (two in the case of brakes and X-body cars) have been adequate. The burden of proof, said GM, lies with the government unless the maker volunteers to recall and correct.

The GM action followed the government's move for summary judgment. The grounds for that move, however, are in a brief sealed under court order. The government took this move until some settlement is reached with GM about the stamp of confidentiality it has imposed on its subpenaed documents.

While the court knows the basis of each side's arguments—one confidential and the other under seal—the public has no way of judging at present.

NHTSA decided to short-circuit its own process in an effort to expedite the legal process and get cars with what it considers dangerous brakes off the road.

The case also involves—for the first time in the 15-year history of the agency—a government charge that GM failed to provide complete and accurate data to NHTSA in at least 18 instances. More than $4 million in fines is sought. GM denied these allegations earlier.

Local-content bill moves closer to House approval

WASHINGTON.—The UAW's local-content bill moved one step closer to House approval last week, even though the measure was reported unfavorably by a House trade subcommittee by a 10-3 margin.

The same House subcommittee also voted a unanimous thumbs up on the Senate-originated "reciprocity bill" which is considered a domestic-content-bill alternative.

That measure has strong Senate backing and relatively little House opposition. Its relatively weak provisions require the creation of trade study panels and policy programs, particularly in the service and hi-tech areas of the economy.

It also directs the President to consider the treatment of U. S. exports by foreign governments when setting U. S. trade policy.

Both bills will now be considered by the House Ways and Means Committee, where the domestic-content measure faces certain approval and the reciprocity bill is also expected to pass with some revision.

Built to heavy-truck specs

IVECO Trucks of North America, Inc., said the diesel engine and chassis of the 1984 IVECO/Magirus cabover are built to heavy-duty specifications. It has a 100,000-mile/24-month warranty.

truck industry news

'84 Magirus combines city, highway features

BLUE BELL, Pa. — IVECO Trucks of North America, Inc., has introduced the 1984 Class 7 Magirus cabover truck which it said combines the features of a highway and city truck.

The new vehicle, the 160A13-FL, will carry the IVECO nameplate as well as the firm's 100,-000-mile / 24 - month warranty, according to James R. Bostic, president, IVECO/North America.

"Although the 13FL is a medium-duty truck, its diesel engine and chassis are built to heavy-duty specifications," he said.

The 1984 model is powered by a 494-cubic-inch, water-cooled, fuel-injected six-cylinder diesel rated at 160 HP and is equipped with an air - over - hydraulic braking system.

Bostic said the vehicle has a GVW rating of 29,800 pounds, with a chassis length of 165.4 inches that will accommodate body lengths up to 20 feet. It has a five-speed transmission and a single-speed rear axle.

Standard features, which the company said increase performance and reduce maintenance, include:

Engine brake — acting on the exhaust and operated by foot to reduce brake wear, especially on downgrades.

A 52-degree tilt cab to ease maintenance.

Extra suspension — progressively acting, half elliptical leaf springs on front and rear, front shock absorbers and rear stabilizer bar.

Overhead intake for dry-type air cleaner to reduce the amount of dirt drawn into the system.

$150 million offered to enforce safety

WASHINGTON. — States could obtain up to $150 million through 1988 under a federal grant program for the enforcement of truck and bus safety. It is slated to start next month, with $18 million appropriated for fiscal 1984.

Transportation Secretary Elizabeth Dole said the program is aimed at reducing highway fatalities, injuries and property damage resulting from commercial bus and truck accidents.

Increases achieved in all 3 market segments

August sales hit four-year high

Retail sales of new trucks of all types in the U. S. in August were the highest for that month since 1979, with increases over a year ago in all three market segments.

During the month, according to preliminary manufacturer and distributor reports, franchised dealers and factory outlets retailed 252,606 vehicles, an increase of 36.7 percent over the year-ago 184,836 units. In August, 1979, the total was 290,-733.

Calendar-year sales topped the two-million mark in the last week of August, about five weeks earlier than a year ago.

Sales through August totaled 2,006,368 units, up 16.6 percent over the year-earlier 1,721,050, with higher totals this year in two of the three market segments.

For the first time this year, sales of the Japanese-built compact pickups were higher than the domestics in August, 56,052 versus 46,448.

The import total was 50.7 percent higher than the 37,197 units sold in the same month a year ago, while the domestics were up 73.6 percent from last year's 26,760 units.

Total compact-truck sales in August topped the 100,000 mark for the second time this year. Dealers sold 102,500 units, up 60.3 percent from the year-ago 63,957. In June, sales totaled 100,744 units.

• The eight-month count was 710,252 units, an increase of 42.3 percent over the year-ago 499,-158. The domestics' share was 56.4 percent on 400,509 sales, up 67.3 percent over last year's 239,396. Import sales totaled 309,743 units, 19.2 percent higher than the year-ago 259,762.

Light-truck sales through August totaled 1,885,668 vehicles, an increase of 18.6 percent over the year-earlier 1,590,286. Medium trucks were up 2.3 percent to 32,606 units, compared with 31,870 a year ago. Heavies were off 10.1 percent, from 98,-894 units in 1982 to 88,094.

In August, retail outlets sold 236,429 light trucks, an increase of 38.4 percent over the year-earlier 170,848. Mediums were up 23.1 percent to 4,751 units, compared with 3,359 in the same month a year ago.

For the first time since April, 1981, sales of heavy trucks showed a year-to-year increase in August. During the month, dealers retailed 11,426 Classes 7 and 8 trucks, a gain of 12.8 percent over last year's 10,129.

At the end of August, the number of unsold trucks in retailers' hands was down considerably from the same time in 1982. The total was 509,482 units, off 18 percent from the year-ago 621,651.

On Sept. 1, there were 474,-

SAE truck/bus parley to draw top executives

CLEVELAND. — More than 200 top executives from the truck and bus industry will explore the theme, "Commercial Vehicle Technology — Dimensions for Tomorrow," at the ninth annual SAE truck & bus meeting Nov. 7-10 at Stouffer's Inn-on-the-Square here.

The four-day program will feature keynote addresses by leading industry executives and more than 25 half-day technical sessions devoted to such topics as electronics, brakes, drivetrains, fuel economy, and bus and light-truck operation.

In addition, a truck and bus exposition will have more than 30 exhibitors on 4,500-square-feet of floor space. The latest technology for trucks and buses will be exhibited.

Donald J. Atwood, vice president, General Motors Truck & Bus Group, will speak on "Commercial Vehicle Requirements for the Future," on Monday, Nov. 7 at 9 a.m.

The annual Blue Ribbon Panel, a truck and bus meeting tradition, will feature four industry executives who will explore the future of commercial vehicle technology. Ruben F. Mettler, chairman, TRW Inc., will serve as panel moderator. He also is general chairman of the 1983 meeting.

• Panelists scheduled to appear are Donald D. Lennox, chairman, International Harvester, representing the engine industry; Charles R. Marcoux, president, Leaseway Transportation Corp., representing truck users; Gerald B. Mitchell, chairman, Dana Corp., representing a component supplier, and Jack B. Curcio, president, Mack Trucks, Inc., representing truck original-equipment manufacturers.

The panel was organized by Dean Stanley, vice president, IH Truck Engineering Group.

Lee L. Morgan, chairman, Caterpillar Tractor Co., will be the featured speaker at the annual banquet Nov. 9. Dr. Mettler will serve as toastmaster.

Technical sessions planned for the meeting include: Nov. 7 — Electronics, brake compatibility, Class 6 7 transmissions, effect of powertrain optimization on the engine and GMC Astro; Nov. 8 — Retarders, light trucks, fuel economy and coaches; Nov. 9 — Cold-weather operations, friction materials, shift controls and body design; Nov. 10 — New U. S. weight-and-length laws, seals, vehicle handling and tires.

Rockwell to open plant near Ford Louisville

TROY, Mich. — Rockwell International has announced plans to assemble and finish fiberglass reinforced plastic hood and fender assemblies for medium and heavy Ford trucks in a new facility to be opened in the Louisville area.

The plant, which is expected to start production late in 1983, will be in a building adjacent to the Ford Kentucky Truck Plant near Louisville.

George L. Levy, vice president and general manager of Rockwell's Plastic Products Business, said "the proximity of the plant to the customer will implement our plans for 'just-in-time' delivery. This will tighten our communications lines considerably, shorten transportation requirements and reduce inventories."

Just-in-time delivery of parts for final vehicle assembly is viewed by the automotive industry generally as being highly desirable in its current efforts to achieve optimum productivity in manufacturing operations.

Carl G. Roth, Ford's manager of Truck Manufacturing Operations, hailed the Rockwell move.

"We're extremely pleased to see another major supplier to Ford Motor Co. locate close to our heavy-truck operations in Louisville," he said.

"As vehicle manufacturers accelerate their programs to further reduce parts inventories, I'm sure that more and more suppliers will follow this line of action," he added.

Levy noted that Rockwell, a

General gets milestone U. S. Nissan

The first American-built Nissan pickup truck delivered in Ohio was purchased from Laughlin Motors, Canton, O., by General Tire & Rubber Co., a prime tire supplier to Nissan Motor Mfg. Co., Smyrna, Tenn. Discussing the truck's features are Marv Laughlin, left, the dealer, and John Kelley Jr., General's tire-development vice president.

Harvester offers economy version of DT-466C diesel

CHICAGO. — A new, 165-HP version of its DT-466C turbocharged, in-line, six-cylinder medium diesel engine has been announced by International Harvester's Engine Division.

George D. Aravosis, vice president-marketing, sales and product planning for International Engines, said the 165-HP DT-446C is rated for maximum fuel efficiency while retaining the premium features not found in other domestic medium diesel engines, such as induction-hardened cylinder bores, plateau-honed for superior oil control and long life.

"These engines are targeted expressly for 'fleet buyers' trucks," he said. "At 2,400 RPM, they are designed to improve fuel economy without a corresponding decrease in average speed and overall trip time for city pick up and delivery operations. They are particularly suitable for lease-truck applications."

Aravosis detailed the DT-466C design features, including replaceable valve-seat inserts and valve guides, oil-cooled pistons, and a regrindable induction-hardened crankshaft with hardened fillets and journals.

The engine's 466 cubic inch displacement (1.6 liters) has a 4.30-inch bore and a 5.35-inch

"At Joe Muers
You Just
Feel Special"

My brother Otis and I have been serving the Muer family for over 41 years and we're proud of it! We're not alone. Others can boast of over twenty and thirty years with the Muers. We're like family. We all care about each other and doing things right. We know the food at Joe Muers is only as good as we are.

So we make people feel special and they keep coming back. Kids who celebrated their birthdays at Muers are now having their business lunches. Friends of Papa Muer's kids are bringing their kids to dinner. Coming to dinner at our restaurant is a tradition for lots of Detroit families.

Joe III, Tom, Mary Ann and Joe IV are third and fourth generation Muers who feel special about that tradition. *They know there's only one sea food restaurant in Detroit that can say its family has served families for 54 years. It's Joe Muers!*

★—No Oklahoma registrations 1983 and 1982.
#—Memo units are trucks which are part of the total listed above each entry. Chevrolet memo units are vans, El Camino, LUV and S-10 compacts; Ford, vans, Bronco, Courier, Ranger and Bronco II; GMC, vans, Jimmy, Caballero and S-15 compacts; Dodge, Ram 50, Rampage, Ram Van and Rampage; Jeep, CJs, Cherokee, Wagoneer and Scrambler. Plymouth trucks are Voyager, Arrow, Trail Duster and Scamp.

—Compiled from R. L. Polk & Co. data

Increases achieved in all three market segments

August sales hit four-year high

Continued from Page 14

239 light trucks in inventory, down 17.1 percent from the year-ago 571,927. Mediums were 18.9 percent lower, from 11,462 last year to 9,301. Heavies were off 32.2 percent to 25,942 units, compared with 38,262 a year ago.

• During the month, Ford dealers retailed 75,007 vehicles, an increase of 38 percent over last year's 54,362. The eight-month total was up 18.7 percent to 631,211 units, compared with 532,021 in 1982.

Chevrolet said its dealers sold 72,748 trucks in August, a gain of 33.9 percent over the year-earlier 54,346. Through August, the total was 624,568, up 13.6 percent from last year's 549,995 units.

From a percentage standpoint, GMC's August sales increased more than any other Big Three truck manufacturer.

Dealers retailed 21,257 units, up 51.9 percent from last year's 13,998. The January-August count was 176,729, a gain of 11.1 percent over the year-ago 159,054.

Chrysler dealers retailed 19,058 units during the month, an increase of 3.3 percent over last year's 18,454. Through August, the total was up 4.6 percent to 178,604 vehicles, compared with 170,822 a year ago.

August sales of Jeep four-wheel-drive vehicles totaled 4,800 units, an increase of 9.9 percent over the year-earlier 4,368. The January-August count was 11.6 percent higher, 46,984 versus 42,109.

• Retail sales of Volkswagen front-drive compact pickups were off 61 percent in August, from 905 last year to 353. The eight-month total was 3,986 units, a decline of 55 percent from the year-earlier 8,841.

All five U. S. distributors of Japanese-built compact pickups reported sizable gains for August and the first eight months.

Toyota dealers retailed a record 26,161 vehicles during the month, an increase of 50.4 percent over last year's 17,399 units. Through August, the total was up 27 percent to 119,221 units, compared with 93,902 in the like period a year ago.

During the month, Nissan dealers sold 14,977 pickups, up 84.3 percent over the year-earlier 8,125 units. The January-August count was 49.4 percent higher than last year, 91,835 versus 61,484.

August sales of Mazda compacts totaled 7,088 units, an increase of 56.4 percent over last year's 4,532. The eight-month count soared to 47,024 units, a gain of 75.2 percent over the 26,842 retailed in the same period in 1982.

Isuzu dealers sold a record 2,367 vehicles during the month, 86.2 percent higher than the year-ago 1,271. Through August, the total was 15,508, up 34.2 percent from last year's 11,556 units.

During the month, Mitsubishi dealers retailed 767 pickups, bringing the eight-month total to 5,416 units.

40 rollbacks of odometers bring suspended sentence

CHICOPEE, Mass.—A Massachusetts Superior Court judge has given a Chicopee used-car dealer a suspended prison sentence after the dealer pleaded guilty to charges of turning back the odometers on some 40 vehicles.

Assistant State Attorney General Raymond Lamb disclosed that Norman LaCasse, 34, pleaded guilty to 11 counts of larceny of more than $100 in connection with a scheme involving sale of cars with altered odometers at a dealer auction in the Boston suburb of Concord.

Judge Sandra L. Hamlin sentenced LaCasse to three to five years in state prison, suspended the sentence and placed LaCasse on probation for three years. The state attorney's general's office had recommended a 30-day sentence.

Still pending is a separate civil action in Hampden County Superior Court, brought by the state attorney general's office against LaCasse, owner of Hank's Auto Service, Inc., and Norm's Auto Service, Inc., both in this city.

Being sought is restitution for customers who may have purchased cars with altered odometers from LaCasse.

The civil action asks that LaCasse be ordered to adhere to a Massachusetts state law mandating vehicles to be kept on a lot for at least four days before being sold.

New post for Harris

DETROIT.—Emmit W. Harris Jr., has been appointed manager of the General Motors Acceptance Corp. branch in Richardson, Tex. He formerly was manager of the Houston/South branch.

U.S. inventory is 55 days, spotty

Continued from Page 1

August 1, unchanged from a month earlier, despite some 8,000 Encores in the inventory which had not yet gone on sale.

VWoA was the only corporate maker to reduce its supply during August and had a 55-day supply of Rabbits Sept. 1, down from 67 days a month earlier.

By size class, the Sept. 1 domestic inventory was divided this way: Subcompact, 17.15 percent; compact, 22.35 percent; intermediate, 40.13 percent; standard, 9.68 percent, and luxury, 10.69 percent.

A month earlier, the domestic inventory was divided as follows: Subcompact, 14.91 percent; compact, 22.33 percent; intermediate, 38.97 percent; standard, 15.91 percent, and luxury, 7.88 percent.

Sept. 1 days-supply figures by size class were:

Subcompact — Alliance, 45½; Horizon, 50; Turismo, 50; Rabbit, 55; EXP, 55½, Omni, 57; Charger, 58; Chevette, 70; Pontiac 1000, 72; Lynx, 77, and LN7, 117.

Compact — Skyhawk, 38; Cavalier, 44; Dodge 400, 44; 2000 Sunbird, 45; Reliant, 46½; Tempo, 48; Topaz, 52; LeBaron, 55; Camaro, 57; Firenza, 62; Aries, 66; Firebird, 67; Eagle, 83; Mustang, 85; Cimarron, 86, and Capri, 130.

Intermediate — Malibu, 28½; Cutlass Supreme, 46; Celebrity, 49; Ciera, 52½; Century, 53; Omega, 57; Regal, 61; Cougar XR7, 61; Monte Carlo, 61½; Grand Prix, 62; Skylark, 64; Bonneville, 67; Mirada, 70; LTD, 74; New Yorker E, 74; Marquis, 75; Chrysler E Class, 78½; Thunderbird, 80; Dodge 600, 99; Citation, 109; Pontiac 6000, 120½, and Phoenix, 126.

Standard — Olds 88, 27; Cordoba, 37; LeSabre, 39; Gran Fury, 39; Crown Victoria, 41; Grand Marquis, 41½; Diplomat, 45; Chevrolet, 52, and Parisienne, 71.

Luxury — Corvette, 23; Cadillac, 34½; Fifth Avenue, 35; Olds 98, 38; Imperial, 42; Eldorado, 54; Mark VI, 54; Seville, 58; Electra, 65; Lincoln, 68; Riviera, 72, and Toronado, 72.

On the import side, Japanese nameplates were in 22-day supply, which meant there were virtually none to be had. That compared with 23 days a month earlier.

Japanese nameplates and their days-supply figures were: Toyota, 15; Nissan, 18; Honda, 29; Mazda, 29; Subaru, 33; Isuzu, 46, and Mitsubishi, 60. In addition, Chrysler Corp. had a 54½-day supply of Mitsubishi-built Colts, Sapporos, Challengers, Conquests and Vistas.

West German nameplates were in 36-day supply. German marques and their Sept. 1 days-supply figures were: Porsche, 13; Audi, 25; Mercedes, 26; Volkswagen, 40, and BMW, 57.

Other import nameplates and their Sept. 1 days-supply figures included: Saab, 16; Jaguar, 18; Volvo, 22; Peugeot, 28; Alfa Romeo, 94, and Renault, 108.

Imported pickup trucks and their Sept. 1 days-supply figures were: Toyota, 16½; Mazda, 23; Nissan, 35; Isuzu, 70; Chrysler Corp./Mitsubishi, 72, and Mitsubishi, 105.

At least, not while Reagan is in office

Air bag requirement called unlikely

Continued from Page 3

meant needless deaths and injuries.

Responding to Danforth's criticism of the "ornamental" bumper, Steed noted that the government, like the Center for Auto Safety and others, is filing briefs on the effects of the Supreme Court air-bag decision on the bumper case. Meanwhile, said Steed, NHTSA is spending $1 million on a full-scale evaluation of the standard.

• But, Steed added, NHTSA would object to the "rigidity" of setting a bumper standard in the Danforth bill even if the agency agreed with the speed because such a legislated speed would "severely curtail the agency's ability to adjust the standard to meet the best current data and could stifle innovation in the automobile industry."

Steed also opposed the Danforth bill's section on side impact protection. She explained NHTSA is in the middle of a series of 30 side impact tests and NHTSA expects preliminary results by next March. A new standard must await the conclusion of research and that could not be before the time set in the Danforth bill.

(Steed did not mention that cooperative work NHTSA initiated with the auto makers has been suspended awaiting the outcome of a suit which says the studies are illegal. That suit was filed by Joan Claybrook, former NHTSA chief and now head of Public Citizen, a consumer activist group.)

Steed also reported that NHTSA plans a "major push" on truck crashworthiness but also noted that Congress had reduced its funds by 75 percent for fiscal 1983 and will stay at that level for fiscal 1984.

NHTSA is also considering improvements in steering wheel design and the strength of cab structure and therefore supports that section of the Danforth omnibus bill.

NHTSA is opposing the bill's requirement for '85 models to use the Securiflex windshields made by St.-Gobain Vitrage, a French company, because NHTSA is considering a rule that will allow a variety of materials as a bond to the inside of the windshield.

Steed also testified that while NHTSA continues its high-speed crash testing, there is still "widespread concern" about the repeatability of the test data and NHTSA has called for a public meeting in October. NHTSA will make a report to Congress next January.

Steed said NHTSA is drafting a booklet to be called AUTO-WISE, that will not give ratings but will have lots of safety data; it will also be updatable by supplements

Steed concluded by saying that although NHTSA has submitted a final rule on high-mounted stoplights for Office of Management and Budget clearance, NHTSA cannot support the bill's effective date of '85 models.

Bob Kelly, senior vice president of the Insurance Institute for Highway Safety (IIHS), said that delay of passive restraints means deaths and suggested NHTSA and the Department of Transportation (DOT), move the reconsideration as quickly as possible. IIHS endorses the timetable suggested by State Farm, one of the successful litigants in the passive-restraint case.

State Farm, in a letter to Transportation Secretary Elizabeth H. Dole, suggested concluding rulemaking by Dec. 15, 1983. This envisages a 15-day comment period and a 15-day reply comment period after the start of rulemaking on or before Oct. 15.

If DOT has all comments and replies in hand by Nov. 15, then 30 days can elapse before a final decision by Dec. 15. Taking prompt action would put the auto industry on immediate notice that it should start planning passive restraints for the following model year.

As for General Motors' arguments for further study of costs and benefits, State Farm said this could mean years of delay.

Claybrook wholeheartedly supported the Danforth bill and agreed that the Administration was determined to kill the passive-restraint rule.

Somewhat different testimony in favor of mandatory air bags was heard last week from James P. Corcoran, New York superintendent of insurance, speaking on behalf of the National Assn. of Insurance Commissioners. Corcoran said that a majority of insurers has already filed with the New York State Insurance Department for premium discounts of up to 30 percent on both no-fault and medical payment insurance for cars with passive restraints.

Corcoran plans to recommend that the National Assn. of Insurance Commissioners adopt model legislation to require all auto insurers to provide appropriate premium discounts for no-fault, medical payment and bodily injury liability coverages on insured vehicles with passive restraints.

The National Assn. of Independent Insurers — which testified in favor of the Danforth bill — endorsed Corcoran's recommendation.

New labor pact OK'd by workers at Chrysler

DETROIT. — The new 25-month contract between the UAW and Chrysler Corp. has been approved by a 7 to 3 margin by the UAW members.

Of the 32,263 workers voting, 22,427 voted yes and 9,836 voted no. There are about 56,000 Chrysler workers.

The new contract, negotiated earlier this month, gives U. S. Chrysler workers a $1 an hour cost-of-living increase retroactive to Aug. 15, 1983, and an additional $1.42 an hour increase during the agreement.

Those raises will give the Chrysler workers current parity with their counterparts at General Motors and Ford. They were lagging behind by about $2 an hour. That would have increased to $2.42 next June when COLA payments, deferred at the Big Two under their current contracts, are restored.

The contract will cost Chrysler about $1 billion. It expires Oct. 15, 1985.

Chrysler workers agreed to more than $1 billion in concessions when the company faced bankruptcy.

GM chairman sees 13.5 million sales for 1984

Continued from Page 1

million cars and 2.9 million trucks are expected to be sold, representing a 15 percent climb over 1982.

Smith made it clear that he feels the potential exists to top his current outlook.

"Sales could easly surpass this ('84) total," he said. "When you look at the strong financial position of consumers and the great need to replace many of the aging vehicles on the roads, it's clear we could exceed our 13.5-million forecast."

Hedging his bet, however, the GM chairman noted there's also some potential for slipping below his estimate. "The principle risks here rest with the financial markets and with concerns over the federal deficit," he said.

Smith supported his upbeat forecast, however, by saying the Gross National Product should continue to rise at a 3 to 4 percent rate through 1984.

"Strong gains in industrial production and employment show the economy is still expanding rapidly," he said. "And extremely low inventory levels indicate we should have further gains in both output and employment."

He noted that GM already has recalled some 65,000 laid-off workers during 1983.

Taking a longer-range view, Smith predicted that "sometime in the mid-'90s" North American new car and truck sales will reach the 20-million mark for the first time, and worldwide car and truck sales will reach 60 million.

By contrast, the best year of record to date is 1978 when free-world car and truck sales totaled more than 38 million units.

Porsche moves to take over U.S. distribution

Continued from Page 1

inal Porsche-Audi agreement is considered a success, there is no doubt the relationship between Porsche and the parent VW group has changed since the Wolfsburg company stopped buying most of its R & D from Porsche.

"It needs a delicate touch when two manufacturers are sitting on top of one another," said former Porsche sales director Lars Roger Schmidt.

Schmidt, a long-term Porsche man who quit unexpectedly in April of this year, is expected to be replaced by the end of this year.

Meanwhile, the center of attention of the Porsche stand at the Frankfurt Auto Show was a new four-wheel-drive 400-HP model based on the 911 and carrying the name Group B.

But far from simply being an homologation special — 200 must be built in a year to qualify for acceptance in a certain auto racing category — the sleek, curvy Group B will form the basis for a street-legal car for the U. S.

Helmutt Bott, director of Porsche R&D, suggested that it could be a replacement for the 930 Turbo.

Rejecting doubts that getting the car through America's complex exhaust, safety and bumper standards will prove difficult, Bott quipped, "We like a challenge."

He added that the program will take "at least three years."

Total is highest since late June

Auto production jumps to 150,427

By Mary Beth Mayer
Staff Writer

Last week saw the highest domestic auto production in 12 weeks.

The makers scheduled 150,427 units last week — the highest total since 152,810 cars were completed the week ending June 25.

The total was 28.61 percent over 116,970 units built during the prior four-day week, and 48.05 percent above 101,611 units finished in the year-ago period.

So far this year, there have been 4,600,747 cars assembled, up 23.52 percent from 3,724,820 units assembled in the same period last year.

Breakdown for the week by companies was: General Motors, 55.87 percent; Ford Motor Co., 25.08 percent; Chrysler Corp., 13.76 percent; American Motors, 3.00 percent; Volkswagen of America, 1.56 percent, and Honda, 0.73 percent.

Honda's production was low last week due to model changeover.

Two GM plants — Norwood and Van Nuys — were down last week, because of a shortage of automatic transmissions for Camaros and Firebirds.

GM had its Detroit, Flint and Lansing plants working Saturday (Sept. 17).

Three Chrysler plants logged daily overtime last week. Belvidere and Newark worked two daily 9-hour shifts and Jefferson worked two daily 8½-hour shifts.

Four Ford facilities worked daily and Saturday overtime last week. Working extra hours were: Kansas City, Loraine, St. Louis and Wayne. Ford's Chicago point also logged extra daily hours.

Ford's Atlanta point added production of '84 LTD and Mercury Marquis models to its T underbird output last week. The facility will drop Thunderbird production from 50 per hour to 31 and will build 19 LTD and Marquis models combined per hour.

This week, Ford slated overtime at five factories. Chicago, Kansas City, Lorain, St. Louis and Wayne will work daily overtime and Lorain, St. Louis and Wayne will also work Saturday (Sept. 24).

Demoted exec who sued is fired by Ford directors

DETROIT. — Thomas Feaheny, the Ford Motor Co. executive who filed a $330 million lawsuit against Henry Ford II, Ford Motor Chairman Philip Caldwell and other Ford executives, was fired Sept. 8 by the company's board of directors.

Feaheny had been suspended, with pay, from his post as vice president of vehicle research since he filed the lawsuit July 26 in Wayne County Circuit Court here.

In his lawsuit, Feaheny said Ford executives conspired to sabotage his career and leave him "twisting in the wind," according to Feaheny's attorney, James F. Schouman.

Trial has been set for January, 1984, though Schouman said a judge will rule Sept. 30 on a motion by the defendants to dismiss Feaheny's suit.

Feaheny said Ford executives started to conspire against him after he testified as a witness for Ford Motor Co. during the 1980 trial in Winamac, Ind. Feaheny was vice president of car engineering at the time and testifed the Pinto was a safe car. Ford Motor was acquitted of criminal charges in the death of the Pinto's passengers.

Along with Ford and Caldwell, Feaheny's suit also named Harold A. Poling, executive vice president for North American Automotive Operations; Harold C. MacDonald, a retired vice president; John McDougall, a retired vice president; Louis R. Ross, executive vice president for technical staffs, and Peter J. Sherry, vice president for personnel and organization.

Feaheny said he was the only Ford officer not granted stock options in 1980 through 1982, that his salary of $165,000 per year had been frozen since 1979 and that he was being denied other perks.

A Ford Motor spokesman said: "We regard it as an internal matter and we don't want to discuss the details."

Clark signs for GM lines

HOLTON, Kans. — Homer L. Clark has signed a franchise for Clark Chevrolet - Oldsmobile-Pontiac-Buick, Inc., here.

Truck production of 55,819 is best in 4 years

Domestic truck makers targeted last week's output at 55,819—the most trucks produced in one week since 58,483 were completed in the week ending July 14, 1979.

Last week's total was up 28.79 percent over 43,342 trucks finished during the prior holiday-shortened week and 33.15 percent over the 41,304 built in the year-ago week.

Year-to-date, there have been 1,602,060 trucks assembled, up 11.45 percent from last year's 1,437,480.

Nine factories worked extra hours last week, to boost output to the four-year high.

Ford Motor Co. had six facilities on overtime. Kansas City, Lorain, Louisville, Norfolk, Michigan and Twin Cities worked extra daily hours and Lorain and Louisville were also up Saturday (Sept. 17).

General Motors' Janesville and Pontiac No. 5 plants posted Saturday overtime last week, and Chrysler Corp.'s Warren truck point worked daily overtime.

This week, Ford plans overtime at four facilities. Louisville, Norfolk, Michigan and Twin Cities will work daily overtime, and Louisville will also operate Saturday (Sept. 24).

Ford plant down; Canadian output 14,262 for week

As Ford Motor Co.'s St. Thomas facility went down last week to begin four weeks of tooling changes, the Canadian auto makers scheduled 14,262 units, down from 14,443 units assembled in the previous holiday-shortened week.

Last week's total was down 1.26 percent from the week before, but was 17.95 percent over the 12,092 cars built in the year-ago week.

So far this year, 678,268 units have been assembled, up 6.97 percent from 634,103 completed in the year-ago period.

Canadian truck manufacturers estimated last week's output at 12,480, up 23.15 percent from 10,134 built in the four-day week before and 55.23 percent over 8,040 finished in the year-ago week.

Year-to-date, the makers have completed 367,363 trucks, down slightly from 369,671 finished in the year-ago period.

Ford's St. Thomas car point will be closed until Oct. 10 as it retools to add production of full-size cars to the Escort/Lynx subcompact cars already built there.

Chrysler Corp.'s Windsor car facility is retooling for the T-115 van/wagon, which it will begin to produce in early October.

International Harvester's Chatham plant was down last week.

Bill would put tough restrictions on major Japanese import lines

By Helen Kahn
Washington Bureau Chief

WASHINGTON.—A draft bill to restrict Japanese imports very severely—except for small manufacturers and for domestic companies bringing in their captive imports—is being circulated among the domestic auto companies and the UAW.

Written as an emergency and temporary measure by Michigan Rep. John Dingell, it would consider suggestions, then be polished and introduced as the quota bill promised when mention was first made of the possibility the Japanese might not accept a fourth year of "voluntary" restraints on auto exports to the U. S.

The Dingell draft gives authority to the Secretary of Commerce (thus keeping jurisdiction within the House Energy and Commerce Committee, which Dingell chairs) to keep tabs on production and sales so that a 15-percent share can be figured for importers bringing in more than 100,000 units (vehicles weighing up to 10,000 pounds) in the second model year preceding the publication.

If, for example, such a bill were in effect now, the only import companies affected would be Japanese: Nissan, Honda, Mazda, Subaru, and Toyota, based on 1982 sales. Fifteen percent of the 1982 total U. S. sales of 5,461,074 would be 819,161. This is, of course, far below the 1.68 million allowed for Japanese imports under the "voluntary" agreement.

Certainly it would be far below what General Motors might want since it desires to bring in 100,000 cars from Suzuki and 200,000 from Isuzu. Although these "captives" would be exempt from the proposal as drafted by Dingell, there is also language exempting captives only if consistent with the purposes of the bill.

• The "emergency" bill—drafted to avoid violating treaties on the General Agreement on Tariffs and Trade—is also tempo-

Committee wants them as options by 1986

Air bags gain in Senate

WASHINGTON. — A voice vote of the Senate Commerce Committee indicates that the group wants air bags offered as an option on auto makers' most popular models, beginning in 1986.

Several budget waivers may be needed before this bill, which involves air bags, bumpers, side-impact protection, heavy - truck safety, drunk-driving and crash-worthiness rating, comes to the Senate floor.

The fate of the measure, sponsored chiefly by Senator John C. Danforth, Missouri Republican, and, as amended, by Senator Wendell Ford, Kentucky Democrat, is indeed cloudy. It had the strong support of Committee Chairman Bob Packwood, Oregon Republican.

There is so far no companion House bill in sight and there is not likely to be time this session or even in the short election-year session next year to see thorough treatment. Moreover, the bill—if it survives so long—is likely to be vetoed by President Reagan.

Yet the bill's continued life even this far is startling in light of the Republican - controlled Senate and the deregulatory fever of the last two years in Washington.

• At least, it must be viewed as sending a signal to NHTSA as it starts reconsideration of the passive - restraint standard Oct. 15. Above all, it shows impatience with the two-year tenure of former Administrator Raymond A. Peck.

The Danforth bill would have required air bags in all cars made on or after Sept. 1, 1985, and the Transportation Secretary would have had to disseminate information about this safety device.

Danforth would not allow the standard to be met by passive belts which he described as "cumbersome" and as inviting rejection and disconnection compared with the air bag's "unobtrusiveness."

Senator Ford, in his substitute, suggested an amendment that would require a large auto company to offer as an option air bags on "at least" its best-selling model at a "reasonable price" and to advertise availability for '86 models.

The makers affected are those which manufacture a "combined total of more than 1.2 million passenger cars in the U. S. and any foreign nation and which sell a total of more than 200,000 passenger cars in the U. S." This means General Motors, Ford Motor Co., Nissan, Toyota and Volkswagen of America.

It is possible that by 1986 models, Honda, Chrysler Corp. and Renault would also be covered, especially if the Alliance and Encore continue their excellent sales record.

• The last time a similar amendment was proposed (by Virginia Senator John Warner in 1979), it specified passive restraints, not air bags. VWoA was also covered by that definition, but felt the burden to be less since it had then—and still has—a passive belt already offered as an option on Rabbits.

Another possible compromise —also not acceptable to Danforth—was to include Honda and Chrysler and require driver-only air bags by '86 models and then two years later require full front seat air bag protection.

Danforth indicated he might accept full front seat protection but only by including Chrysler and Honda. Senator Ford balked and insisted on his original idea —full front seat air bag protection for one line of car for '86 models but excluding Chrysler and Honda and Danforth was voted down.

Later, in talking to reporters, Danforth admitted he was "disappointed" in "half a loaf or less" on the air-bag provision.

• Senator Ford started to propose amendments and then decided to offer them when the Danforth bill comes to the floor.

GM's C-cars to roll Dec. 1

By Marjorie Sorge

DETROIT. — General Motors will begin building its new front-wheel-drive C-cars at the Orion Township (Mich.) and Wentzville (Mo.) assembly plants on Dec. 1, according to F. James McDonald, GM president.

Those cars could go on sale by March, depending on how the startup goes, he said.

Orion will build the Oldsmobile 98 and the Cadillac DeVille, while Wentzville will produce the Olds 98 and the Buick Electra.

Each plant will build 75 cars an hour. However, the effective speed will be 67.8 because GM will use mass relief for the two daily 23-minute breaks, shutting down the line.

The startup of the C-bodies has been delayed twice to fine-tune and double-check the drivetrain and other components. It has been reported there were problems with the

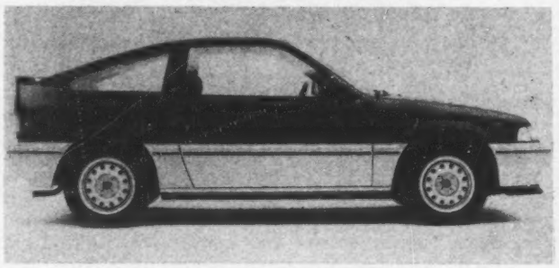
New Civics for '84



The mileage champ—Civic CRX

Tops in city mileage on the 1984 EPA list is the Honda Civic CRX, which at 51 MPG has the highest mileage ever for a gasoline engine. The CRX with its 1.3-liter engine is rated at 67 MPG highway. A 1.5-liter engine is also available. Story on Page 3.

Honda's innovative Civic Wagon

One of the biggest surprises and a big crowd-puller at the recent Frankfurt Auto Show was this Civic Wagon (called the Shuttle at the show), which joins Honda's U. S. offerings for '84. The Wagon has reclining seats front and rear and folding rear seats for flexibility in carrying passengers or cargo.

The Civic S Hatchback

This sporty Civic S Hatchback features special suspension, Michelin steel-belted radial tires and five-speed transmission as standard. Split rear seats adjust forward and back, also recline or fold up.

breaking news

Chevy's Suzuki is named Sprint

DETROIT.—Chevrolet will call its Suzuki-built minicar the Sprint when it bows next year as a 1985 model. The Sprint rides on an 88-inch wheelbase and will have a curb weight under 1,500 pounds. It is powered by a 1-liter, three-cylinder engine, expected to yield highway fuel economy figures near 70 MPG. Price is expected to be under $5,000.

Buick to offer sporty luxury cars

FLINT.—Buick will offer sporty T-type versions of its new front-wheel-drive C-body full-size cars, the Electra and

GM-Toyota and UAW reach accord

Laid-off workers get first shot at Fremont

By Marjorie Sorge
and Helen Kahn

UAW-represented workers laid off from the General Motors Fremont (Calif.) plant will have first crack at the 2,500 hourly jobs available if the plant reopens under the GM-Toyota joint venture, according to company and union officials.

A letter of intent signed between the UAW and the joint venture last week also recognizes the UAW as the bargaining agent at the plant.

The joint venture, a 12-year agreement to build small cars at the now-idle Fremont plant, is still subject to the approval of the FTC. If approved, the two companies would begin building the new front-wheel-drive small cars during 1985.

Both UAW President Owen Bieber and W. J. Usery Jr., advisor to management on the labor relations involved in the venture, said the agreement was not made to spur action from the FTC. Bieber said he believes the commission will approve the venture.

According to Bieber, a majority of the workers hired at the new joint venture facility will be former GM-Fremont workers. Under labor law, the UAW could not be recognized immediately as the bargaining agent for the new company unless a majority of workers hired are UAW members.

There are about 4,200 former Fremont workers presumed available for the 2,500 jobs, according to GM. When the facility closed last year, about 5,200 were laid off. About 1,000 of those workers have been absorbed in GM plants at Wentzville, Mo.; Oklahoma City, and Leeds, Mo. Fremont has been closed since March, 1982.

According to the UAW, workers from those facilities could apply for the Fremont jobs since they are still considered part of that plant's workforce. However, a UAW spokesman said, the union does not expect many to make those applications.

Under the letter of intent, former Fremont workers are eligible for any job at the joint-venture plant if they have the qualifications. According to a UAW spokesman, the union expects the former workforce to fill 90 to 95 percent of the available 2,500 hourly jobs.

Usery said the new company will consider seniority and experience in hiring but will not abide by the rules of a defunct UAW unit.

The charter of UAW Local 1364, which had represented Fremont, was revoked in July because it was representing a defunct plant.

The letter also provides for an interim agreement until a formal contract is negotiated. Bargaining is scheduled to begin in April, 1985, concluding by June, 1985.

Wages at the new plant will be comparable to those in the rest of the industry. GM assemblers currently make $11.85 an hour, plus benefits.

Soviet methane car returned in protest

VICTORIA, B. C. — British Columbia Sciences Minister Pat McGeer has returned a Russian-made Lada car to protest the shooting down by the Soviets of a South Korean airliner carrying 269 passengers.

McGeer was given the car by the manufacturer. It was a special car designed to run on methane gas.

GM-Toyota venture called free enterprise

WASHINGTON. — The proposed GM-Toyota joint venture represents free enterprise — not monopoly, according to the Heritage Foundation's Asian Studies Center.

As viewed by the conservative think tank, the proposed 12-year alliance between the giant auto makers would allow U. S. companies a chance to learn management techniques, could pave the way for increased cooperation between the U. S. and Japan and would help keep auto jobs in the U. S.

The FTC Bureau of International Competition is currently considering whether such a joint venture will lessen or tend to lessen competition and thus breach the antitrust laws. Part of the consideration turns on definition of market: Is it national, international, across all types of models, or limited to cars of a certain size?

The commissioners are not expected to consider the bureau's recommendations until October. This will be after the departure of Commissioner David Clanton, a Republican who was once an aide to Michigan Republican Senator Bob Griffin.

Last week, President Reagan, as expected, sent to the Senate his FTC nominee—Terry Calvani, a Vanderbilt University law professor who is reportedly a conservative Republican. Insiders indicate there is no reason to believe that Calvani will be more or less sympathetic to the GM-Toyota arrangement than Clanton would have been.

• Meanwhile, Ford Motor Co. and Chrysler Corp. are vigorously opposing the GM-Toyota alliance.

Methanol-powered Fords for California

A fleet of methanol-powered vehicles was presented by Ford Motor Co. President Donald E. Petersen, right, to California Gov. George Deukmejian. The 506-car fleet of 1983 Ford Escorts will be operated statewide by 15 city and county governments, six state agencies and two private companies.

Including fuel-champ Civic CRX

New Honda models bow in October

By Matt DeLorenzo
Los Angeles Reporter

LAS VEGAS. — Honda has introduced its new Civic line, including the two-seat CRX coupe, which recently took the EPA's top fuel economy rating.

The new Hondas are expected to go on sale in early October.

Base price for the CRX is $6,149 when equipped with a 1.3-liter, 12-valve, four-cylinder engine. That engine enabled the car to get a 51 MPG city and 67 MPG highway rating from the EPA. When equipped with a larger 1.5-liter engine, the CRX costs $6,599. The CRX features plastic front fenders and nose.

The standard Civic series has also been overhauled with styling incorporating what the company terms "the long-roof concept."

These vehicles will be available in three-door hatchback, four-door wagon and four-door sedan models. Base price for the standard Civic begins at $5,249 and goes to $6,299 for DLX models, $6,849 for the Civic S, $6,999 for the wagon and $7,099 for the sedan.

Wheelbases vary by model, with the CRX having the shortest at 86.6 inches and an overall length of 144.6 inches.

Civic hatchback models ride on a 93.7-inch wheelbase, while sedan and wagon models share a 96.5-inch wheelbase. The previous model had a 91.3-inch wheelbase.

• The CRX uses fenders made of plastic blends, including what is called Honda polymer-alloy, a variation of polypropylene developed by Honda. The CRX is available in only three colors, white, red or blue over silver.

Pictures on Page One.

A number of features incorporated in the home market models, such as fuel injection, a sunroof and pop-up ventilation scoop will not be offered on U. S. versions.

The Civic models in general offer independent front suspension with torsion-bar struts and trailing links with a beam-type axle in the rear. Steering is rack-and-pinion and the brakes are ventilated disks in front and drums in the rear.

Four- and five-speed manual gearboxes along with a three-speed automatic unit are available on Civic. The 1.3-liter engine develops 60 horsepower at 5,500 RPM and 73 pounds/feet of torque at 3,500 RPM. The larger engine develops 76 HP at 6,000 RPM and 83.9 pounds/feet of torque at 3,500 RPM.

According to Tom Elliott, vice president-national sales operations manager for American Honda, the company expects to sell 40,000 to 45,000 CRX coupes in 1984, or about 25 to 30 percent of total Civic sales. Thirty-five percent of the 140,000 to 150,000 Civics to be sold will be hatchbacks. Elliott sees two-thirds of the models being equipped with the larger 1.5-liter powerplant.

With the addition of CRX as Honda's fuel economy leader, the Civic 1300 FE has been dropped for '84. The new model also means Honda will not be bringing in the City minicar in the near future, according to Elliott.

Honda estimates it will sell 480,000 cars during the '84 model year, including U. S.-built Accords.

A cool Chevette

A great attraction at the Lujack Schierbrock (Chevrolet) Summer Melt Down Sale in Davenport, Ia., was this Chevrolet Chevette sculpted out of ice. Visitors to the dealership registered their guesses on how long it would take the ice Chevette to melt in the 96-degree heat.

Bricklin import firm drops its ad agency

MONTVALE, N. J. — International Automobile Importers, Inc. (IAI), dropped its advertising agency last week and brought all advertising efforts inside the corporation.

The decision to stop using Berenter, Greenhouse & Elgort, a New York agency, for the estimated $7 million to $10 million account was made because there wasn't "a need for a full service agency," according to John Slaven, senior vice president for marketing.

Slaven also confirmed that IAI, Malcolm Bricklin's company which imports Pininfarina and Bertone cars, will be dropping model designations as a running change in production.

The two cars will be known as the Pininfarina and the Bertone, and not Spider and X1/9.

The move is designed to promote the names of the two manufacturers rather than models since there is only one model from each manufacturer.

Both cars received the names under the old Fiat organization and were used initially by IAI.

As for advertising coming from IAI, Slaven said work was being done but he could not project when advertising would appear.

He added that the decision to drop the ad agency "was not a matter of dissatisfaction with the agency" and IAI is not looking for another agency.

Berenter, Greenhouse & Elgort was appointed in early May and Slaven said the impact of the agency on IAI was "minimal."

Ford offering 3 new models, HO V-8 for '84

Ford's light-truck lineup for the 1984 model year features a new heavy-duty Ranger chassis/cab, an F-Series SuperCab pickup, a modified 5.8-liter, four-barrel, high-output V-8 and the Eddie Bauer Bronco II.

The Ranger chassis/cab, powered by a 2.8-liter V-6 gasoline engine, is designed primarily for commercial users and has a 2,200-pound payload option.

The F-250 heavy-duty, 4x4 styleside SuperCab has an 8,600-pound GVW rating and 3,870-pound payload and provides 37.4 cubic inches of cargo space behind the front seat.

Standard powertrain in the SuperCab is a 5.8-liter, two-barrel V-8 with a four-speed manual transmission. Also available in the SuperCab, as well as other conventional pickups with GVWs of 8,500 pounds or more, are a 7.5-liter V-8 and 6.9-liter, in-line six diesel.

The 5.8-liter, high-output V-8 is a modified version of Ford's 5.8-liter Windsor V-8 and will be available after Nov. 1. It is rated at 210 HP and 304 foot pounds of torque at 2,800 RPM.

• Power-boosting modifications, in addition to the four-barrel carburetor, include a new camshaft, larger air cleaner and lower-back-pressure exhaust system with a heat-crossover valve. It comes with a 63-amp battery and stainless-steel exhaust pipes.

Standard transmission with the HO V-8 is Ford's three-speed SelectShift automatic. Also available on 1984 conventional light trucks and sports/utility vehicles is an improved manual four-speed overdrive transmission teamed with the 2.8-liter V-6 and 5-liter, two-barrel V-8.

The Eddie Bauer Bronco II is Ford's first application of the "designer vehicle" concept to its compact-truck line. It was developed in conjunction with Eddie Bauer, Inc., manufacturer of outdoor equipment and clothing.

"This vehicle is designed with outdoor enthusiasts in mind, but should appeal to anyone who wants an eye-catching, compact utility vehicle," said Edsel B.

Continued on Page 16, Col. 3

Signature tells the story

Edsel B. Ford II, Ford Division marketing product plans manager, points to the Eddie Bauer signature next to the Bronco II nameplate, marking the first time Ford has introduced a "designer" truck.

Winnebago founder joins Hall of Fame

John K. Hanson, right, founder and chairman of Winnebago Industries, Inc., was inducted recently into the Recreational Vehicle/Mobile Home Hall of Fame. Presenting the plaque to Hanson is Paul Stiner, director of the Hall of Fame Foundation.

July registrations rise 32 pct. to 258,967 units

July registrations of new trucks of all types in the U.S. were dramatically higher than the same month a year ago, with big increases in two of the three market segments and a strong recovery in the third.

During the month, according to R. L. Polk & Co. statistics, there were 258,967 new-truck registrations, an increase of 31.8 percent over last year's 196,531 and the second-highest monthly total in 1983. The June count was 274,989.

The seven-month total was up 15.9 percent to 1,624,008 units, compared with 1,401,069 in the like period a year ago. Again, registrations were up in two of the three market segments.

Light-truck tallies in July totaled 243,983 units, an increase of 33.8 percent over the year-earlier 182,326. There were gains in all three weight groups in this market segment.

The medium-truck count during the month was 26.3 percent higher than a year ago, 4,468 versus 3,537, and again, the total was up over 1983 in all three weight classifications.

Heavies were off 1.4 percent in July, 10,516 tallies versus 10,688, but the Group 8 count was higher than a year ago. The total of 6,275 units was up 2.3 percent from last year's 6,133.

For the month, Group 7 registrations were off 6.5 percent, from 4,535 in 1982 to 4,241. The only other weight class to lose ground in July was Group 5, where the count dropped from 178 units a year ago to 43.

Light-truck registrations

July registrations of heavy trucks second-best of '83

July registrations of new heavy trucks in the U.S. were down only slightly from a year ago, and were the highest since April, the top month for Groups 7 and 8 tallies this year.

During the month, according to R. L. Polk & Co. statistics, there were 10,516 registrations, a decline of 1.4 percent from last year's 10,668 units. In April, there were 10,816 Groups 7 and 8 tallies.

The seven-month total was down 12 percent to 68,615 tallies, compared with 77,982 units at the same time a year ago.

Through July, Group 8 registrations totaled 41,225, a decline of 4.7 percent from last year's 43,261 units. The Group 7 count of 27,390 tallies this year was off 21.1 percent from the year-ago 34,721 units.

During the month, Group 8 registrations hit 6,275 units, an increase of 2.3 percent over the year-ago 6,133. But the Group 7 count in July was off 6.5 percent from last year, 4,241 versus 4,535.

No. 1 International increased its lead over Ford by more than 250 units during the month.

International added 2,622 units in July to bring its seven-month total to 16,825, which accounted for 24.52 percent of the industry total. At the same time a year ago, International was No. 2 with 17,061 tallies good for 21.88 percent of the total.

In July, Ford had 2,356 Groups 7 and 8 registrations, boosting its January-July total to 14,803. Its market share was 21.57 percent. A year ago, Ford led with 18,158 tallies accounting for 23.28 percent of the total.

recreation on wheels

7-month total up in all market segments

July RV shipments are highest since 1978

Manufacturers of recreation vehicles shipped approximately 28,800 units to retail outlets during July, an increase of 26.3 percent over the year-earlier 22,800 and the biggest total for the month since 1978.

The Recreational Vehicle Industry Assn. said July also marked the 10th consecutive month in which shipments from its manufacturer/members to their dealers exceeded year-earlier totals.

Deliveries in the first seven months of 1983 were up 37.8 percent to approximately 218,500 vehicles, compared with 158,600 units in the like period a year ago.

Through July, shipments were higher than a year ago in all market segments, but they were down during the month in two of the seven categories—folding camping trailers and Type B van campers.

The RVIA noted that continued widespread consumer optimism about the economy helped push the Index of Consumer Sentiment to near record levels in July.

"Although tempered by concerns over increases in interest rates, the index reached a level of 93.9 points in July, up slightly over a year ago," an RVIA spokesman said.

• "The July survey showed that consumers appear to be more willing now to use accumulated savings or to incur new debt to make major purchases than at any time in the last three years," he added.

Shipments of motor homes of all types in the first seven months increased 55.5 percent to approximately 39,800 units, compared with 25,600 at the same time in 1982.

Conventional (Type A) motor homes were up 63.2 percent through July, from 11,400 ve-

Record profits, sales reported by Fleetwood

RIVERSIDE, Calif. — Fleetwood Enterprises, Inc., reported that sales and earnings for the quarter ended July 31 were the best for any quarter in the company's history.

Net income more than tripled to approximately $19.1 million from the $5.9 million reported for last year's first quarter. Sales increased to $363.8 million, an 36 percent gain over the $195,404,000 recorded in last year's initial quarter.

In announcing the quarterly performance, Fleetwood President Glenn Kummer said:

"Last year, the company achieved the highest sales and earnings figures in its history. We are especially gratified that the company is continuing to register record-breaking results. This is indicative of widespread and increasing consumer demand for high-value Fleetwood

Continental and Town Car return for '84

Mark VII is the newest Lincoln

There's a "hot-rod Lincoln" for 1984 — the Continental Mark VII.

The all-new Mark VII, especially the LSC version, is Lincoln's move into the sporty-car market. The standard powertrain on the Mark VII is the 5.0-liter V-8 with electronic fuel injection, controlled by a fourth generation electronic engine control system (EEC-IV), matched to a four-speed automatic overdrive transmission.

Also available is an entirely new engine — a 2.4-liter I-6 turbocharged diesel, manufactured for Ford in Europe, teamed with a ZF four-speed automatic transmission.

The LSC version has an air-spring suspension system calibrated to be 40 percent stiffer than that of the standard Mark VII.

Along with the standard and LSC models, the car is also available in two all-new Designer Series: The Bill Blass edition and the Gianni Versace edition. All versions are two-door, five-passenger coupes. Pictures and additional details of the Mark VII appeared in the July 11 issue of AUTOMOTIVE NEWS.

The Continental four-door sedan for 1984 features a new suspension system with air-springs developed specifically for Lincoln-Mercury. That system is also available on the Mark VII.

The powertrain is a 5.0-liter V-8 with four-speed automatic overdrive as standard. A 2.4-liter I-6 turbocharged diesel is optional.

Other features include a new electronic temperature control system with rear compartment heat duct, power mini-vent windows, an automatic radio antenna, digital fuel gauge and electronic odometer with multi-color graphics.

Besides the basic model, the Continental is available in two Designer Series — the Givenchy and the Valentino. All are four-door sedans.

The '84 Lincoln Town Car has gas-pressurized shock absorbers on all four wheels to increase riding smoothness. A standard automatic climate control system features a new automatic blower control that decreases blower speed when a preset temperature is reached.

The Town Car is powered by a 5.0-liter V-8 engine with a four-speed automatic overdrive transmission.

New options include a power decklid pulldown that automatically latches the decklid.

The Town Car is available in the standard and the Signature Series and the Cartier Designer Series. All are four-door sedans.

High-tech Continental

The 1984 Continental features a new suspension system with electronic air-springs developed specifically for Lincoln-Mercury. A new option is a 2.4-liter I-6 turbocharged diesel engine.

Kegley appointed

MANSFIELD, O. — Donald R. Kegley has been named president of National Seating Co., maker of truck and bus seats. He succeeds George G. Kastran, who retired. National Seating is a subsidiary of Chromalloy Corp., St. Louis.

Registrations up 32 pct. in July to 258,967 units

Continued from Page 14

were 17.8 percent higher than a year ago in the January-July period. The total was 1,531,850, compared with 1,300,285 in 1982. Registrations were up this year in two of the three light-truck groups.

In Group 1, the seven-month total was 853,958 units, a gain of 18.7 percent over the year-ago 719,249. Group 2 was up 17.6 percent, 669,432 versus 569,032. Group 3 was down 29.5 percent to 8,460 units, compared with 12,004 last year.

Seven-month medium-truck tallies were up 3.2 percent, from 22,802 units in 1982 to 23,543. There were advances in two of this market segment's three weight classifications.

Group 4 registrations through July totaled 181 units, compared with only five last year. Group 6 was up 5.4 percent to 23,049 units, versus 21,864 a year ago. Group 5 was off 66.5 percent, from 933 units in 1982 to 313.

• Heavy-truck registrations for the seven months were down 12 percent to 68,615 units, compared with 77,982 at the same time last year.

Group 8 registrations through July totaled 41,225, a decline of 4.7 percent from the year-earlier 43,261 units. There were 27,390 Group 7 tallies this year, down 21.1 percent from last year's 34,721 units.

Registrations of imported trucks through July were up 27.2 percent to 227,382 vehicles, compared with 178,729 a year ago.

Ford increased its lead over Chevrolet in July by about 5,000 units, and for the seven-month period, its margin advanced to 21,427 units. Ford's share of the industry total was almost 32 percent, a gain of 1.50 percentage points over last year, when it was No. 2 in registrations.

Chevrolet's seven-month share was 30.61 percent, a decline of 1.41 points from a year ago.

ATTENTION DEALERS

ATTENTION: CAR DEALERS ! DON'T MISS OUT ON THE HIGH PROFITS BEING MADE IN THE FINAL SALE OF DELOREAN MOTOR CARS.

Consolidated International of Columbus, Ohio, has acquired the entire world inventory of 1983 DeLorean Cars and is offering them to Dealers at Liquidation Prices. Since these luxury cars are no longer being manufactured, the demand is stronger than ever before.

CONSIDER THESE FACTS:

1. No Minimum Order (buy 1 or 100).
2. No Franchise Fee.
3. Each DeLorean is delivered to your door, *FREIGHT PAID,* and completely prepped and ready for delivery.
4. Each Factory New DeLorean is backed with a comprehensive 12 month/12,000 mile Service Contract (an optional 5 year /50,000 mile Service Contract is available).
5. We back you with an aggressive Advertising Campaign *(i.e. Wall Street Journal, N.Y. Times, L.A. Times, Autoweek, T.V. & Radio).*

We can arrange leasing for periods 6 months to 4 years.

HURRY ! Don't miss out on this once in a lifetime opportunity to enhance your Dealership's image as well as your *Bottom Line.* For further details call us at (614) 224-1297.

Advertising by domestic auto makers tops $1 billion mark

By Joseph Bohn
Marketing Editor

When the auto industry talks about $1 billion investments, it's usually referring to plants, tooling and equipment.

Now, however, advertising by domestic auto makers is a $1 billion-plus yearly outlay that continues to escalate in good times or bad.

In 1982 six domestic car producers (General Motors, Ford Motor Co., Chrysler Corp., Volkswagen of America, American Motors and American Honda) spent $1.2 billion, or 16.9 percent more than the previous year, to launch products, polish images and urge buyers to consider their cars and trucks.

The only company to cut back was Chrysler, according to Advertising Age estimates. Chrysler expenditures dropped about $20 million to $173.9 million in 1982.

General Motors spending was up a hefty 36.9 percent to $549.0 million, partly because of interest subvention and other special promotions. Essentially, these doubled the "nonmeasured" media category in Ad Age's estimates which went to $154.6 million from $65.0 million the previous year.

Newspaper spending at GM also jumped to $82.0 million from $65.5 million. Spot TV almost doubled to $27.2 million from $13.9 million. Magazines climbed to $86.1 million from $65.4 million.

Industry observers view N. W. Ayer, one of GM's corporate ad agencies, as a real comer after it snatched a new $15 million "We're the best GM ever" campaign.

Chevrolet ad spending increased to an estimated $142.9 million from $127.5 million. Network TV jumped to $75.4 million from $59.2 million. Total TV outlay increased to $80.3 million from $62.5 million. Magazine outlay increased to $26.4 million from $19.6 million. Newspaper increased to $31.9 million from $25.5 million.

A special section on what automotive marketing and advertising strategists are planning for 1984.

Buick ad costs rose to $43.7 million from $36.6 million. TV was down a bit at $16.3 million from $16.9 million in 1981. Newspaper rose about $4 million at Buick to $16.2 million. Magazine expenditure climbed to $7.9 million from $5.9 million.

Oldsmobile upped ad spending to $44.8 million from $39.0 million. TV jumped to $17.6 million from $14.8 million; magazines to $10.0 million from $7.7 million, and newspaper to $15.8 million from $12.7 million.

Pontiac advertising rose a bit to $47.4 million from $45.0 million. Magazines reached $10 million from $4.7 million the previous year. Newspaper outlays jumped to $12.8 million from $9.8 million. TV remained the same at $29.0 million compared to $29.4 million the previous year.

Cadillac ad outlays jumped to $21.2 million from $19.6 million. TV totaled about $9.5 million from $7.5 million the previous year. Newspaper climbed to $5.9 million from $4.7 million. Magazines were up to $5.1 million from $4.7 million the previous year.

Ford Motor Co. ad outlays of $313.4 million were up about 9.4

Women could spark domestic-car market

Study shows they're pro-Detroit in buying attitudes

By John A. Russell
New York Staff Writer

NEW YORK.—Forty-five percent of women who recently purchased a new automobile will buy a domestic make the next time around, according to a study released by Conde Nast Publications.

Women are firmly behind U. S. auto makers and hope domestic manufacturers make strong inroads against imports, but still are dissatisfied with the approaches domestic auto makers use toward the women's market.

The Conde Nast study is the second part of a research effort started in 1981. Surveyed were 2,000 women who purchased cars between Oct. 1, 1981 and Sept. 30, 1982. The latest study, a more finely honed analysis of the marketplace, for the first time measures buyer attitudes as well as makes and models bought within each market segment.

Major points developed in this study were:

- 72 percent of those surveyed purchased domestic automobiles.
- Women place high importance on car dependability.
- Women place as much importance on functional aspects of the car as they do on the aesthetics.
- While pro-Detroit in buying attitudes, the women also believe Detroit brought on its own problems.
- The majority of women are the primary decision makers in the purchase of a new car with only 30 percent reporting the decision is shared equally with someone else.

The study, made available exclusively to Automotive News, also reported that of those surveyed, 23 percent purchased Japanese cars and five percent purchased European models.

In its first study in 1981, Conde Nast concentrated on differences in perception between men and women about automobiles. It also went on to segment the women's market into identifiable groups.

The second study does not concentrate on the differences, but on attitudes of women within various market segments as well as the makes and models they purchased during the survey period.

• According to John McClure, Detroit manager for Conde Nast, the second study identifies the segments as well as the interests of the women in the segments. "We can look at the reasons for buying and look at the cars they own," he said, noting the segments can be defined by car ownership.

While the first study concentrated heavily on differences in perception between men and women regarding the automobile, it split the women's market into six specific segments:

1. The budget minded consumer whose primary concern was dependability and economic related issues. Conde Nast found these women regard their automobile as primarily transportation and do not find cars to be a source of personal pride.
2. The personal performance-car seekers who are conscious of their cars, prefer sporty models and are unconcerned with economic issues.
3. Traditional luxury seekers who also have a sense of pride in their cars, want fully equipped cars and are unconcerned with economics.
4. Family-car buyers who are cost conscious, want to extend the life of their cars and do not consider cars fun.
5. Efficiency seekers want fuel efficiency and front-wheel-drive cars.
6. The uninvolved.

Following this same pattern, Conde Nast again broke the market into segments for its second study. These were the Domestic Budget Minded: Nononsense Value Seekers; Traditional Luxury Seekers; Personal-Performance group, and Family Car group. There also was a sixth segment of women very impressed with front-wheel-drive cars, but they were statistically insignificant.

What emerged were both demographic and attitudinal aspects of each group, and types of cars they purchased during the survey data.

Women place as much importance on vehicle function as they do on aesthetics.

Certain other conclusions could be drawn from the research, according to Eckart L. Guthe, corporate marketing director for Conde Nast, who said the market is entering the era of the personal car, with the family-car concept weakening. Also, the general market profile of women is changing in the U. S. with three out of four of the women surveyed employed either full or part time.

In addition, 41 percent of women surveyed graduated from college, while the household-income median was $33,850. More significantly, 85 percent of the women surveyed were the head of household.

As a total, women contributed 38.3 percent of household income. While 64 percent were married, 20 percent were single and 16 percent were widowed/divorced or separated.

Guthe noted that while each segment of the market had different demographic profiles, and there were differences between domestic-car, Japanese car and European-car buyers, what is emerging is a dual-family unit requiring two separate sales pitches while remembering that women in a family unit have enormous veto power, if not majority decision-making power.

Domestic-car buyers had a higher median age than the

Continued on Page E-6

Nissan overtakes Toyota in ad spending

Quotas on Japanese imports haven't dampened advertising enthusiasm for foreign-made vehicles. Ad spending for imports soared 28 percent in 1982.

Among the highlights were a 34 percent increase in Nissan Motor Corp. U.S.A. ad spending and 73.5 percent increase by Mazda Motors of America (Central and East).

Expenditures were also buoyed by new marketers Mitsubishi Motor Sales of America and American Isuzu Motors, which were still gearing up.

Generally speaking, although the Japanese operate under voluntary export restraints, they've been spending huge amounts to push truck sales in the U. S., where they still have an open market and competition from domestics has stiffened appreciably.

In the spending derby, Nissan overtook Toyota Motor Sales U.S.A. for the first time as the biggest import spender, according to Advertising Age.

European importers, in contrast, continued to up spending at a more controlled, moderate rate.

Overall, tabulations show the list of Japanese and Europeans (Volkswagen of America and American Honda are listed among domestics because of their U. S. car-building) spending $376,098,300, compared to $293,719,200 in 1981.

Spending leader Nissan accounted for $117,566,700 of the industry total, compared to $87,884,100 in 1981.

It was followed closely by Toyota, with $111,343,200 in outlays, compared to $106,186,700 the previous year.

Mazda spent $70,531,400 compared to $40,648,400 in 1981.

Subaru of America spent an estimated $25,375,400 compared to $22,000,000 the previous year, according to Leading National Advertiser reports and Automotive News estimates. (Figures for BMW, Volvo, Isuzu and Mitsubishi are similarly derived.)

BMW of North America spent $19,480,300 compared to $19,000,000 in 1981; Volvo of America, $14,265,300 compared to $12,000,000; Isuzu, $9,600,000 compared to $6,000,000 and Mitsubishi, $7,936,000 with no comparable estimate for 1981.

$1 billion

Continued from Page E-1

percent from 1981's $286.6 million.

Ford's measured ad spending increased to $288.3 million from $264.2 million. Broadcast TV was $151.1 million, up from the previous year's $113.9 million.

Spending at Chrysler Corp. dropped to $173.0 million, a decline of 10.4 percent from the previous year. Spot radio suffered the biggest fall to $12 million — a 76 percent decline from 1981, while most other expenditures were about the same. Network TV jumped to $68.2 million, a 24.5 percent increase.

Volkswagen of America advertising jumped 20.9 percent to $98 million in 1982.

According to Leading National Advertisers, VW spent just under $20 million to advertise the Rabbit line in 1982. LNA says totals for other models were: Audi, $11.4 million; Jetta, $4.5 million; Scirocco, $4.2 million; Porsche, $8 million; Vanagon, $2.7 million.

VW also spent $9.3 million to introduce the Quantum.

American Motors Corp. increased its ad budget by 2.9 percent in 1982 to $72 million. Alliance was introduced with a $20 million campaign in the fall 1982. Expenditures for other lines were trimmed. The biggest media increase was in network TV, which climbed to $26.0 million from $10 million the previous year. Spot TV dropped some $4 million, while print was up slightly.

American Honda, traditionally a more modest spender than Detroit companies, reported only modest outlays of $27.2 million in 1982, up from $23.7 million the previous year.

Honda officials said they are spending $8.9 million for network TV in 1983, plus another $5.0 million for NFL Football TV and $2.5 million in spot TV.

Honda also is spending $9 million in what it calls "national print" (magazines), $1 million for "broadcast sports" (radio), $500,000 in "sports print" and $1.1 million in network radio.

Honda also is spending about $5 million in such things as auto shows, which includes extra newspaper; the youth market, which includes "wallpaper journal" type posters in college stores, and outdoor. Its total 1983 spending is $33 million.

American Honda last year began producing cars in Marysville, O.

Analysts look for big sales leap in 1984

Automotive News *panel predicts 10.3 million cars, 3.5 million trucks*

By Kathleen Hamilton
Financial Editor

New-car sales will go up by a giant leap in 1984, according to market analysts who called the shot pretty accurately a year ago.

Last year at this time, eight top auto-industry independent analysts and economists forecasted 1983 with slightly more optimism than the year proved to warrant. Nevertheless, their composite prediction wasn't off much.

It was 9.5 million car sales for 1983 calendar year, which now is expected to be in the 9.1 to 9.3 million range.

Three of last year's forecasters accurately predicted the 1983 total: John Hammond, economist and director of automotive market consulting at Data Resources Inc., 9.3 million; Arvid Jouppi, independent analyst based in the suburb of Grosse Pointe, Mich., 9.1 million; and Maryann Keller, 9.3 million. Those three, plus Harvey E. Heinbach, of Merrill Lynch, called 1982 car sales on the nose last year.

Keller last year was auto analyst for Paine Webber Mitchell Hutchins Inc. This year she is on the other side of the counter, buying stocks as a money manager for Vilas-Fischer Assoc. Her successor at Paine Webber, Ann Knight, is taking her place this year in the annual survey conducted by AUTOMOTIVE NEWS.

Two others joining the panel this year are Peter D. Zaglio, auto analyst and first vice president of Lehman Brothers Kuhn Loeb Inc., and Wesley Stuchlak, who replaces William R. Pochiluk as economist representing Chase Econometrics. Stuchlak is Chase manager of North American automotive anaylsis.

This year's panel forecast for 1984 ranges from 10.0 million car sales by Zaglio and Arthur D. Davis, analyst for Prescott, Ball and Turben, to 10.7 million by analyst David Healy of Drexel Burnham Lambert. The average is 10.3 million, downgraded from the last survey.

All agree 1984 will be far better than 1983 and 1985 will be even better. Disagreement arises over whether 1985 or 1986 will be a cyclical peak. In Stuchlak's analysis, sales will continue to creep up even after that.

Even though the analysts polled a year ago were close in their forecast of the truck market — a 2.9 million composite versus what's shaping up as a 3.0 million 1983 total — they apparently hadn't counted on light trucks taking as many sales away from autos as they did.

Lower fuel prices and new compact pickups will continue to produce growth in the light-truck sector at least into 1985, most forecasters believe, and they expect the upturn to continue into 1986. Stuchlak and DRI's Hammond said gasoline prices will decrease until 1985, when they will increase in real terms.

The last time gasoline prices rose was 1982. Barring an unexpected development, the analysts said fuel-price increases over the medium term are likely to be 1 to 3 percent a year, according to Hammond.

Such a fuel scenario would benefit truck sales. But the analysts also see a nationwide economic recovery raising medium- and heavy-truck sales, probably beginning in 1984, according to Hammond and Merill Lynch's Heinbach.

Paine Webber's Knight discounted the effect of fuel prices on auto sales, saying the impact will come in the type of cars sold rather than volume. She based her upbeat forecast for 1984 (10.5 million cars) and 1986 (10.8 million) on expectation of increased disposable household income and GNP growth rates of 4.2 percent in 1984 and 4.5 percent in 1985. But demographics don't support a return to sales levels of the late 1970s, Knight said.

Unemployment rates, falling to 8.2 percent in 1985, should also fuel an auto sales rebound, said Drexell Burnham & Lambert's Healy.

Low inflation rates (4.5 percent next year and 4.6 percent in 1985) and stable car-loan interest rates also will contribute, Healy said. His outlook for the next three years is the highest of any forecaster.

Healy, Heinbach and Jouppi, along with David Eisenberg, auto analyst for Sanford C. Bernstein & Co., who is not on this year's panel, were closest in calling '83 truck sales last year.

Healy, Heinbach, Knight, Jouppi and Zaglio predicted 1985 will be the sales peak in the current cycle.

Davis has doubts. "Chances are the upset year could be 1985," said the Prescott, Ball and Turben analyst. If General Motors or Ford Motor Co. is faced with a long strike in 1984, sales could be pushed into 1985, he said.

On the other hand, if export restraints don't end or are lifted, there could be a shortage of small cars that would chop into 1985 sales figures, he said.

If the 1984 boom is so great as to collide with the budget deficit to produce big interest-rate increases, 1986 might be a better car-sales year than '85, Davis said.

The current high level of competition for small-car sales could draw blue-collar workers back into the new-car market in late 1984, Davis said. Nevertheless, his forecast for the next three years is the most pessimistic of the panel members.

DRI's Hammond sees a sales surge in 1985 to 1987 in which "consuming household units" will increase, as both the number of adult drivers and new households increase. Along with this, Hammond sees a higher rate of car ownership ahead; these won't be first-time car buyers, but people looking to trade up from lower-priced new cars or used cars they now own, he said.

Dividing the forecast into calendar years poses some distortion. A quarter-by-quarter analysis by Hammond calls for the auto sales rate to be relatively stable from the end of 1984 through 1986. The market traditionally plateaus for such a period, then abruptly plummets, Hammond said.

Stuchlak's forecast doesn't factor in a recession. But an interest-rate rebound in 1985 could reduce car sales in 1985 and 1986, he said.

Jouppi, the forecaster with the clearest crystal ball last year, predicts interest rates in 1984 and 1985 "will go back to their old-fashioned level of real growth plus three or four percent in real money."

Jouppi's prediction of 10.3 million car sales in 1984 and 11.0 million in 1985 is based on several factors, the biggest of which he terms "market pull"—auto makers expanding capacity in the proper segments to meet demand generated by demographics and employment gains.

The most startling of Jouppi's forecasts is that 1984 will see shortages in heavy trucks — Class 8 vehicles especially, but in Class 7, too.

"Too many heavy trucks have been parked in lots during the recession, and they have been cannibalized" for parts, Jouppi said.

Quotas alter sales plans

Japanese 'Big Two' explain strategies

By Matt DeLorenzo
Los Angeles Reporter

LOS ANGELES. — Quotas on Japanese cars sent to the U. S. have been in effect nearly three years. Although not popular with the U. S. distributors of these cars and trucks, market plannnig adjustments have been made, according to officials of Toyota Motor Sales U.S.A. and Nissan Motor Corp. in U.S.A., the two largest importers.

Norman Lean, Toyota senior vice president and chief operating officer, and Chuck King, senior vice president sales for Nissan, agree that the biggest change in their strategies has been an increased push on trucks.

"I think there is only one significant difference, and that's the additional emphasis on trucks," Lean said of his company's marketing plans in light of quotas.

Increased attention on trucks has shown just what the company can do with these vehicles. Despite a 25 percent tariff, Lean said that during August, aided by a heavy TV ad blitz, Toyota dealers sold a record 26,000 pickups. The previous monthly mark was 17,000, and the company had set a goal of 20,000 sales to clear out stocks of existing trucks in anticipation of the new '84 model.

King said that during the first year of the import restraints, Nissan pulled out all stops to diminish stocks of 210s, 310s and 510s. "During the second year of restraints, we focused on pickup trucks," he said. That focus continues today. "On advertising, 22 percent used to be solely for trucks; they now account for 40 percent. Ninety percent on our incentives are truck-oriented," King said.

While Toyota has a new truck this fall, Nissan has a new source for its truck (redesigned midway through '83)—the new Smyrna, Tenn., assembly plant.

"We're not making any distinction between the U. S. and Japanese truck," King said. Eight of the company's 12 regions will receive trucks from Smyrna, while the four Western regions, including California (which represents 25 percent of the Nissan's truck sales), will get trucks from Japan.

Car strategies remain virtually unchanged by Toyota and Nissan, although they have taken different approaches to the number of models in their lines.

"As far as cars are concerned, it's business as usual," Lean said. "We're going to bring in new products we've had under development." The new vehicles, however, will cannibalize some other models, which will have reduced volumes. Lean said the company must take a long-range view of the market and at least establish a foothold in emerging niches such as minivans.

"With cars, you have to maintain a presence," Lean explained. "We want to be in a position to maintain the level of buyer intention on Toyota products."

Lean said Toyota is maintaining a high level of exposure on cars even though their number is restricted. Usually Toyota will not target a product for TV exposure unless its sales rate is at least 10,000 a month. However, with import restrictions in place, Toyota has used television for its Camry (5,000 a month) and is contemplating TV for the new Van Wagon (3,000 a month).

"We wouldn't normally use TV," Lean said of the Camry campaign, "but we did want to let people know that Toyota has a new midsize entry." Lean said the same is true for the Van Wagon: "It will generate interest in the company because the product is so unique."

At Nissan the situation is somewhat reversed. The company has used import restrictions to weed out slow moving lines and consolidate product offerings in other series. Two innovative products, the Ambivan (a minivan) and the March (a minicar), which were planned for this market, are on hold because of the restraints.

"We've been able to reduce the product line," King said of the number of models offered under restrictions. Among those to go are Pulsar two- and four-door hatchbacks and Stanza Deluxe models. Much of Nissan's car marketing effort has been concentrated on three product lines, according to King: Sentra, Stanza and 280ZX.

"We have to maintain a presence in the marketplace," King said of his car program. Although most emphasis is on three lines, Nissan will continue to sell six product lines and "remind people that we are a full-line maker. We want to be a factor in every segment," he said, "but we have to pick our spots. We have to go where the volume is and have consumer appeal."

With a new Z car coming on stream, King said considerable ad dollars will go into its launch.

Lean and King concur that the quota situation has enabled both companies to fine tune their distribution systems, resulting in more efficient operations.

"As the dealer sells cars, we track the cars and equipment to determine which particular model moves faster," Lean said. "We adjust our production, increasing those cars and reducing production of cars that don't move as fast."

"Our car inventory has declined by 64,000 versus what it was a year ago," King said of Nissan. "We've developed a system to expedite vehicles. We're able to allocate cars while they're in ships on the water."

King said each vehicle is identified by dealers while it's still at sea and consequently, there is no holding of cars at the port. "They (the dealers) know what they're going to get. Distribution efficiency is vital," King said, adding that under quotas, "you can't manufacture vehicles out of a distribution system."

There are frustrations for any marketing company that has its product supply restricted, King said. "We have a limited ability to merchandise product. However, it has, in a sense, forced us to be more creative and efficient in the number of products we order and where we ship them."

European sales of Ford cars in August set record

DEARBORN. — Sales of new Ford cars in Europe during August are estimated to have captured 18.3 percent of the market, an alltime record share, according to Ford Motor Co.

Ford said it sold a record 157,000 new cars in Western Europe last month, while total European Ford car sales in the first eight months of the year totaled a record 950,000 units, for an estimated 13.1 percent share of the European market.

In Britain during August, Ford said it had a 30.92-percent share of the market, while in Germany, Ford had its best August volume and share—16,500 units, 12.2-percent share — since 1978.

Ford said latest statistics show that it has three cars in the European top 10, with Escort as Europe's overall best-seller followed by Sierra in fourth place and Fiesta in eighth.

Sundeman heads Saab's U.S. bus operations

ORANGE, Conn. — Rolf Sundeman has been placed in charge of the Scania Bus Division of Saab-Scania of America. He formerly was managing director of Scania-Bussar AB, of Sweden.

Other senior staff members, all from Scania-Bussar, are: Josef Schrotti, technical director for engineering and production; Olof Nilsson, technical manager; Per Olof Rudbeck, design manager for the bus body; Arne Oberg, production supervisor, and Arne Wettler, purchasing manager.

A marketing manager will be recruited locally, according to Robert J. Sinclair, Saab-Scania of America president.

The Scania Bus Division will begin equipping its plant here this fall, and is scheduled to begin deliveries to customers in the second half of 1984.

Initial capacity will be 250 Scania transit buses a year with a work force of 250 persons.

Volvo names Combee to planning post

ROCKLEIGH, N. J. — Volvo has named Donald L. Combee planning and administration manager and a member of the North American Car Operations management group.

Combee formerly was assistant controller of Volvo of America Corp. He joined the company in 1970.

Makers build 155,891 for week

Car output highest in 28 months

By Mary Beth Mayer
Staff Writer

With production of the 1984 models fully underway, domestic auto output reached its highest point in more than two years last week.

Overtime at 11 assembly points helped boost production last week to an estimated 155,891 units, up 4.14 percent from the previous week's 149,699, and up a considerable 50.42 percent over last year's 103,638 units.

The week's total was the highest since the 162,485 tallied in the week ended May 23, 1981.

Breakdown for the week by company was: General Motors, 57.76 percent; Ford Motor Co., 25.00 percent; Chrysler Corp., 12.12 percent; American Motors, 2.89 percent; Volkswagen of America, 1.51 percent, and Honda, 0.72 percent.

So far this year, there have been 4,759,830 cars assembled, a 24.33 percent gain from 3,828,620 built in the same period last year.

Operations resumed last week at GM's Norwood (O.) and Van Nuys (Calif.) Camaro/Firebird plants after being down because of a transmission shortage.

GM had its Fairfax (Kans.) and Flint facilities working two shifts Saturday (Sept. 24).

Five Ford plants worked daily overtime last week. Working extra hours were: Chicago, Kansas City, Lorain (O.), St. Louis and Wayne (Mich.). Lorain, St. Louis and Wayne also operated Saturday.

Chrysler slated daily overtime at four plants — Belvidere (Ill.), Detroit Jefferson, Newark (Del.) and St. Louis No. 1.

Chrysler's St. Louis No. 2 plant has begun to produce the Chrysler Fifth Avenue, Dodge Diplomat and Plymouth Gran Fury, which were previously produced at the company's Windsor (Ont.) plant.

Fate of AMC Canada plant tied to current labor talks

By Marjorie Sorge
Labor Editor

The current contract between the UAW and American Motors in Canada will expire at noon tomorrow (Sept. 27).

The contract covers the 950 UAW-represented hourly workers at AMC's Brampton plant in Ontario. That facility builds Eagles at a rate of 120 a day.

Workers have approved a strike mandate by 97 percent.

The outcome of the current negotiations could decide the fate of the Brampton plant. AMC President Jose J. Dedeurwaerder has said the future of that plant lies in the attitude of the workers. Last January he said, "We don't want to leave Canada, but we need a cooperative attitude on the part of the union."

In 1982, the Brampton local refused to consider a new AMC-UAW contract which involved an employe investment plan. That plan was negotiated in the U. S. Hourly workers invested between $110 million and $115 million, earmarked for AMC's $1 billion new-product program.

That same year, Dedeurwaerder said the Canadian segment of the UAW took a destructive stance when it refused to negotiate an employe investment plan.

Negotiations between the two sides began Aug. 4. The current contract was due to expire at midnight on Sept. 16, but the UAW elected to extend the agreement until Sept. 27.

The company has asked for the elimination of the Sept., 1983, cost-of-living-adjustment payment due in December and the deferral of six quarters of COLA for 18 months. It also wants to abolish the eight paid absence allowance days and wants no wage increase during the proposed four-year pact. AMC also wants to reduce new-hire wages and benefits.

According to the UAW, these concessions have been tabled.

The union is seeking the Canadian pattern won at General Motors and Ford which includes annual 3-percent increases and a Canadian COLA.

Under the current formula COLA is figured on one cent raise for every 0.26 percent rise in the combined Canadian-U. S. Consumer Price Index. In the Ford and GM contracts, COLA will be figured on a Canadian index beginning in March, 1984. The UAW has said the Canadians were suffering under the old formula because Canadian inflation is so much higher.

GM gets better ratings on $22 billion of debt

NEW YORK. — Moody's Investors Service raised ratings on $22 billion worth of General Motors and GMAC notes, debentures and bonds.

Moody's said the action reflected improvements in GM profits and business position. The move will reduce interest rates paid by GM, but GM declined to estimate its savings.

Auto production in Canada jumps to 13-week high

With General Motors back on a full production schedule after holidays and slowdowns during model changeover, Canadian auto production last week was the highest it has been in 13 weeks.

Last week's estimated output was 17,942, up 22.06 percent over 13,985 assembled the previous week and 31.69 percent over 13,625 built in the year-ago week.

During the week ended June 25, Canadian auto makers completed 22,048 units.

So far this year, 695,933 units have been assembled, up 6.34 percent from 654,454 completed in the year-ago period.

Canadian truck manufacturers targeted last week's output at 12,187, 2.55 percent below the 12,505 built the week before, but 46.06 percent over the 6,574 finished in the year-ago week.

Year-to-date, the makers have completed 379,575 trucks, up slightly from 377,699 finished in the year-ago period.

Chrysler Corp.'s Windsor car facility is retooling for its minivan, which it will begin to produce in early October.

Truck production of 55,523 slated, tops since July

Overtime schedules at eight assembly points upped last week's estimated domestic truck production to 55,523 units, the most for any week since 55,819 trucks were completed in the period ended July 14, 1979.

Last week's total rose 4.96 percent from the previous week's 52,902, and was up a whopping 95 percent from 28,474 units built in the comparable period last year.

Year-to-date, the makers have assembled 1,654,666 units, a 12.56 percent gain from 1,470,109 built at this time last year.

Saturday (Sept. 24) overtime was scheduled at General Motors' Moraine (O.), Pontiac and St. Louis points. Moraine worked one extra shift and Pontiac and St. Louis operated two extra shifts.

Ford Motor Co.'s Louisville, Norfolk, Michigan and Twin Cities facilities worked daily overtime last week. Louisville also was up on Saturday.

Chrysler Corp.'s Warren (Mich.) plant also worked extra hours last week.

'84s sizzle in showroom; dealers' optimism soars

By Jim Plegue
Staff Writer

Something special is happening. Consumers are buying cars. Salesmen are enthusiastic. Dealers have few complaints. Some are even saying nice things about the factory.

After three years of terrible sales, dealers are viewing the '84 model year with a genuine upbeat attitude. Not that dealers didn't remain optimistic throughout the slump, but such optimism was always qualified with "next-year" statements.

Well, that "next year" may have finally arrived — at least in the opinion of many dealers surveyed last week by AUTOMOTIVE NEWS. Dealers aren't talking '79-level sales just yet, but they're thinking about it.

"Buyer attitudes are great," said a sales manager for a large Chevolet dealer. "Consumer interest in automobiles is better than last year. It hasn't come back yet to the attitude of '78 and '79, but it's much better than it's been the last couple of years."

Ford Motor Co., General Motors and American Motors/Renault/Jeep dealers officially unveiled their 1984 models on Sept. 22. Chrysler Corp. dealers inaugurated the new year last Thursday.

"Everything sells well — from the Turismo right on up to the New Yorker Fifth Avenue," said Jeff Palmer, general manager for Golden Chrysler-Plymouth in Philadelphia. "I'm hoping this will be one of the best years we've ever seen."

Palmer said Golden retailed 375 new Chrysler-Plymouth models last year. He expects to top 600 sales during 1984.

• "I would say that we're probably sitting on the best car lineup that I could envision," Palmer said. "I wouldn't want to be anyplace else right now but with Chrysler."

A few years back, that comment would have been a rare one, indeed, for a Chrysler dealer. And Palmer's not the only dealer who is proud of his products.

"I don't think Ford has to apologize for anything that it's come out with in the last couple of years," said Mark Maddock, sales manager of Downtown Ford Sales, a large Sacramento dealer. "I think Ford has products that are equal to or better than anything that's imported."

Maddock said Downtown Ford normally sells about 2,400 new cars and trucks per year. His sales are running 38 percent above last year. Hot models in Sacramento are Tempo, Thunderbird, Ranger, Bronco II and the full-size Crown Victoria — "but you can't get them."

All Ford and Lincoln-Mercury dealers complained of shortages of the full-size cars.

In fact, inventories — or rather lack of them — were the most common complaint of dealers.

Dick Sassi, general manager of Lynch Buick Co., Chicago, needs Regals. Normally, he said, the dealership enters the new model year with about 100 Regals (both carryover and new) to sell. Regal sales account for 40 percent of his business. But Sassi said he only has about 35 Regals in stock, 28 of which are demo models.

Though Regal is the volume car, Sassi said big-car sales are booming — up 140 percent last month over previous months — and that the front-drive Century, a slow starter, "has just taken off in the last three to four months."

• "I could sell anything if I had the cars," said Leonard Lucas, general manager of Keystone Chevrolet Co., also of Chicago. "They're coming in and asking for everything."

Cavalier is Keystone's volume

Escort ragtop

For Ford by Karmann

Ford of Europe's convertible version of the Escort is at last going into production. It will be made—at a rate of up to 10,000 a year — by Karmann, of West Germany, which used to make the cabriolet versions of the Volkswagen Golf (Rabbit). There will be Escort 1.3 and 1.6-liter GL versions as well as a sporty XR3i derivative.

Chrysler discounts up; '84 prices hiked $191

By John K. Teahen Jr.
Managing Editor

Chrysler Corp. has sweetened the dealer discounts on some of its cars and has posted a price increase averaging $191, or 1.9 percent, on its full range of '84 autos.

Chrysler also placed stickers of $8,308 on its new Dodge Daytona sport coupe and $8,648 on the new Chrysler Laser sport coupe.

The discount changes improve the dealers' profit potential on various models in some of the corporation's better-selling lines.

From the customer's standpoint, the discount revisions mitigate some of the '84 price hike because dealers will be able to slice a few extra dollars off the sticker in writing the deal.

Discounts were increased on models in six car lines. They were reduced on two other models.

AUTOMOTIVE NEWS sources last week supplied the following figures on Chrysler's discount revisions:

1. On the base two-door and four-door sedans in the Plymouth Reliant and Dodge Aries lines, the dealer discount now is 13 percent, up from 12 percent for '83.

2. All Chrysler LeBaron models have a dealer discount of

breaking news

Japan eyes higher quota for U. S.

WASHINGTON.—The Japanese Government is willing to impose a fourth year of restraints on auto exports to the U. S. but wants to raise the annual quota from the current 1.68 million, possibly to 2 million, according to a source traveling here with Sosuke Uno, head of Japan's Ministry of International Trade and Industry. Japan wants the issue settled before President Reagan's trip to Japan in November.

Ford, U. S. disagree on price of air-bagged cars

WASHINGTON.—Ford Motor Co. and the General Services Administration are at an impasse over the prices Ford wants for a fleet of 1985 four-cylinder cars equipped with driver-side air bags. Ford wants much more than the government is paying Chrysler for 1984 four-cylinder K-cars. Vehicle prices—not prices for air bags, antilacerative windshields or high-mounted taillights on these cars—are the stumbling block.

Chrysler likes EPI, will boost application

DETROIT. — Chrysler Corp. is stepping up its use of single-point, or throttle-body electronic fuel injection dramatically. Introduced in a few E-body cars in the '83 model

Sales are strong; problems appear solved; Cavalier eyes top spot in industry

It's turnaround time for much-maligned GM J-cars

By Kathleen Hamilton
Financial Editor

Can this be possible? Can Chevrolet indeed sell 360,000 Cavaliers this model year?

Can a General Motors J-car—not so very long ago cited as evidence that Detroit could not compete with Japan on small cars—become the nation's best-selling nameplate, wrestling the title from Cutlass and thwarting Ford's designs for Tempo?

Can all this happen in what promises to be another Year of the Big Car?

Yes, yes, yes and yes, says Chevy.

Indeed, the fortunes of all the J-cars have turned in recent months, pushing 1983 model year sales for the five J-cars 71 percent above 1982.

Although Pontiac isn't making any forecasts for the '84 model year, predictions from the other GM divisions indicate J-car sales should rise another 70 percent this year.

The reasons for the turnaround are many.

Among the most obvious were the powertrain improvements in 1982 and 1983 that voided the most common driver complaint in the early models: Sluggish performance.

Now equipped with fuel-injected 1.8-liter and 2.0-liter engines, the cars are both fuel-efficient and acceptable performers.

Pontiac, Buick and Chevrolet are going for even more power this year. Pontiac will be the first division to offer turbocharging in its J-car, once called the J-2000, then simply 2000 and now 2000 Sunbird. Buick also will be offering the optional Pontiac turbocharged engine, and Chevy is planning to put a new V-6 engine in the Cavalier.

• The J-cars also have clearly benefitted from quotas on Japanese cars. Introduced in May, 1981 — less than two months after the first quotas were announced — the J-cars were sized closer to what the Japanese offered than to any domestic competitor, equipped as heavily as any import and positioned squarely against the foreigners.

The positioning didn't work at all. Domestic-car shoppers were appalled by the prices, which were nearer to the bigger X-cars than to any other subcompacts. Import-car shoppers were equally appalled by the prices, which were far above comparably equipped Japanese cars.

The division back-pedaled quickly. Two of the three divisions that introduced J-cars in May, 1981, had by January, 1982, lowered their standard equipment level and slashed their base prices. Chevy's new low-

Total is 789,016; domestics up 32 pct.

Registrations for July second best of 1983

By Jenny L. King
Staff Writer

July new-car registrations in the U.S. reached their second-best total so far this calendar year and were up 25.98 percent over July, 1982.

According to figures compiled by R. L. Polk & Co., total new-car registrations climbed to 789,016 this July compared with 626,321 for the same month a year earlier. June, 1983, registrations totaled 868,738, best for the calendar year to date. July's number was 9.18 percent behind June's.

Registrations of domestic cars were up 32.64 percent July to July, bulging to 561,481 from 423,319 last year. This July was down 10.17 percent from 625,077 the preceding month.

Import registrations numbered 227,535 in July, up 12.09 percent from 203,002 in July, 1982.

Year-to-date registrations of 5,047,873 were up 14.61 percent above the 1982 sum of 4,404,430, but they were off 0.65 percent from the 5,080,733 recorded in 1981. Domestic year-to-date registrations totaled 3,562,127, up 14.12 percent from 3,121,398 in 1982, and off 1.05 percent from 3,599,909 two years ago.

Import registrations for the first seven months of 1983 reached 1,485,746, up 15.80 percent from 1,283,032 in 1982.

• In July, General Motors improved its share of the total market by an impressive four percentage points, climbing to 44.41 percent from 40.41 percent last year. Chrysler Corp. was up 0.16 percentage points, to 8.93 percent from 8.77 percent.

Ford Motor Co. dipped 0.08 percentage points, to 17.39 percent from 17.47 percent. American Motors, whose strong-selling Alliance is counted among import registrations, dropped to 0.42 percent of the total market from 0.91 percent in July, 1982. Miscellaneous domestics, formerly upheld by Checker passenger cars, dropped to 50 units from 202 units for 0.01 percent of the market compared with 0.03 percent.

Imports provided GM with most of its gain in share of the market. Imports dropped 3.57 percentage points, to 28.84 percent from 32.41 percent in 1982.

In the domestics-only market, GM climbed to 62.41 percent in July from 59.78 percent a year ago. Ford slipped to 24.44 percent from 25.85 percent. Chrysler had 12.55 percent compared with 12.97 percent a year earlier. AMC dropped to 0.59 percent from 1.35 percent, and miscellaneous domestics had 0.01 percent compared with 0.05 percent in July of 1982.

In July, imports captured 28.84 percent of the market, followed by U.S. intermediates with 26.36 percent. Imports numbered 227,535 and intermediates 208,013. Compacts (134,747) accounted for 17.08 percent; standards (103,466) had 13.11 percent; subcompacts (76,160) had 9.65 percent, and luxury models (39,095) had 4.96 percent.

A year earlier, imports had 32.41 percent of the total, intermediates had 21.40 percent, compacts had 16.13 percent, standards had 11.02 percent, subcompacts had 14.26 percent and luxury models picked up 4.78 percent.

The July, 1983, domestics-only market-class breakdown featured intermediates with 37.05 percent, compacts with 24.00 percent, standards with 18.43 percent, subcompacts with 13.56 percent and luxury models at 6.96 percent.

For the seven months, Chrysler Corp. and the combined imports were the only ones to improve their shares of the total market.

Automotive News analysis of new-car registrations based on R. L. Polk & Co. statistical report. Registrations not available for Oklahoma.

Getting it straight

Time Magazine Quality Dealer (1983) John H. Londoff, right, explains the intricacies of the Kansas Jack Lazer Beam Aligner and Magna Rack recently installed at his St. Louis-area dealership to St. Louis Cardinals shortstop Ozzie Smith, advertising spokesman for Johnny Londoff Chevrolet. Londoff hosted an open house for more than 200 local insurance adjusters and collision repair specialists. His is the first dealership in the area to use the sophisticated alignment equipment.

VW reduces diesel prices on Rabbit and Jetta models

TROY, Mich. — In an effort to improve the sales of its slow-selling diesels, Volkswagen of America has made that engine standard equipment on base '84 VW Rabbit and Jetta models and has cut prices of those cars.

The Rabbit L two-door diesel has a sticker of $6,390, down $650 from last year's $7,040 tag. The four-door diesel is $6,600, also down $650.

A gasoline engine also is available on the Rabbit L, but the two-door price of $6,530 is $240 more than last year's $6,-290.

An engine-transmission change on the Rabbit GL four-door sedan cut the price to $7,-130, down $570 from $7,700. The '84 has a carbureted gas engine with four-speed gearbox. The '83 had fuel injection (gas) and five-speed. An '84 Rabbit GL with FI and five-speed is $7,-465.

The Rabbit GTI two-door rose $360 to $8,350.

The Jetta diesel two-door sedan for '84 is $7,390, down $600 from the price of the '83 with gasoline engine. VWoA said the price is down $1,200 when the engine change and other equipment adjustments are considered.

The VW Scirocco coupe is $10,870, up $720 from the '83 price. The Rabbit convertible, at $10,980, has risen $385.

In the top-line Quantum series, the base models and the GL coupe have been dropped, leaving only the GL four-door sedan and GL wagon.

The GL sedan is $12,980, up $820, and the wagon is $13,780, up $890. Quantum standard equipment includes air conditioning and a five-cylinder engine/five-speed transmission powertrain team that is new for '84.

The Vanagon L seven-seat van is $11,675, an increase of $475.

Rabbit two-door and four-door hatchback models are built in the U. S. The Rabbit convertible and Jetta, Scirocco, Quantum and Vanagon models are imported from Germany.

$7,000 raised for cancer victim by auto people

LANCASTER, Pa. — Lancaster County auto dealers and auctioneers have helped raise more than $7,000 to assist cancer-sticken auctioneer John E. Martin.

Martin has been fighting cancer for about three months, said his employer, J. Omar Landis, owner of Garden Spot Auto Auction, Ephrata, Pa., where Martin has worked 16 years. Martin also operates his own auction, John & Paul Martin Auctioneers, of Ephrata.

The fund raising began when John Stitts, owner of Stitts 66 Auto Sales in Ford City, Pa., donated a 1975 Buick Skylark to Garden Spot. Stitts said the car could be sold and the proceeds donated to Martin.

Garden Spot raffled off the car and raised some $5,000. The winner of the car opted to take $500 and return the car to Garden Spot for sale again. Next, a group of Pennsylvania auctioneers paid $1,000 for the car and returned it to Garden Spot.

It finally was purchased for $975 by Holsinger Used Cars, Mifflintown, Pa., which promised to sell the car at retail and donate any profit to Martin.

★—No registrations for Oklahoma, 1983 and 1982.

#—Memo units are trucks which are part of the total listed above each entry. Chevrolet memo units are vans, El Camino, LUV and S-10 compacts; Ford, vans, Bronco, Courier, Ranger and Bronco II; GMC, vans, Jimmy, Caballero and S-15 compacts; Dodge, Ram 50, Ramcharger, Ram Van and Rampage; Jeep, CJs, Cherokee, Wagoneer and Scrambler. Plymouth trucks are Voyager, Arrow, Trail Duster and Scamp.

—Compiled from R. L. Polk & Co. data

Year-to-date sales top 1982 by 71 pct.

It's turnaround time for GM J-car

Continued from Page 1

priced model was the Cavalier Cadet, Pontiac's the J-2000 S, and each was several hundred dollars cheaper than the first J-cars available.

Cadillac went another route, trimming prices only a little but adding more standard equipment.

Today, the least-expensive Cavalier, 2000 Sunbird, Buick Skyhawk and Oldsmobile Firenza can be had for less than the lowest introductory prices offered in 1981 and 1982.

• Perhaps not surprisingly, the price of the average Cavalier isn't actually much different from its first introductory price. Jack A. Madejchick, Chevrolet director of marketing information and systems, said Cavalier buyers have been ordering their cars with lots of options.

But the return to the traditional domestic-car pricing strategy has worked well for the four divisions. Following a separate path, the Cadillac Cimarron's base price has risen 4 percent since 1981, despite product improvements and upgradings.

Competitors have also helped J-car sales: They have introduced new, higher-priced models that have made the Js look more attractive in price than they did originally.

Consumers have finally accepted not only the necessity for downsizing, but the fact that a new-technology downsized car can cost more than a bigger but older-technology car. This, too has worked in favor of GM's subcompact.

The Japanese, able to sell every car they are allowed to export to the U. S., have raised prices of the J-car-sized models from 8 to 12 percent during the same time the Js have held steady or declined in price.

• Chevy dealers told AUTOMOTIVE NEWS they are now selling the Cavalier against the smaller but similarly priced Ford Escort and Plymouth Horizon. Others note the J-car has taken a chunk of the X-car market from buyers wary of recalls.

But the J-cars are no longer priced like the X-cars. The J-cars are now closer to Mustang, Aries/Reliant and Volkswagen in price.

And they attract buyers as diversified as their competition. Chevrolet is finding the Cavalier attracting mostly those who bought small subcompacts before and who are ready to upgrade to a roomier, more highly equipped four-passenger car, Madejchick said.

Those buyers are frequently trading foreign subcompacts. Cavalier's buyer demographics reflect that: 55 percent white collar, 43 percent college graduates, 32 to 38 years median age.

The other divisions also term the J-car an import conquestor But for them, it provides an entry-level car for first-time buyers of their lines. Performance and sporty appearance packages are appealing to young, single affluents. Professional women provide a big chunk of the J-car markets at Pontiac, Olds, Buick and Cadillac.

In an unscientific telephone poll, dealers for those four divisions rated their J-cars lower than the divisional spokesmen did on their roles as import conquest cars. Their shoppers have been looking for a domestic car, and the toughest competition is often the other GM dealer down the street, dealers said. Nevertheless, Cadillac figures 80 percent of Cimarron's sales are conquests.

It projects the base market for Cimarron will continue to grow as the baby boomers age and move into the "near-luxury" segment.

The Cimarron, which sold 14,200 units in its first full model year, is expected to sell 23,000 in 1984 and 50,000 by the mid to late 1980s, according to Gordon Horsburgh, Cadillac director of marketing.

Although the median age of a Cimarron buyer, at 48, is a good 10 years above the median age of the Chevy Cavalier buyer, that is still young by Cadillac standards: The median age of all Cadillac buyers is 57.

Horsburgh talked about the gradual educational process that is going on at Cadillac dealerships across the nation, as the sales staffs are taught to treat 30-year-olds with beards as serious prospects.

And that brings up another factor in the J-car turnaround story: Dealer acceptance of the product. It is being viewed as an easy car to sell because it is roomier than other subcompacts and priced within reach of most new-car families.

Brand-new cars usually take two to three years to reach their sales peak, explained John R. Dabels, Buick general director-marketing and sales planning.

Buick has stressed the need to take the Skyhawk for a test drive, reasoning that 80 percent of Skyhawk buyers have never bought a Buick and so have no brand loyalty. Younger buyers are less brand-loyal anyway and will shop five or six stores before deciding on a Skyhawk, Dabels said.

• Almost to a person, dealers told AUTOMOTIVE NEWS their supplies of J-cars (and virtually everything else) are low and that they would take all they can get.

That brings out another part of the J-car's equation for success this year and last: Availability. Two of the three GMAD plants producing the cars are already on overtime on two shifts. The third plant, in Kansas City, is not running overtime because it is preparing to add a second shift Oct. 27. It will take a few months until overtime can be started at that plant, a GMAD spokesman said.

So there will be more J-cars to sell, probably beginning in November as the pipeline refills after the start of the '84 model run.

And because CAFE rules require GM to offset its increased big-car sales with fuel-efficient units, it is safe to say the optimistic forecasts for J-car sales will be met, even if that requires another round of incentives.

The Js really took off with the last round of interest-rate incentives offered by GM, dealers said. But they also agreed that the cars are now selling just fine without them.

Finally, most of the divisions are spending what they say is a disproportionate share of their advertising dollars on their J-cars, considering their volume. But that is considered necessary to attract first-time buyers. And because Chevrolet expects the Cavalier to be its No. One car this year, its ad spending will reflect that.

J-CAR MODEL-YEAR SALES

	1981*	1982**	1983***	1984****
Chevrolet Cavalier	43,700	121,000	218,000	360,000
Pontiac J2000/ 2000/2000 Sunbird	34,100	59,000	78,000	n/a

Rouge Steel jobs saved as workers OK pay cut

By Marjorie Sorge
Labor Editor

DETROIT.—Workers at Ford Motor Co.'s Rouge Steel operation have approved a new concessions contract which will cut their wages by about $4.13 an hour.

The new agreement means the workers will keep their jobs. Ford had said if concessions were not made the operation would close. Workers at the plant were making about $28 an hour in wages and benefits.

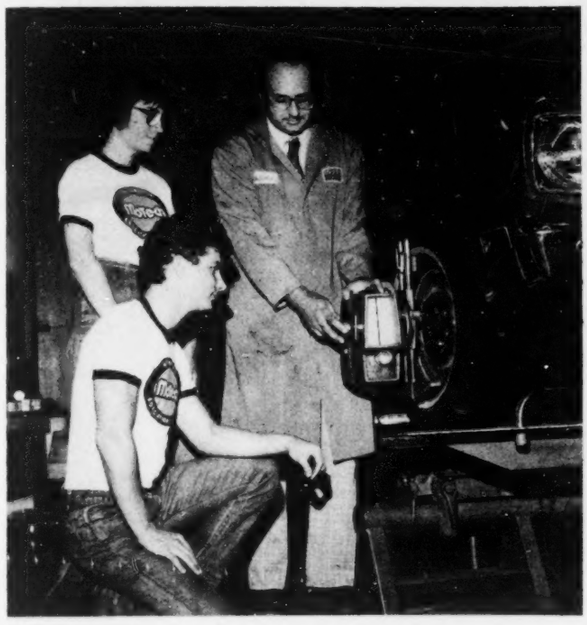
There are 3,400 active workers at the plant. Between 650 and 750 workers currently on layoff are being called back beginning today (Oct. 3), leaving about 300 off the job.

The new agreement, which expires July 31, 1986, "trades money benefits for the opportunity to retain the jobs of thousands of workers in the Rouge plants," according to a special edition of Ford Facts published by Local 600, which represents those workers.

Under the plan, the existing incentive rate is reduced by 99 cents and incentive plan earnings are reduced by 20 percent.

In addition the cos -of-living-adjustments (COLA) formula will be revised from one cent for every 0.26 percent change in the Consumer Price Index to one cent for every 0.30 percent change effective Sept. 1, 1984.

The contract also eliminates the payment of deferred COLA from March, June and September, 1982; cuts holiday and vacation pay and overtime premiums, and reduces the number of holidays and the amount of vacation allotted.



Institute of Engineering renaissance

Michelle Murawa, left, and Frank Fodale, center, learn about wheel alignment from MoTech chassis instructor Geoff Blain at Chrysler Corp.'s MoTech Automotive Education Center, Livonia, Mich. Murawa and Fodale are among 10 new engineers who recently entered the reactivated Chrysler Institute of Engineering program. This fall, they began their work-study program leading to a master of science degree. The Institute of Engineering was temporarily suspended in 1980 while the corporation struggled to regain its financial balance.

Domestic total up 6 pct. in mid-September

Chrysler, Ford pace sales gain

Led by strong showings from Chrysler Corp. and Ford Motor Co., domestic new-car sales during the second 10-day period of September increased 6.57 percent from the equivalent 1982 period.

Dealers reported 164,776 sales for Sept. 11-20, up from the 154,617 sold during the comparable 1982 period and the highest tally for mid-September since 1979 sales of 228,100 cars.

Year-to-date, the domestic makers through Sept. 20 sold 4,739,887 cars, up 17.43 percent from the 4,036,183 delivered during Jan. 1-Sept. 20, 1982.

There were eight selling days during both the 1983 and 1982 periods. Dealers sold 20,597 cars per day from Sept. 11-20, 1983, compared with 19,327 during mid-September, 1982.

All auto makers except General Motors posted gains during mid-September. Chrysler sales of 21,431 cars represented a 35.55-percent boost from the 15,810 sold during the year-ago period. Ford sold 41,920, up 27.49-percent from 32,881 in 1982.

The Ford and Chrysler gains came at GM's expense. GM sales of 92,639 were down 8.81 percent from the 101,593 deliveries of the equivalent 1982 period. Likewise, GM's market share plunged — down 9.49 percentage points — from 65.71 percent in '82 to 56.22 percent in '83.

GM blamed the losses on current low inventories and strong pre-introduction sales during mid-September, 1982, when inventories were still high and dealer incentives were in place.

Ford grabbed a 25.44-percent share of the mid-September market, a 4.17-percent boost from the 21.27-percent it held during mid-September, 1982. Chrysler penetration topped 13 percent, up 2.79 points from 10.22 percent last year.

Estimated sales of American Motors products increased 100 percent during the period. Volkswagen of America sold 2,312 domestic models, up 13.72 percent from the 2,033 sold last year. Both AMC and VW posted penetration gains.

At Chrysler, the Chryler line posted the largest sales increase. Sales of 7,341 vehicles represented a 50.15-percent increase over the 4,889 of 1982. Dodge was a close second, recording a 48.96-percent hike on sales of 8,126 cars.

Mercury showed the biggest percentage gain at Ford. Its 11,675 deliveries for Sept. 11-20 netted a 47.46-percent increase over 7,917 sales during 1982. Ford and Lincoln posted 22.28-percent and 12.69-percent sales gains, respectively.

Buick, Chevrolet and Pontiac reported losses during the period, while Oldsmobile and Pontiac posted gains. On a percentage basis, the biggest loser was Buick: 18,885 sales, down 20.40 percent from 23,725 during 1982. Cadillac recorded the largest percentage gain: 7,874 sales, up 26.75 percent from 6,212.

Dual 25-year awards for O'Brien

Joseph O'Brien, center, president of J. D. O'Brien Olds-Cadillac, Inc., Streator, Ill., received 25-year awards from Cadillac Chicago zone manager Carver Hendrix, left, and Oldsmobile Chicago zone manager Robert Holzworth.

Chrysler boosts discounts; '84 price hike averages $191

Continued from Page 1

16.5 percent, up from 15 percent for '83.

3. The Dodge 600 two-door sedan and convertible have a discount of 16.5 percent. Those models were in the Dodge 400 line for '83 and had a discount of 15 percent. The Dodge 400 name has been dropped.

4. The Plymouth Gran Fury and Dodge Diplomat four-door sedans have a dealer discount of 15 percent, up from 13 percent for '83.

5. On the Dodge 600 and 600-ES four-door sedans, the discount has been cut to 16.5 percent from 18 percent for '83.

Ford Motor Co. also revised some discounts for '84. The changes, some up and some down, affected Ford Escort, EXP and Mustang and Mercury Lynx and Capri (AUTOMOTIVE NEWS, Sept. 19).

• Chrysler's $191 price hike for '84 consists of $148 on the cars and $43 on optional equipment.

The increase was computed on the "comparably equipped" basis, which is the most advantageous method for the manufacturer. In that exercise, the '83 prices are adjusted for equipment additions or deletions before comparing them with '84 prices. General Motors and Ford Motor Co. used the same system.

Chrysler's $191 boost is lower than GM's $232 and Ford's $254. Chrysler does not have as many big cars in its lineup as do its rivals, and big cars have been given the biggest bumps for '84.

Another factor tempers Chrysler's advantage. Chrysler increased destination charges an average of $28 per car, while GM and Ford made no change in those fees.

Destination charges are not included in the Manufacturer's Suggested Retail Price, but they are an important part of the cost to the dealer and the price to the customer.

Destination charges at Chrysler now range from $308 to $475 on domestic cars.

Chrysler's lowest-priced home-built cars, the base Omni/Horizon four-door hatchbacks, have been reduced for '84 despite the addition of steel-belted radial tires and upgraded cloth/vinyl interior trim. The price is $5,380, down $11 from the unadjusted '83 tag of $5,841.

On the sporty side, Plymouth Turismo 2.2 and Dodge Charger 2.2 are $7,288, a cut of $15.

Chrysler is offering an "Automatic Transmission Package" on all Omni/Horizon models and on the base Turismo and Charger. Automatic transmission is free when the buyer orders the 2.2-liter engine, power steering, electronic stereo radio, console, center armrest, rallye wheels and dual remote-control side mirrors.

Base four-door sedans in the Reliant/Aries lines went up $231 and are now $6,949.

The Dodge 600 convertible received one of the bigger increases in the Chrysler fleet. At $10,595, it's up $600. The ragtop started the '83 model year at $12,500 and was cut to $9,995 last January.

The Dodge 600-ES four-door sedan rose only $63 for '84 and now is $9,535. The Chrysler E Class four-door sedan jumped $124 to $9,565.

Plymouth Gran Fury and Dodge Diplomat four-door sedans were increased $932. The '84 sticker is $9,180.

In the above examples, the increases are based on a straight comparison of '84 and '83 prices without adjusting for equipment changes.

Tighter controls take effect in '85 model year

GM loses California diesel petition

EL MONTE, Calif. — The California Air Resources Board has turned down a petition from General Motors to postpone tighter controls over soot-like particles from diesel passenger cars scheduled to go into effect with the 1985 model year.

However, the board did agree to reconsider at a future hearing whether light trucks with diesel engines will be capable of meeting the standards after the 1985 model year.

The action, taken during a public hearing, was the second time in recent months that the CARB has rebuffed diesel manufacturers' requests for more lenient anti-smog standards.

In its petition, GM claimed it needed more time to develop technology to trap the soot-like particles and, without it, some of its largest passenger cars and light trucks with a 350-CID engine could not meet the 0.4-gram-per-mile standard.

In denying the petition, the CARB noted that at least a dozen diesel powered production cars already are meeting the standard a year ahead of time, including some smaller-engine models produced by GM. They also include passenger cars and light trucks with small engines produced by Isuzu, Toyo Kogyo, Volkswagen and Mitsubishi.

• It also was disclosed during the hearing that Mercedes-Benz, which has a product line similar to GM's with heavy passenger cars with large engines, is experimenting with soot-trapping technology and intends to have it installed on cars in time to meet the stricter standards.

The technology, which may be required on big cars with large engines, traps the soot-like particles before they are emitted from the tailpipe. To prevent clogging, the trap periodically burns off the accumulated particulate.

The CARB adopted emission standard for soot-like particles in 1977 after research showed many of them were potentially cancer causing. They also are the optimum size for scattering light and, therefore, can dramatically cut visability in urban areas of the state.

Most current diesel models emit about 0.6 gram per mile of the soot-like material, about 50 to 100 times greater than similar emissions from gas-powered cars. Standards adopted by the CARB will lower those levels to 0.4 gpm in 1985, 0.2 gpm for 1986 through 1988, and 0.08 gpm for 1989 and later.

When the standards were adopted, diesel sales were predicted to be as high as 25 percent of all new car sales. However, price increases in diesel fuel have cut into sales predictions and only about 60,000 diesel-powered passenger cars are expected to be sold in California during 1984.

Last June, during a public hearing in San Diego, the CARB denied requests of a few diesel makers, including GM, to postpone an emission standard for smog-causing nitrogen oxides.

At the time, the board noted that 18 of 21 diesel models already met the standard and an exception for the few who could not meet it was not justified.

Audis recalled for brake pads

TROY, Mich. — Porsche Audi Division of Volkswagen of America is recalling 1978 through 1983 Audi 5000 vehicles equipped with automatic transmissions for installation of a thicker pedal pad which raises the height of the brake pedal.

The safety recall affects 117,000 vehicles and is in response to reports that drivers inadvertently have stepped on both gas and brake pedals when they intended to operate the brakes.

The company said that some vehicles have brake pedals that are not high enough, and a driver could step on both pedals at once and possibly lose control of the vehicle.

GM-Toyota moving ahead while awaiting FTC approval

By Marjorie Sorge
Labor Editor

General Motors and Toyota Motor Co. are putting the final touches on their joint venture despite the lack of FTC approval.

The companies are moving ahead with the building of a stamping plant next to the idle GM Fremont assembly facility which will build the new front-wheel-drive small car.

GM and Toyota broke ground for the stamping operation on Feb. 17. According to a GM spokesman, the construction of that plant is moving along on schedule and has not been held up to await the FTC's approval of the joint venture.

The spokesman also said the two parties are moving ahead on engineering plans and other specifics of the vehicle. If approved, the joint-venture company will start building the small cars in 1985.

According to some sources, an FTC decision could come in October. Many believe that the recent labor agreement with the UAW has made both Toyota and GM more confident of FTC approval.

The project is a 12-year agreement between the two companies to produce 200,000 subcompact cars annually for Chevrolet. The cost has been set at about $300 million, split equally between the companies.

The letter of intent signed last month by GM-Toyota and the UAW guarantees UAW-represented workers laid off from the Fremont plant a majority of the jobs available when that operation reopens under the joint venture. There are about 4,200 workers presumed available for the 2,500 jobs.

GM names Cockerham to personnel position

DETROIT. — Haven E. Cockerham, 36, has been appointed personnel director for General Motors' Central Office. He has been personnel director of the Fisher Body Division plant in McKeesport, Pa., since 1982 and has been with GM since 1969.

Cockerham succeeds Marvin L. Recht, who was appointed director of personnel and public relations for GM's Allison Gas Turbine Operations in Indianapolis.

Auto production climbs to 160,961

Week's output up 76 pct. over '82

By Mary Beth Mayer
Staff Writer

Overtime at 14 plants pushed production of cars last week to its highest point in more than two years.

The domestic auto makers targeted last week's output at 160,961 units, 5.05 percent above 153,234 cars completed the previous week, and a huge 76.82 percent over 91,036 units finished in the year-ago period.

The week's total was the highest since the 162,485 tallied in the week ended May 23, 1981.

Breakdown for the week by company was: General Motors, 57.85 percent; Ford Motor Co., 23.11 percent; Chrysler Corp., 14.16 percent, American Motors, 2.80 percent; Volkswagen of America, 1.46 percent, and Honda, 0.62 percent.

GM had five factories working two shifts Saturday (Oct. 1). Working extra hours were: Detroit; Janesville (Wis.); Lansing, B, D and G lines; Lordstown (O.), and Oklahoma.

Working daily extra hours for Ford last week were Chicago, Lorain (O.) and St. Louis; putting in both extra daily hours and Saturday overtime were Edison (N. J.), Kansas City and Wayne (Mich.).

Chrysler Belvidere (Ill.) and Newark (N. J.) points operated two daily 9-hour shifts last week and the Jefferson (Detroit) plant put in two daily 8½-hour shifts.

Chrysler has scheduled daily and Saturday overtime this week at its Belvidere, Newark and Jefferson points.

This week, three Ford facilities will be working daily and Saturday overtime and three Ford factories will be working extra daily hours. Scheduled to be up on Saturday, as well as putting in additional weekday hours are: Edison, Kansas City and St. Louis. Slated for extra daily hours are: Chicago, Lorain and Wayne.

Change expected at Lotus; Wickins may head company

Continued from Page 3

tial equity base, possibly for the first time ever."

The Lotus board has been increased from four to six. BCA's Wickins and Kiyoshi Matsumoto, a senior Toyota managing director, have joined Chairman Bushell, Managing Director Mike Kimberley, Alan Curtis and Peter Kirwin-Taylor.

It is believed that the sheer size of BCAs' holding in Lotus will inevitably lead Wickins to replace Bushell as chairman.

Similarly, the combination of Toyota's large shareholding and its established and large distribution network in the U. S. could lead to Toyota's taking control of M-90 sales in that country.

The M-90 will use key Toyota components, including a 16-valve four-cylinder engine and five-speed manual gearbox. It will be a front engine/rear drive car in coupe and drophead body styles.

Lotus talks of building a record 5,000 a year, in addition to its more exotic Esprit and Eclat models. The main market will be the U. S.

Kimberley says talk of the U. S. distribution is premature gossip.

"It's an area that we've not determined," he said. "We're still trying to get M-90 off the deck, and the full board has not yet given its approval for the project. The whole project has to be discussed in detail — not just the marketing.

"Analytical teams from our new BCA and Toyota partners are studying the project," Bushell said.

Assuming the new board gives approval within the next few weeks, it will still be 27 months before the car goes on sale. Thus it seems unlikely the new car will appear before the spring of 1986.

It's 75th Anniversary for Model T Ford

DEARBORN, — The Ford Model T first chugged into history 75 years ago on Oct. 1, 1908.

The first year's production reached 10,660 units, breaking all industry records. Seventy years ago this month (Oct. 7, 1913), Ford Motor Co. began assembling the chassis for the Model T on a moving assembly line. By 1914, completed Model Ts were popping out of the door of Ford's Highland Park (Mich.) plant every 40 seconds. Model T production totaled 15,458,781.

Car output tops 19,000 in Canada; trucks are steady

Canadian auto production last week was the highest it has been in 14 weeks.

Last week's estimated output was 19,019; up 4.80 percent from the 18,149 assembled the previous week and 11.13 percent over the 17,115 built in the year-ago week.

During the week ended June 25, Canadian auto makers completed 22,048 units.

So far this year 715,159 cars have been assembled, up 7.21 percent from 667,106 completed in the year-ago period.

Canadian truck makers targeted last week's output at 12,305, 1.26 percent below the 12,462 built the week before, but 77.95 percent ahead of the 6,915 finished in the year-ago week.

Ford Motor Co.'s St. Thomas (Ont.) facility is scheduled to complete its final four weeks of tooling changes this week and reopen Oct. 10. It will add production of full-size Crown Victoria and Grand Marquis cars to the Escort/Lynx subcompact cars already built there.

Chrysler Corp.'s Windsor (Ont.) car facility has finished retooling for production of the Dodge Caravan, Mini Ram Van and Plymouth Voyager. Output of those new models is slated to begin this week.

Truck production shows gain with 53,446 for week

Overtime schedules at 10 assembly points put last week's estimated truck production at 53,446 units, which was 1.02 percent more than the 52,908 completed the previous week when eight plants worked extra hours.

Last week's total was up 55.54 percent from 34,362 trucks assembled in the year-ago week.

Saturday (Oct. 1) overtime was scheduled at General Motors' Detroit, Flint, Janesville (Wis.) and Lordstown (O.) points. Detroit and Flint worked one extra shift, while Janesville and Lordstown worked two extra shifts.

Ford Motor Co.'s Kansas City, Lorain (O.), Louisville, Norfolk, Wayne (Mich.) and Twin Cities (Minn.) facilities worked daily overtime last week. Lorain also worked Saturday.

This week, Ford plans daily and Saturday overtime at six facilities — Kansas City, Lorain, Louisville, Norfolk, Wayne and Twin Cities.

Chrysler Corp. has scheduled its Warren plant to start a second shift next week, and 1,300 persons will be called back to work.

Other makers follow GM with programs to hype sales

By Joseph Bohn
Marketing Editor

Product availability may be tight, sales are up briskly—but Detroit's auto makers aren't taking any chances.

After General Motors launched a 12.9 percent APR finance program, Ford, Chrysler and American Motors jumped in quickly with programs of their own.

Ford and AMC essentially matched GM, but Ford added extra cash incentives for sales managers and salespeople. Chrysler didn't follow GM on APR, but offered truck rebates.

Generally, except for Chrysler's rebates, none of these APR and incentive programs are being publicized. And they're of one-month duration only, underscoring a wait-and-see attitude.

Although product shortages are widespread, Detroit has some very large production increases planned for the fourth quarter. And auto makers want to make sure they don't end up sitting on a lot of inventory.

At any rate, Ford jumped on GM's bandwagon by offering 12.9 financing through Ford Motor Credit on most cars and some trucks for Oct. 1-31.

Its APR program covers new '83/'84 vehicles with the exception of Crown Victoria, Mustang, Grand Marquis, Capri, Continental, Town Car, Mark VI/Mark VII, Club Wagon and vans.

• Contracts run from 12 to 48 months. Dealers are free to use the financing or not. They contribute toward it by earning a lower finance reserve — 0.714 percent on non-recourse contracts and 1.614 percent on repurchase contracts.

Ford Division has a separate dealer cash incentive on '83 Mustangs. Dealers can earn $500 per unit sold on regular models and $700 on convertibles.

In five Western states, they earn an extra $200, i.e., $700 on regular Mustangs and $900 on convertibles.

At Ford Division, there's also a Sept. 30-Oct. 31 salespersons' contest. Salespersons can earn $75 for the sale of each '83 or '84 Escort, Thunderbird or Ranger, '84 Tempo or '83/'84 F-150 2WD/4WD equipped with a manual transmission.

Within the program, sales managers earn $25 extra for each eligible unit the salesperson is paid on. If the dealer-

Stock of new cars holds at 55 days; unit count rises

By Richard A. Wright
Assistant Managing Editor

The domestic new-car inventory increased by more than 100,000 units during September, but it continued at a healthy 55-day supply Oct. 1, unchanged from a month earlier.

Production increases during September were matched by higher sales, keeping the supply level constant while the unit count grew to 1,195,755 Oct. 1, compared with 1,090,345 a month earlier.

The industry stockpile was in much healthier condition than it was a year earlier, when there were 1,350,393 new-cars in stock, a 69-day supply.

All the corporate makers increased their new-car stocks during September, with General Motors accounting for the lion's share of the gain, although its days-supply figure jumped only from 52 to 54 days.

GM's inventory was lean in some J-car and standard lines, but was generally in quite good balance.

• Ford Motor Co. opened October with a 58-day supply, down from 63 days a month earlier. Ford was also short of big cars, with Lincoln the leanest in its lineup.

Chrysler Corp. also had a 58-day supply Oct. 1, up slightly from a 57-day stockpile a month earlier. Chrysler followed the pattern of lean big-car stocks, with Fifth Avenue its shortest in supply.

American Motors managed to

Table on Page 6

build its inventory to a 73-day supply Oct. 1. The bulk of its stockpile were Renault models and Spirit and Concord units were just about gone.

Volkswagen of America had an 82-day supply Oct. 1, up from 55 days a month earlier, and Honda had a slim 12-day stock of U. S.-built Accords, down a bit from 13 a month earlier. .

The Oct. 1 domestic new-car inventory was divided this way: GM, 56.31 percent; Ford Motor Co., 26.11 percent; Chrysler Corp., 12.52 percent; AMC, 3.43 percent; VWoA, 1.34 percent, and Honda, 0.29 percent.

A month earlier, the domestic new-car inventory was divided this way: GM, 56.42 percent; Ford Motor Co., 26.11 percent; Chrysler Corp., 12.60 percent; AMC, 3.20 percent; VWoA, 1.42 percent, and Honda, 0.25 percent.

By market segment, the inventory balance was little

His ads now point out 3-pct. holdback

$49-over dealer angers rivals anew

By Richard A. Wright
Assistant Managing Editor

John Peterson Motors, Lake City (Minn.) full-line General Motors dealer whose $59-over-invoice sales system has touched off a wave of controversy felt all the way to Detroit, is adding a few more ripples.

Fellow dealers, irked by his newspaper ads trumpeting new cars for $49 over dealer invoice, complained to the Minnesota attorney general, who agreed the ads were questionable, Peterson said.

Quick to comply with the attorney general's recommendations, Peterson has managed to irritate his colleagues even more.

Peterson said the attorney general's office agreed with complaints of other dealers that the ads were misleading because they gave the impression that all Peterson was making on the cars was $49 profit.

This is not true, because the 3 percent holdback is included in the invoice and is paid to the dealer, giving him additional profit. The attorney general, Peterson said, suggested a line be added in the ads stating that the price includes a 3 percent holdback which is paid by GM to Peterson.

Peterson said he drew up an ad with big block letters which stated that the invoice price included "a 3 percent holdback which is paid by GM to all of its dealers."

• Peterson said that GM dealers in Minneapolis-St. Paul met recently with a GM corporate official to discuss Peterson and his $49-over marketing system.

A source said the GM representative told the dealers that legally there was nothing it could do as long as Peterson broke no laws and did not violate the franchise agreement. The source declined to identify the GM representative.

Peterson's marketing approach

BMW picks new chiefs of R&D and sales

MUNICH.—The composition of BMW's board of management for the late '80s has been decided. It includes new directors of research and development and sales. Hans Hagen will take the R&D post from Nov. 1, following the unexpected resignation earlier this year of Karlheinz Radermacher. Eberhard von Koerber will replace Hans-Erdmann Schoenbeck at sales when he retires toward the end of next year. Hagen is director general of MAN, the heavy truck specialists, and von Koerber is managing director of BMW South Africa.

Two Miami dealers accused of warranty fraud

Hondas from Guam lead to $60-million lawsuit

By Kathleen Hamilton
Financial Editor

Two big Miami Honda dealerships have been named in a $60 million class-action lawsuit that charges them with warranty fraud for selling Hondas imported from Guam.

By bringing the hot-selling Accords from the U. S. territory, the cars aren't counted under the voluntary auto export quotas set by the Japanese.

The suit charges that about 2,000 Hondas have been imported from Guam by the two dealerships. One of the dealers named in the suit, who agreed to talk to Automotive News, said the number was probably half that. And he defended his actions as both legal and ethical.

These weren't the first Hondas imported in a fashion designed to circumvent the quotas, said Cliff Schmillen, senior vice president of American Honda Motor Co.

American Honda knows of others that have been imported from Europe and the Pacific area, Schmillen said. He said American Honda has no way of knowing how many were brought in. But those may never have reached the public because their importers had to post bonds and make extensive modifications to the cars so they would meet NHTSA and U. S. emissions standards.

Cars from Guam already meet those standards. They are identical to those destined for the U. S. market.

From a consumer's standpoint, the Hondas from Guam have only two problems: Recall notification would not be sent to owners because American Honda has no record of those sales, and there are warranty hassles.

Ron Esserman, dealer at

Model-year sales up 16.8 pct.; September rise is 7th in row

By Jenny L. King
Staff Writer

Domestic new-car sales were up in September for the seventh consecutive month this calendar year, bringing the 1983 model year to a close with an impressive 16.82-percent sales gain over 1982.

Imports claimed 23.59 percent of September's total market this year, down from 27.21 percent in 1982. Imports also dropped in penetration for the model year, dipping to 26.55 percent from 28.02 percent in the 1982 season.

Sales of domestic cars reached 6,475,150 in the 1983 model year, up 16.82 percent from 5,543,006. Two years ago the total was 6,590,451.

Import sales in the recent model year added to 2,340,878, up 8.48 percent from 2,157,890. Industry total for the model year was up 14.48 percent, to 8,816,028 from 7,700,896.

September domestic sales of 538,307 showed a 10.21-percent improvement over the year-ago 488,452. Imports slipped an even 9.00 percent during the ninth month, dropping to 166,163 from 182,599. Industry sales adjusted themselves by a plus 4.98 percent, to 704,470 from 671,051.

Third-quarter domestic sales improved 23.98 percent, going to 1,646,131 from 1,327,771 in 1982. Imports were more subdued: Their sales were up just 1.45 percent, to 589,722 from 581,304 for the July through September quarter.

• Buick reported a model-year sales record for 1983, breaking its former high set a decade ago. Buick was the only make to lay claim to such a record. Its sales totaled 810,435.

Oldsmobile listed 12 consecutive months of sales gains. Cadillac reported 13 straight months of improved sales and a model-year gain of 22.40 percent.

On the 1983 model year sales chart, only Imperial, AMC and Volkswagen failed to match or surpass 1982 model-year sales. Imperial, now discontinued, was down 38.62 percent, American Motors' domestic AMC products were off 40.88 percent and VW's U. S. Rabbit missed by 22.58 percent.

At Chrysler Corp., Plymouth sales for the model year were up 3.78 percent, Chrysler was up 84.00 percent and Dodge moved up 23.43 percent over its 1982 level.

Ford Division gained 12.16 percent, Mercury was up 18.66 percent and Lincoln moved ahead by 28.99 percent in the 1983 model year.

Buick was up 16.65 percent, Cadillac was up 22.40 percent, Chevrolet was up 5.83 percent, Oldsmobile was up 25.86 percent and Pontiac was up 11.13 percent.

Renault's Alliance, on the market less than one month in the 1982 model year, was up to 128,338 units for 1983 from 6,837 units. Honda, with 32,398 Accords to its 1983 model-year credit, had no year-earlier comparison figures.

In the 1983 model year, General Motors dealers sold 3,876,006 new passenger cars, up 14.42 percent from 3,387,607 a year earlier. Ford Motor Co.

Ford Motor Co. had a preview of the new Continental Mark VII for Washington newspeople. Ford Chairman Philip Caldwell, left, delivered a luncheon speech at the National Press Club. Henry Ford II, chairman of Ford's Finance Committee, joined Caldwell at the preview.

Chevette, 1000 may be slashed for '85; A-body output to rise

GM to reopen Lakewood for T-car

By Marjorie Sorge
Labor Editor

General Motors will make production switches at three of its assembly plants next year.

Last week, GM President F. James McDonald announced that the company will reopen its idle Lakewood (Ga.) assembly plant in early 1984 to build the Chevrolet Chevette and Pontiac 1000, the T-car.

That production will be moved from the Wilmington (Del.) facility. Wilmington will be converted to production of the full-size Chevrolet and Pontiac for the 1985 model year.

That full-size production will be transferred from GM's Oshawa (Ont.) plant which will continue to build the mid-sized A-cars for 1985.

GM said it is making the switch "to increase production of its mid-size cars for the 1985 model year." Those cars enjoyed increased sales in the '83 model year.

The A-cars are also produced at Doraville (Ga.), Framingham (Mass.) and Oklahoma City. The A-cars are Chevrolet Celebrity, Pontiac 6000, Buick Century and Oldsmobile Cutlass Ciera.

Besides increasing production of the A-cars, the switch brings about other questions.

Is GM cutting down production of its smallest cars, the Chevette and 1000, for the 1985 model year? The announcement comes when the company is on the threshold of importing 80,000 to 100,000 small cars from Suzuki for the 1985 model year and is anticipating FTC approval of a joint venture with Toyota to build small cars at its idle Fremont (Calif.) assembly plant.

The GM/Toyota venture calls for the production of 200,000 small cars for the 1986 model year.

GM also has a deal with Isuzu to sell a new subcompact R-car beginning in the fall of 1984. GM expects to sell about 100,000 the first year.

GM will have three shifts building the T-cars until Wilmington goes down for conversion in May.

According to a GM spokesman, another shift could be added at Lakewood in the future depending on market conditions. However, if a second shift is not added, production of the smallest cars would be more than halved for the 1985 model year.

The Lakewood plant is scheduled to begin building 1984 models at a rate of 46 an hour on one shift. Wilmington currently builds 63 an hour on two shifts.

Sales of the Chevette and 1000 have fallen substantially in the last year. For the first nine months of 1983, Pontiac sold 25,682 of the 1000 models, off 32.7 percent from 38,154 in the same 1982 period. Chevette sales for that period dropped 26 percent from 174,708 to 129,350.

Another question: Is GM scrambling to continue to build its rear-wheel-drive big cars which it reportedly had planned to phase out?

Sales of the RWD big cars have improved 31.3 percent for the first nine months of 1983 to 589,613, up from 449,168 for the same period in 1982.

• The production rate at Wilmington for the full-size cars will depend on market conditions, a spokesman said. Those cars are also built at Fairfax, Kans., at a rate of 60 an hour on two shifts.

Oshawa also currently builds the Chevrolet Celebrity and Pontiac 6000 at a rate of 52 an hour on two shifts. In early 1983, it was announced that plant would begin building the Oldsmobile Cutlass Ciera but that was deferred in July because of market demand. Oshawa will continue to build the two A-cars it curently produces and will have either the Oldsmobile Cutlass Ciera or the Buick Century or both added to its lineup for 1985, a GM spokesman said.

Oshawa will go down in late spring for conversion.

The resumption of work at Lakewood, which has been idle since September, 1982, will return 1,650 laid-off workers to the job. GM has also added second shifts to its Leeds (Mo.) and Framingham (Mass.) assembly plants. Leeds builds the Buick Skyhawk and Oldsmobile Firenza. Framingham produces the Celebrity and Cutlass Ciera.

According to GM Chairman Roger B. Smith, those additions, plus Lakewood, will bring back about 24,000 workers. The company has called back about 66,000 workers since Jan. 1.

Merger plan involves NHTSA, truck bureau

WASHINGTON.—A new National Traffic Safety Administration proposed by the Reagan Administration would not be "a mere shuffling of the boxes on some federal organization chart," Transportation Secretary Elizabeth Dole said last week.

Announcing the planned safety agency shakeup to the American Automobile Assn.'s annual meeting here, Dole said the new agency would merge NHTSA with the Bureau of Motor Carrier Safety, as well as certain functions of the Federal Highway Administration.

This combination would "elevate safety to a level consistent with its importance," she said.

The existing NHTSA and the Bureau of Motor Carrier Safety have both encountered a good deal of criticism of late.

NHTSA has been criticized for its handling of the air-bag and bumper standards and its investigations of certain car safety defects. The Bureau of Motor Carrier Safety has been slapped for its handling of truck safety questions involving twin-trailers and expanded body widths.

"The consolidation we are recommending will require legislation, which is being transmitted to the Congress," Dole said.

She also confirmed that the Department of Transportation is moving ahead on rulemaking to require high-mounted stoplamps and proceeding with work on the anti-lacerative windshield standard.

Mondial Cabriolet Quattrovalvole unveiled

Ferrari's Mondial Cabriolet Quattrovalvole was unveiled during the annual meeting of Ferrari dealers of North America in New York. The car is the first full convertible produced by Ferrari since the 1969 Daytona Spider.

DeLorean trial now scheduled to begin Nov. 1

LOS ANGELES. — Trial of the drug-trafficking case involving John Z. DeLorean has been rescheduled to Nov. 1 in U. S. District Court here.

A ruling in the Ninth Circuit Court of Appeals in San Francisco recently reversed a ruling by Judge Robert M. Tagasuki granting 51 defense requests for information from various government agencies under the Freedom of Information Act.

The appellate court, in reversing the decision, cleared the way for the trial to start before the end of the year.

DeLorean's attorneys have also lost a bid to remove the chief prosecutor on the case, James P. Walsh Jr.

A pretrial hearing is scheduled for Oct. 21 to consider admissability of polygraph tests taken recently by DeLorean.

High seniority, cooperative work ethic also help

New programs slash absenteeism

By Marjorie Sorge
Labor Editor

Hourly workers at the Big Four U. S. auto makers are spending more time on the job these days. Absenteeism rates have dropped in the last year.

The drops at Chrysler Corp., Ford Motor Co., General Motors and American Motors can be attributed in part to the high seniority of the workforce, the cooperative work ethic and, at some companies, a new absenteeism program which cuts worker benefits for the chronically absent.

While all four companies have shown a reduction in absenteeism, they cannot be compared with each other since each company figures its rate on a different basis.

During the last two or three years, the U. S. makers have been forced into heavy layoffs because of sagging sales, leaving basically high-seniority workers on the job. According to some observers, these workers are often more responsible than the younger workers.

It is possible that absenteeism will increase during the recovery but the increase will be basically from the mathematical changes developed by adding more people, according to a Ford spokesman.

Although there is a recovery, it is unlikely that many new workers will be hired since those on layoff would be tapped first for jobs. These laid-off workers are now well aware of the problems of job loss and will likely make a great effort to be on the job, company spokesmen said.

• The increase in the cooperative work ethic at the auto companies is also playing a big role in absenteeism cuts. Workers now want to be at work to get their input into projects, the company said.

Under the new cooperative method, workers are asked for their opinions on the best way to run plants, lines or projects.

New absenteeism programs have been developed at Chrysler and GM. At GM, workers who miss 20 percent of the scheduled work in six months are penalized 20 percent of their general benefits for the following six months.

While 20 percent is the trigger, workers who miss more time than that will have their benefits cut accordingly. The program does not affect workers who are off because of a major illness or other unforeseen circumstances.

The program went into effect at GM in April of this year. At that time, about 10,000 hourly workers were penalized.

According to James E. Pryce, assistant director of arbitration and contract administration, GM labor relations, this new benefit reduction program has cut absenteeism but, he said, joint company/union employe counseling has also been a big boon in reducing the number of AWOL workers.

Other factors include improved sickness and accident administration at the plant level, local plant absenteeism programs, the GM Quality of Worklife programs and the state of the economy, he said.

At Chrysler, the program went into effect for production and maintenance workers in February, 1983, and for parts depot employes in April. That program does not penalize the AWOL workers but is aimed toward progressive self correction through counseling, a Chrysler spokesman said.

According to Charles Dussey, manager research and planning, Chrysler industrial relations, absenteeism at Chrysler is also down because many of the workers have been laid off during the past three years due to the company's financial crunch. He said those workers have had a "long dry spell; they can use the money and don't feel they can take the time off."

For these reasons, absenteeism rates have dropped substantially for the U. S. makers during the past few years.

• At GM the rate has dropped from 3.9 percent in 1981 to 3.2 percent in both 1982 and the first half of 1983 for short-term unexcused absences.

According to Pryce, the short-term absences are a significant operating problem and the new absenteeism program is geared to cut down on the number of workers who take off one or two days here and there. Short-term absences are from one to five days.

Long-term absences are more expensive to the company, he said, but do not cause as significant a problem in operations. GM's long-term absenteeism rate was 7.1 percent in 1982 and 5.8 percent in the first half of 1983.

Ford's short-term AWOL rate has dropped from 4.3 percent in 1981 to 3.7 percent in 1982 and to 3.4 percent in the first half of 1983.

Chrysler's rate is down from 5.6 percent in 1981, to 4.8 percent in 1982 and 4.4 percent in the first seven months of 1983.

AMC's rate has dropped from 5.0 percent in 1981 to 3.7 percent in 1982 and 3.2 percent for the first half of this year. AMC's rate is based only on its Kenosha operations.

BIG THREE ABSENTEEISM PERCENTAGES

	1973	1974	1975	1976	1977	1978	1979	1980	1981	1982	1983
Chrysler	8.1	7.7	6.8	7.4	8.0	7.8	7.4	6.0	5.6	4.8	4.4**
Ford	5.7	5.5	5.1	5.0	6.0	5.9	5.8	4.8	4.3	3.7	3.4***
General Motors*	6.4	6.4	6.0	6.4	7.9	9.8	5.7	4.2	3.9	3.2	3.2***
American Motors									5.0	3.7	3.2***

*—General Motors absenteeism rates for 1977 and 1978 reflect contractual absences.
**—Through July.
***—Through June.
Comparisons among the companies are not valid since each uses a different method of computing absenteeism.
Volkswagen of America would not release its absenteeism figures.

Millionth K-car delivered

Mr. and Mrs. Donald W. Scott purchased the one-millionth K-car built by Chrysler Corp. It was a 1983 Plymouth Reliant four-door sedan. Presenting the keys is Jack Ellis, of Jack Ellis Chrysler-Plymouth, Glendale, Calif. At right is Clark J. Vitulli, Chrysler's Los Angeles zone sales manager. Dealership employes applauded the event.

Chrysler Financial renews $4.2 billion line of credit

DETROIT. — Chrysler Financial Corp. last week arranged a $4.2 billion line of credit it says will be sufficient to meet its needs through September, 1986.

The 349 lenders are basically the same ones already extending credit to the captive finance company, according to Chrysler Financial President E. O. Grote.

The renewal of the credit facilities was necessary because some of the debt was due to mature in December. Through 1984, $3.6 billion worth of debt was due to mature.

Chrysler Financial's financing volume will exceed $10 billion this year, compared with $8.14 billion last year, Chrysler Vice Chairman Gerald Greenwald said in announcing the new credit agreement.

It will finance more than 1.2 million vehicles this year compared with 960,000 last year.

"These new agreements are evidence of the strengthened confidence in Chrysler Corp. throughout the financial community," Greenwald said. "They will provide Chrysler Financial with additional leverage, lower cost for our borrowings and added operating flexibility."

The credit agreements allow Chrysler Financial to increase its leverage, or percentage of indebtedness, in 1985 and 1986, Grote said. In addition, Chrysler Financial will be allowed to increase the sale of its receivables, he said.

Interest rates will be determined by the market at the actual time of borrowing. Chrysler Financial no doubt will benefit from Moody's recent upgrading of its bond rating.

The lenders include major banks, insurance companies and financial institutions on six continents, Chrysler said. Agents will be Manufacturers Hanover Trust Co., Swiss Bank Corp., The Royal Bank of Canada and Union de Banques Arabes et Francaises.

Fallon out as president of Bricklin's company

NEW YORK.—Gerard Fallon, president of International Automobile Importers, Malcolm Bricklin's company, is leaving his post to return to private law practice.

Bricklin told AUTOMOTIVE NEWS that Fallon would remain as a consultant to the company. Bricklin said there was no "falling out" between the two men and that this move was planned when Fallon was hired last April.

Ira Edelson, vice chairman of the board for finance has been appointed president of the company and will hold the dual post of chief operating officer and chief financial officer. The firm imports Bertone and Pininfarina automobiles in the U. S.

Fallon was appointed executive vice president of the company in late April and president in July. Bricklin said he was brought in from law practice to set up the organization for a period of six months to one year.

Bricklin said Fallon "did a fantastic job and put together a great organization." He said Fallon will have an ongoing role with the company as a consultant.

Before joining Bricklin, Fallon was a partner in the Washington-based law firm of Caldouhos and Brushares. He also was vice president and general counsel of Fiat Motors of North America.

Edelson joined IAI as vice chairman for finance in July. He is a former partner in the New York-based accounting firm of Goldstein, Golub, Kessler & Co.

Fallon was unavailable for comment.

FTC to survey attitudes on auto reliability

WASHINGTON. — A study of "auto expectations" has been initiated by the FTC's Bureau of Economics.

As described by FTC Chairman James C. Miller III: "This work is motivated by our product defects cases, which rely partly on plausible but untested assumptions about consumer knowledge of product reliability.

"Basically, the study seeks information on how consumers rate new automobiles for relative reliability. The results of this work should enable us to address problems of defects in automobiles—and perhaps other products—more efficiently and more effectively than otherwise."

NADA receives national award for AUTOCAP

NEW YORK. — The highest award given by the Society of Consumer Affairs Professionals in Business (SOCAP) was presented to NADA to honor its Automotive Consumer Action Program (AUTOCAP).

AUTOCAP is a nationally standardized consumer assistance program to mediate problems between franchised new-car and truck dealers and their customers.

Penelope Longbottom, NADA director of media and consumer affairs, accepted the award on behalf of the trade group. Also in attendance at the SOCAP awards banquet, and recognized by Longbottom as "the architect" of AUTOCAP, was Ford-Datsun-Peugeot dealer and NADA director of Connecticut, Richard Wagner. Wagner for years has headed NADA's Consumer Affairs Committee and was instrumental in the program becoming a major consumer initiative of NADA.

Accepting the award, Longbottom said that NADA was honored that its consumer assistance program had received such a prestigious award. "NADA, through its AUTOCAP program, is firmly committed to paving the way to a new era of cooperation and communication between franchised new-car dealers and their customers," she said.

Thirty-two state and 15 metropolitan dealer associations, collectively representing over 15,000 member car and truck dealers, now sponsor AUTOCAP. Last year, these programs mediated close to 6,000 consumer complaints.

Chrysler at odds with Teamsters

DETROIT. — Chrysler Corp. has hired a non-union trucking firm, TSI Minutemen, to service its Brownstown (Mich.) parts depot, angering members of Teamsters Local 614 who used to have the job. The new trucking firm operates 13 foreign-made vehicles in its 28-truck fleet.

A Chrysler spokesman said the company asked for bids on a contract to deliver parts from Brownstown to dealers in Indiana, Michigan and parts of Kentucky and Ohio and TSI's bid was the lowest of the four submitted.

SKY-TOP moonroof

Sky-Top Sunroofs, Ltd., St. Louis, is marketing a power moonroof to fit the 1984 Jeep Grand Wagoneer. The moonroof requires the addition of a vinyl roof.

Unit count climbs to 1.2 million

New-car stock holds at 55 days

Continued from Page 1

changed from a month earlier, except that compacts were a bit heavier and intermediates leaner.

The industry had a 65-day supply of subcompacts, a 59-day supply of compacts, a 56-day stock of intermediates, a 44-day supply of standards and a 51-day stock of luxury cars.

A month earlier, the days-supply figures by market segment were: Subcompact, 66; compact, 55; intermediate, 61; standard, 42, and luxury, 48.

Signing with Subaru

ESCONDIDO, Calif. — Ray Burns and Pat Pratarelli have signed a franchise agreement to open North County Subaru here.

The Oct. 1 domestic inventory was divided this way among market segments: Subcompact, 18.61 percent; compact, 22.68 percent; intermediate, 38.52 percent; standard, 9.37 percent, and luxury, 10.84 percent.

A month earlier, the inventory was divided as follows: Subcompact, 17.15 percent; compact, 22.35 percent; intermediate, 40.13 percent; standard 9.68 percent, and luxury, 10.69 percent.

• The Oct. 1 days-supply figures by market class were:

Subcompact — Accord, 12; Fiero, 50; EXP, 50; Turismo, 59; Escort, 60; Pontiac 1000, 66; Horizon, 68; Omni, 68; Charger, 69; Encore, 71; Chevette, 73; Alliance, 77; Lynx, 82; Rabbit, 82; Daytona, 120, and Laser, 126.

Compact — 2000 Sunbird, 45; Cavalier, 46½; Dodge 400, 53; Aries, 55; Skyhawk, 55; Reliant, 56; Camaro, 59; LeBaron, 59; Firebird, 60; Eagle, 63; Tempo, 64; Firenza, 64; Topaz, 65; Mustang, 77, and Cimarron, 98.

Intermediate — Malibu, 25; Cutlass, 41; Pontiac 6000, 42; Chrysler E Class, 43; Celebrity, 49; LTD, 51; Monte Carlo, 52; Bonneville, 52; Cougar, 56; Cutlass Ciera, 56; Grand Prix, 57; Regal, 59; Century, 60; New Yorker E, 60; Marquis, 62; Dodge 600, 64½; Omega, 68; Skylark, 72; Thunderbird, 76; Citation, 98, and Phoenix, 98.

Standard — Gran Fury, 29; Olds 88, 30; Cordoba, 33; Grand Marquis, 36; Crown Victoria, 39; LeSabre, 50; Chevrolet, 56; Diplomat, 61, and Parisienne, 62.

Luxury — Corvette, 28; Lincoln, 36; Olds 98, 39; Cadillac, 41; Mark VII, 51; Seville, 55; Eldorado, 56; Fifth Avenue, 60; Toronado, 62; Continental, 63; Electra, 66, and Riviera, 68.

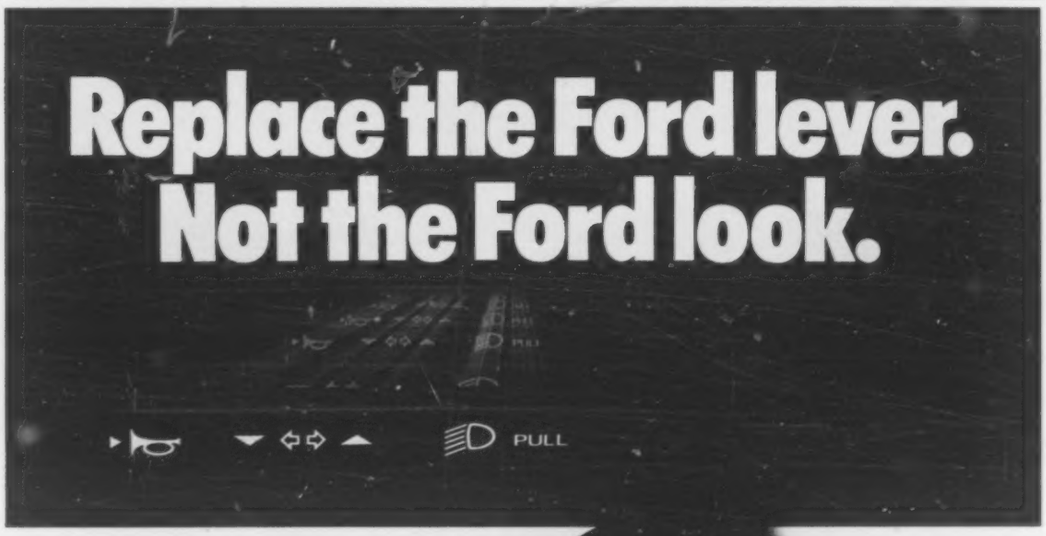
Replace the Ford lever. Not the Ford look.



Dana allows you to replace the Ford lever without replacing the Ford look. You can add technologically advanced cruise control units to any car in the Ford line, including Tempo and Topaz, without disturbing the OE look new car buyers expect.

You'll also have performance that's reliable even on the smaller engine cars. Electronic improvements allow the elimination of some parts, like the brake disengagement switch, to permit quicker, easier, more accurate installation.

Now Ford dealers have cruise control that works right and looks right. Made by Dana's Precision Controls Division, Hwy. 74 By-Pass East, Laurinburg, NC 28352, (919) 276-4853.

New lever for Tempo, Topaz, Lynx, and Escort also available

DANA

Ford of Britain thrives, but wants more

Toy counts 30.5 pct. share on cars, 36.4 pct. on trucks

Continued from Page 39

and so on, which are small volume. As far as the big-volume stuff is concerned, forget it.

"North America is not now really an attractive British motor industry market, in my view.

"So you're really back to Continental Europe. And sure as hell the motor industry has enough assembly plants in France, Italy, Germany and so on to take care of local requirements," argues Toy.

And while Ford's exports of components and commercial vehicles earned good money last year, they were exceeded by the value of imported cars.

Toy lists making the UK factories more efficient as his main concern, "so that we can make ourselves, with our British production, more competitive with the rest of the world. And that's not just the Ford world, obviously," he comments.

• He rejects vehemently suggestions that the discount and promotional war to win customers is having serious effects on company and dealer margins. He frequently returns to the word "viable" in this context.

"There are four major things affecting manufacturers' viability," he says. "One is industry size. Operating within a particular industry size each manufacturer is looking for the biggest viable share.

"I say 'viable' because I happen to believe we're in the position of being viable. It is not volume or share for the sake of volume or share.

"Next point, you reduce your costs as far as you possibly can. We're having quite considerable success in Britain in improving our cost — and, yes, I know the rest of the world is marching ahead as well.

"Thirdly, revenue. Therefore pricing is a vital piece.

"And the final aspect is the product program," maintains Toy.

On the first point, he explains, "It is not as simple to say that if you spend more marketing money you're reducing your margins or you're reducing your viability. In fact, you might generate incremental volume out of that, and make, in fact, incremental profit. So, your total viability is improved.

But he accepts that there is a danger if any volume increase is insufficient to offset extra advertising or promotional spending.

• "If a manufacturer is running his business sensibly he will not put a program in place if it's not about to generate additional profit for him. Why should he?" Toy asks rhetorically.

With a big share of a big market, Ford of Britain's sales results have an enormous influence on the company's standing in Europe as a whole. Is Ford's spirited defense of its British position part of an overall strategy to maintain its hard-won lead in Europe (12.8 percent to the end of August)?

Toy is dismissive.

"Frankly I have far too busy a business life to be looking over my shoulder at what is happening to Ford in Germany or France or Italy or anywhere else. I have a very single-minded purpose — how do I make sure Ford of Britain is at its most viable?"

Toy's competitors are BL and Vauxhall. To the end of August, BL had 18.3 percent and Vauxhall-Opel had 14.5 percent, compared with Ford's 30.3 percent. No other auto group is anywhere near these numbers, with VAG, PSA and Nissan around 5 to 6 percent. Renault and Fiat, with substantial standings in the rest of Europe, are even lower.

• Which company does Toy identify as his stronger competitor — BL, which is bigger, or Vauxhall, which has made most growth in the past two years?

With hesitation, he replies, "In the long haul you have to accept that if product is a big piece of your competitors' strength or weakness, then what has been happening in the past two, three years — and what is happening right now — then Vauxhall, product-wise, has to be our strongest competitor."

To an extent, Ford's strength is a result of its rivals' past weaknesses. But that disguises the fact that during the late 1960s Ford undertook a detailed sociological study of UK population, purchasing power, likely trends. It was on the basis of these results that it began assembling its two-tier distribution system.

That program is largely still in place, and is paying dividends. "In good times and bad, because we planned the dealer organization the way we did, we've had fewer bad times than most of our competitors," comments Toy.

There is little doubt that Ford's continuous product renewal program was another major factor. The same policy was not continuously taking place at other UK manufacturers. And it was Ford, more than any other auto maker, which identified the growing UK trend towards company cars.

• While high taxation and wage restraints were imposed in the UK, many employers began to provide free cars for deserving employes as perks. There are no reliable figures to indicate the true extent of this, but 70 percent of all new-car purchases are estimated to be by this means. Ford's stranglehold on this business is only now being tackled seriously by its competitors.

Many of Ford's competitors believe its 30-percent slice of the market is unrealistic and will start to slide as BL and Vauxhall get their acts together. Yet Ford has maintained share as Vauxhall has greatly increased its. BL — set on a course to improve its share — has maintained it. Among them they sell three out of five cars in the UK.

These days, though, more Ford executives talk in terms of "maximum viable share" rather than pure numbers.

Sam Toy's confidence in Ford of Britain's future stems from the company's product programs.

"That's not just new models," he says, "We're talking about diesel engines, automatic transmissions, a whole raft of stuff. It won't just be beautiful new cars."

Toy named head of Ford of Britain three years ago

Sam Toy, 60, was appointed chairman and managing director of Ford of Britain three years ago.

He joined Ford in 1948 as a graduate trainee and held various export and sales posts in Britain before a 1961-63 stint in the U.S. as manager of British Ford sales.

He continued his climb up the Ford of Britain ladder until he joined the board in 1974. He was director of sales before his current appointment.

Sam Toy is a Cornishman. During the war he was a pilot and flying instructor in the RAF and later returned to Cambridge University. He graduated in 1947 and took his Masters Degree in 1950.

This small diesel, Ford's first for the British market, will be available in Escort and Fiesta at year-end.

Toyota reports net

Toyota Motor Corp. reported consolidated net income of $963.4 million in the fiscal year ended June 30, the company's first full year after the merger of Toyota Motor Co. and Toyota Motor Sales. Co.

Japanese exports slip a bit

Gains in Europe, Americas offset elsewhere

Japan's vehicle exports slipped fractionally the first half of this year — but Europeans could be forgiven for not noticing.

Japanese shipments to European destinations added an additional 125,000 units in comparison with the same period last year. But in overall terms this increase of nearly a quarter — plus smaller gains of 17,000 to Central America and 9,000 to North America — were offset by decreases to other parts of the world.

Oceania (essentially Australia and New Zealand) shipments fell by around 67,000 (29 percent). Africa was down a similar amount, and by more than 41 percent. Exports to South America were halved to around 28,500.

With shipments to Southeast Asia and the Middle East more stable, the result was that total Japanese exports slipped by 0.6 percent to 2.87 million units.

During the same period production increased by 2.5 percent to 5.58 million, bolstered to some extent by increased domestic demand. That went up by 1.2 percent to 2.64 million registrations of all types in the first half.

• The U. S. was again the chief port of call for Japan's huge car carriers. The total was 1.1 million, some 14,700 more than in the first half of last year.

Saudi Arabia was once more No. 2 (188,600).

Australia (124,300) slipped from third place to fourth, between the UK (131,300) and West Germany (121,200). The two European countries experienced greatly increased overall demand in the period.

Canada (105,200) dropped from fourth to sixth. It was the only other country to have touched the six-figure number during the reporting period.

JAMA's export figures can only give a broad outline of trends. Varying national demands, stocks and limitations can result in different buying patterns emerging at the customer end. So, too, can specific, large-number orders.

Meanwhile, a medium range survey conducted by the Japanese business and industry newspaper Nikkei Sangyo Shimbun indicates that the country's automobile production will increase from the present 12 million to 16 million units within the next five years.

But, it says, the number of vehicles produced outside Japan will increase from 1.6 to 3.7 million.

The pioneer in this area will be Nissan, which, in addition to its Mexican, Taiwanese and South African factories, will have production facilities in Spain, Italy and the U. S.

Toyota's non-Japanese production by 1988 will amount to 700,000 — as a result of its joint production in the U. S. with General Motors and a joint venture in Taiwan.

JAPAN'S EXPORTS BY COUNTRY

Two years after its initial showing, Ford of Europe's Escort convertible has gone into production. Ford talks of annual sales of about 10,000 for its first open-top production car in more than 20 years. The car is being made by Karmann of Osnabruck, West Germany—the company responsible for the cabriolet versions of the old Volkswagen Golf (Rabbit).

Auto show on the grand scale

Emissions an obsession at Frankfurt

Continued from Page 40

director, Daniel Goeudevert, said it was "impractical."

In the face of this barrage of criticism there are signs that the Government is wavering in its declared methods, if not its aims. Interior Minister Friedrich Zimmermann declared on the eve of the show that the Government's concern was on emissions rather than the technical ways in which control is achieved.

• The original plan was for the use of catalytic converters, but the industry prefers a high-octane solution to the lead-free gas problem. Even then, it is likely to take three years to convert all production, which means the fall of 1987 at the earliest.

The Frankfurt debate brought a sharp rejoinder from Geneva, the home of the International Metalworkers' Federation, which represents 3 million auto workers worldwide.

General Secretary Herman Rebhan commented, "The European auto managements ignore the fact that the Japanese, Europe's great competitor, have had lead-free gasoline for years. All automobiles for export from Europe to the United States have to be fitted to take lead-free gas."

He urged the European industry to take a longer-term view.

"This policy of outright resistance or the plea that time is needed to bring the technical requirements up to date will backfire on the industry, as it did in the United States," he said.

"These scare tactics of price increases, export restrictions — and we are still waiting to be told that lead-free gas will mean loss of jobs—will only help destroy the industry's credibility.

"In the Federal Republic of Germany these laws are being put forward by a Government that is right of center and probusiness. For European auto companies to put forward these arguments about costs, technical difficulties, lost exports is simply to lose credibility," he maintained.

• In addition to Germany's declaration for lead-free fuel, the UK government plans to introduce lead-free gas by 1990. The concerns are different—acid rain and destruction of forests in Germany, the link between lead and brain damage in children in Britain.

The Austrian and Swiss Governments have declared their intentions of following the German lead. But there have been no indications of the way in which the French and Italian Governments will move. As leading members of the European Economic Community their decisions will be crucial, for the belief is that no member state can go it alone — unless it can identify a specific health hazard.

The IMF's Rebhan is unequivocal. "The damage to children's brains, the withering of our great European forests, the increase in acid rain, all these stem in part from the use of lead in petrol.

"There is very great public concern about these issues. European auto companies are putting their greed for immediate profits above the long term interests of the industry," he declared.

As they say about the latest Broadway hit, "This one will run and run . . ."

West Germany's growth in autos seen continuing

A survey published by Shell on the eve of the Frankfurt Auto Show says that there will be 5 to 6 million more cars on West Germany's roads by the end of the century.

It believes the total will be between 28.5 and 29.9 million. And while the total population of the country will continue to decline (from 61.6 to 57.5 million), the car-driving population will rise sharply on account of the boom in the birth rate in the mid-'60s.

The oil company suggests the car ownership rate by the year 2000 will be between 499 and 520 per 1,000 population, the sort of levels reached in the U.S. in 1977.

world news briefs

Ford Motor contract for UK

Ford Motor Co. in the U.S. has awarded a $415,000 R&D contract to Lucas Chloride Vehicle Systems (LCEVS) in the UK. The contract, to develop a lead-acid vehicle battery system, is part of the U.S. Department of Energy's electric and hybrid vehicle program. LCEVS is a sub-contractor to Ford.

BMW hits 4 million

BMW Chief Executive Eberhard von Kuenheim predicts that his company's car output this year will top 400,000 for the first time. He cites strong demand for the 3-series, and believes the new four-door will stimulate sales still further.

Ford invests in Berlin

Ford of Germany is to invest $32 million in its West Berlin plastics plant. It takes total Ford investments in the city to $98 million.

BMW's bike arrives

BMW's new K100 motorcycle —its first truly new product in 60 years—has made its debut. It will build 22,000 (at its West Berlin factory) next year.

New Renault power

Cleon, Renault's highly automated engine plant near Rouen, is producing a new engine: 1.7 liters, four-cylinders, 254 pounds and 82 HP. They will go initially into top versions of the R-11.

And now, the new Moskvich

Russia is modernizing its automobile offerings. In addition to the long-awaited new Lada, the go-ahead has been given for a replacement for the medieval Moskvich, currently built at the Leninky Komsomol plant in Moscow. The car is due in 1986.

Parts deal off

Guest Keen and Nettlefolds (GKN) has withdrawn its $100-million bid for control of Associated Engineering (AE). This follows moves by Britain's Monopolies Commission.

Rolls-Royces under the hammer

"The finest single collection of Rolls-Royce motor cars ever auctioned" will come under Christie's hammer in London Oct. 22. The seven cars, which belonged to Stanley Sears, will be on display at the Earl's Court Motorfair (Oct. 20-30).

Nissan increases its stake

Nissan has increased its capital in Spain's Motor Iberica. It now holds 65.5 percent, worth approximately $65 million. The investment will be used to increase production of Nissan Patrol and the Vanette, to be introduced next year.

Half-million Metros

Austin Rover built its 500,000th Metro Sept. 15, three years after the model went into production at Longbridge, England.

Black ink at Talbot

Peugeot's Talbot subsidiary in the UK made a small profit in the first half of this year—its first in 10 years. The former Chrysler operation, now much slimmed down, made $2.25 million in the first half, compared with a loss of $60 million one year earlier.

Opel adopts ABS

Opel Senators and Monzas are to be offered with ABS anti-lock braking from December. The system will be extended to other models in the range.

Smaller Aston Martin

The restructured Aston Martin company is talking of a smaller, cheaper car in the Porsche category. It talks of investment of $7.5 million, which would suggest buying in engines — Jaguar's imminent new six?

MAN sees red

West German heavy vehicle maker MAN is forecasting pretax losses of around $110 million this year. It calls it "one of the most difficult years ever."

VW does Tunis deal

Volkswagen is to assemble Golfs, Jettas and small commercial vehicles in Tunisia from 1985. Volume will reach 5,000 a year by 1987.

What next?

From January, Nissan is to market as an accessory a windshield wiper which automatically springs into action when it detects rain. The device continuously varies the wiper speed in accordance with intensity and frequency of falling raindrops.

Renault in red until '85

President Bernard Hanon has said Renault will remain in the red until 1985. It lost around $160 million last year.

South African sales fall

First-half sales figures in South Africa show 155,098 new cars compared with 175,310 for the same period one year earlier.

Ladas to get five speeds

A five-speed option is to be offered on Lada sedan and Niva 4x4 models. They are being supplied by French component maker Soma.

Computer job for Edwardes

Sir Michael Edwardes, former BL chief executive, is to become chairman of ICL, Britain's leading computer company.

Diesel for little Peugeot

Peugeot's hot - selling 205 model has a diesel engine option. It follows announcement that the Ford Fiesta and Fiat Uno—cars in the same category —will also have diesels.

Anti-lock breakthrough

Lucas Girling's SCS anti-lock braking system — unveiled at Frankfurt—is being billed as a cost-effective breakthrough for small and medium front-drive cars.

French sales static

French new-car sales in the first half amounted to 1.06 million, a 0.3 percent increase on the same period last year. Domestics went down once more, and imports increased by almost 11 percent. Foreign cars now account for 31.6 percent (334,900) of the market — an unprecedented level.

New Jaguar motor near

Jaguar Cars will unveil its new six-cylinder engine in a few weeks. Known as AJ6, it will have (initially) a capacity of 3.6 liters, features four valves per cylinder and have an output of 225 HP. It will be seen in the cabriolet versions of the XJ-S and, from next year, in the all-new XJ-40 sedan.

His hands are full—of awards

Broadway AMC/Jeep/Renault, Littleton, Colo., has been named the top Jeep dealership in the U. S. out of approximately 1,700 Jeep outlets nationwide, AMC announced. Joseph Cappy, left, AMC vice president of marketing, presented the award to dealership owner Gerald Morris at the company's 1984 New-Car Show in Reno. Morris was also given the No. 1 Dealer in the Western Region award and the Top 20 Sales Leader trophy.

September rise is 7th in row

Model-year sales climb 16.8 pct.

Continued from Page 2

was up 14.84 percent, to 1,481,382 from 1,289,983. Chrysler Corp. sales of 819,209 units were up 24.36 percent from 658,720. American Motors climbed 84.30 percent, to 183,005 from 99,300. Volkswagen was off 22.58 percent, to 83,150 from 107,396.

Shares of the domestic market were readjusted over the past model year, with Chrysler and AMC showing improvements and Honda becoming a factor for the first time. Chrysler was up to 12.65 percent from 11.88 percent in the '82 model year. AMC grew to 2.83 percent from 1.79 percent. Ford dropped to 22.88 percent from 23.27 percent. GM slipped below the 60-percent mark, to 59.86 percent from 61.12 percent. VW skidded to 1.28 percent from 1.94 percent, and Honda picked up 0.50 percent its first model year on the domestic chart.

• The September domestic sales gain included plusses for all the auto makers except VW. Ford Motor Co. showed the greatest improvement, with a gain of 21.13 percent. Ford sales climbed to 133,442 from 110,166 a year earlier. Chrysler was up 15.97 percent in its 13th consecutive month of improved sales, moving up 64,061 from 55,237. GM was up 4.18 percent to 314,315 from 301,692.

American Motors reported sales of 14,105 AMC and Renault domestic products, up 14.28 percent from 12,343 the preceding year. VW was down 18.83 percent, to 7,317 from 9,014, and Honda reported a September total of 5,067.

In September, GM earned 58.39 percent of the domestic market, down from 61.76 percent a year earlier. Ford claimed 24.79 percent, up from 22.55 percent. Chrysler moved up to 11.90 percent from 11.31 percent. AMC held 2.62 percent compared with 2.53 percent the preceding year; VW dropped to 1.36 percent from 1.85 percent, and Honda had 0.94 percent.

In the ninth month, six U. S. makes suffered sales losses: Plymouth was down 7.41 percent; Imperial was down 77.54 percent; Buick was down 8.52 percent; Chevrolet was down 2.87 percent; AMC was down 63.19 percent, and VW was down 18.83 percent.

On the other hand, Chrysler was up 32.88 percent, Dodge was up 25.12 percent, Ford was up 16.88 percent, Mercury was up 34.17 percent and Lincoln was up 18.31 percent. Cadillac stayed ahead by 2.38 percent, Oldsmobile climbed 19.20 percent, Pontiac was up 22.06 percent and Renault was up 67.16 percent.

The September market-class breakdown featured U. S. intermediates beating out the imports for the largest share of the market. Intermediates claimed 29.52 percent; imports had 23.59 percent; compacts had 16.37 percent; subcompacts had 12.34 percent; standards had 12.10 percent, and luxury models had 6.08 percent.

Small inventories was a reason offered by some of the major importers for their September-to-September declines.

Top-seller Toyota plunged 34.03 percent, bringing its year-to-date total closer to its 1982 level. Second-place Nissan captured the high spot through sales of 39,951 in September compared with 24,882 for Toyota. Nissan sales so far this calendar year are 411,202 compared with 407,511 for Toyota. A year ago Nissan had 355,351 and Toyota claimed 400,775.

Honda was down 6.38 percent in September, though if its U. S.-built products were included, it would have been up 11.03 percent. Mazda and Subaru stayed close to their year-ago sales.

Jaguar extended its winning streak to 34 months and reported record sales of 1,276 luxury passenger cars in September compared with 797 a year ago. Mercedes was up 1.23 percent; Peugeot was up 11.53 percent; Volkswagen was down 22.97 percent; Audi was off 26.89 percent; Porsche was up 63.14 percent; Saab was up 12.74 percent, and Volvo was up 46.54 percent.

Import sales for the first nine months of this year were up 7.17 percent, to 1,803,613 from 1,682,929.

Domestic sales in the final September period were up 8.96 percent, to 241,198 from 221,369 last year.

GM was up 7.92 percent and earned 60.05 percent of the market. Ford was up 13.25 percent and had 24.32 percent of the market. Chrysler was up 2.65 percent with 11.31 percent of the market. AMC was up 51.57 percent and had 2.20 percent of the market. VW dropped 28.49 percent and had 1.57 percent of the market, and Honda held 0.55 percent of the market.

Year-to-date sales were up 16.86 percent, to 4,981,085 from 4,262,595.

Ford claims '83 lead for both cars, trucks

DETROIT.—Ford claimed its Escort and F-Series pickup were the best-selling car and truck in America in the 1983 model year. Ford said sales totaled 323,900 Escorts and 412,911 F-Series pickups.

Ford said Bronco led the large-utility segment (40,719) and Econoline topped all industry vans (153,477). Ford claimed leadership in cars and trucks in 1982, the only other year when there was a double championship.

*—AMC does not issue a breakdown for ten-day periods.

It's more than full-year total for 1982

5-millionth car of 1983 assembled

By Mary Beth Mayer
Staff Writer

Last Wednesday (Oct. 5), the domestic auto makers assembled the year's 5-millionth car — a production point that was never reached in 1982. Last year's 12-month total was 4,973,870.

So far this year, there have been 5,081,757 cars completed, a 27.08 percent gain from 3,999,024 units finished in the comparable 1982 period.

The manufacturers wrapped up September production with 629,056 units, up a substantial 48.00 percent over 425,047 finished during September last year. It was the highest total for the month since 741,768 cars were built in 1978.

During the third quarter, the makers built 1,574,183 cars, up 29.53 percent from last year's 1,215,347. It was the highest output for the third quarter since 1,651,965 units in 1979.

Last week, the manufacturers slated production of 166,142 cars, 2.23 percent ahead of the previous week's 162,520 and 102.13 percent more than 82,197 built in the year-ago week.

Last week's estimated total is the most for any week since 172,443 cars were completed the week ending May 16, 1981.

Breakdown for last week by company was: General Motors, 58.96 percent; Ford Motor Co., 21.93 percent; Chrysler Corp., 14.20 percent; American Motors, 2.71 percent; Volkswagen of America, 1.42 percent, and Honda, 0.78 percent.

Sixteen auto production facilities put in overtime last week.

GM had six plants operating two shifts on Saturday (Oct. 8). They were: Detroit, Doraville (Ga.), Fairfax (Kans.), Flint (G, B and D lines), Lansing and Linden (N. J.). Working one shift that day was GM's Bowling Green (Ky.) Corvette plant.

Six Ford facilities worked overtime last week. Edison (N. J.), Kansas City and St. Louis worked daily and Saturday overtime, while Chicago, Lorain (O.) and Wayne (Mich.) put in extra daily hours.

This week, seven Ford facilities will be working extra hours. Scheduled to operate Saturday (Oct. 15) are the Edison and St. Louis points. Working daily overtime this week are the Atlanta, Chicago, Dearborn, Lorain and Wayne plants.

Daily overtime was logged at three Chrysler points — Belvidere (Ill.), Jefferson (Detroit) and Newark (N. J.). Those three Chrysler plants are scheduled to work both daily and Saturday overtime this week.

Canadian truck output sets record for third quarter

Third-quarter truck production in Canada was an alltime high for that period.

During the year's third three months, 116,640 trucks were completed, up 18.93 percent from 98,076 built in the year-ago period. The next best third quarter ever was in 1977 when 113,729 units were assembled.

Year-to-date, truck production stands at 404,401, 4.34 percent better than 387,591 finished at this time last year.

In September, the manufacturers built 52,021 trucks, 49.39 percent more than 34,823 in the year-ago month and the highest September sum since 1977 when 55,750 units were completed.

Last week's truck output was targeted at 11,862, a 6.52 percent decline from the 12,689 units finished the previous week but 192.97 percent better than the year-ago total of 4,049.

Third-quarter auto production totaled 177,222 units, down 3.81 percent from the 184,233 cars completed in the comparable 1982 quarter.

So far this year, 734,054 cars have been assembled, up 9.58 percent from 669,932 finished in the year-ago period.

At 72,925, September car production was the best since 74,445 units were built in that month in 1980 and was 2.63 percent over the 71,062 in the year-ago month.

Last week's estimated car output was 19,021, up slightly from 18,893 units the week before, but nearly four times the year-ago week's total of 5,128.

Ford Motor Co.'s St. Thomas (Ont.) facility is scheduled to reopen today (Oct. 10) after several weeks of retooling to add production of full-size Crown Victoria and Grand Marquis cars to the Escort/Lynx subcompacts already built there.

Chrysler Corp.'s Windsor (Ont.) facility began production of the Dodge Caravan, Mini Ram Van and Plymouth Voyager Friday, Oct. 7. Official drive-off ceremonies will be held Nov. 2, a spokesman said.

NADA to feature 2nd exhibit hall at Dallas convention

WASHINGTON. — For the first time in its 67-year history, the NADA Convention and Exposition, to be held Feb. 4-7 in Dallas, will include a second exhibition hall devoted entirely to one product.

While NADA's convention in Las Vegas last year set a record level for exhibit floor space, the 1984 total of 137,000 exceeds that by 23,000 square feet.

The unprecedented demand for additional space has resulted in an exhibit hall featuring only van conversions. Over 200 automotive and automotive-related services and manufacturers have reserved space in the Dallas Convention Center.

Truck production in month, quarter highest since '78

Domestic truck production totals for September and the third quarter of 1983 were the best in five years.

Last month, production reached 230,349 units, a 55.28 percent gain from 148,349 built in the same month last year. It was the highest sum for that month since 1978, when 300,115 trucks were produced.

Output for the third quarter was 585,383, up 29.31 percent from 452,727 in the comparable 1982 period. The quarter topped all third quarters since that of 1978 when 856,513 trucks were finished.

Year-to-date, the truck makers have produced 1,764,845 units, a 16.01 percent gain from 1,521,365 assembled in the year-ago period.

Last week's output was targeted at 57,076, up 5.94 percent from 53,878 completed in the previous week and 131.84 percent more than the 24,619 units assembled in the year-ago period.

Last week's total is the most for any week since 58,483 trucks were built in the week ending July 14, 1979.

Saturday (Oct. 8) overtime was scheduled at General Motors' Lordstown, Pontiac and St. Louis truck points.

Ford Motor Co. had six facilities on daily and Saturday overtime last week. Working extra hours were: Kansas City, Lorain, Louisville, Norfolk, Michigan and Twin Cities.

Chrysler Corp.'s Warren, (Mich.) plant began working a second shift last week, calling back 1,300 people.

This week, Ford plans extra daily hours at its Louisville and Michigan points and Saturday (Oct. 15) overtime at its plants in Kansas City, Lorain, Norfolk and Twin Cities.

Don't raise ceiling on car imports, Chrysler warns

GM plans complicate U.S.-Japan trade talks

By Geoff Sundstrom
Washington Reporter

WASHINGTON. — U. S. efforts to negotiate with Japan on how many cars will be allowed into the United States under a fourth year of export restraints are being complicated by General Motors' so-called "Japanese strategy."

Last week Chrysler Corp. put heavy pressure on the U. S. Government to stop GM's import plans and hold the line on Japanese imports. Chrysler threatened to import its own small Japanese cars to replace its American-built cars, costing more than 20,000 jobs, if the import restraints are raised or eliminated.

The Reagan Administration is already said to be concerned over a standstill in U. S.-Japanese agricultural trade talks. If these concerns are linked to the Voluntary Restraint Agreement negotiations, resolution of the auto restraint question may be delayed until after President Reagan's Japan visit next month, trade sources say.

GM's plan to import up to 200,000 Isuzu and Suzuki small cars hinges on whether the Administration settles for an increase in the present ceiling of 1.68 million Japanese cars per year.

The Japanese are said to want a 2.2 million ceiling that would allow them to hold 22 percent of the American market. That number would easily accommodate GM's imports.

GM needs the Japanese cars to improve its sales in the small-car field. Chevette has been around since the 1976 model year, and GM's own replacement for it is years away.

The Japanese cars won't help GM's overall CAFE rating, however, since captive imports aren't counted in the fleet average. (GM owns 34 percent of Isuzu and 5 percent of Suzuki.)

The status of the proposed GM-Toyota small car has not been decided as far as CAFE ratings are concerned. GM and Toyota want to build 200,000 cars a year in a GM plant in California.

GM hopes the Toyota models will qualify. GM is running out of CAFE credits from prior years; it fell short of the standard for the '83 model year and probably will continue to do so.

Should the government not reconsider its fuel-economy standards, GM would be forced to alter its product mix or pay hundreds of millions of dollars in fines. Unless, of course, it can get a lot more small cars into its fleet.

The GM-Toyota venture ap-

Don't wait for this one

Classy convertible is this General Motors prototype N-car, caught unofficially as it is put through its paces by test driver. As of now, GM has no plans to produce this version of the N-car.

'Cheap' gas, engine woes cripple diesel car sales

By Jim Piegue
Staff Writer

The diesel-car market continued its disappearing act during the 1983 model year.

Domestic and import makers sold 195,041 diesel-powered cars during the period, a staggering 44.92-percent plunge from the 354,128 sold during the '82 model year and a far cry from 1981's peak sales of 536,440 cars.

The diesel cars accounted for a paltry 2.21-percent of total 1983-model sales, less than half the 4.59-percent penetration of 1982 and well below the 5.98-percent share that diesel cars held during the 1981 model year.

The fading popularity of the diesel engine can be blamed on stabilized or lower gasoline prices, the renewed consumer interest in performance cars and problems — be they real or perceived -- with some diesel engines, particularly those sold by General Motors dealers.

There were plenty of losers, only a few winners.

Winner: Mercedes-Benz, which supplanted Oldsmobile to become the number one individual retailer of diesel cars in the U. S. and the maker holding the biggest chunk of the market.

The German maker sold 55,903 diesel cars during the 1983 season, up 10.73 percent from the 50,484 sold in '82. Mercedes doubled its market share — from 14.26 percent last year to 28.66 percent in 1983.

Loser Number One: General Motors. Its 1983-model diesel sales of 74,846 units represented a 60.28-percent drop from the 188,444 sold during 1982.

GM market penetration hit the skids, too. The company's 38.38-percent share of the diesel market was down 14.83 percentage points from the 53.21-percent share of the '82 model year. In 1981, GM's diesel market share topped 63 percent.

All GM divisions reported major drops, both in volume and in market penetration. Oldsmobile, GM's diesel volume leader, sold 44,136 diesel cars during 1983, down 49.27 percent from 87,015 during 1982. Oldsmobile market penetration slipped nearly two percentage points — from 24.57 percent to 22.63 percent in 1983.

Loser Number Two: Volkswagen-Audi. Despite a 17.28-percent increase in diesel sales by Audi, the VW-Audi aggregate dropped 51.61 percent because of poor diesel sales by Volkswagen.

VW-Audi sold 35,756 diesel

Still no manual gearbox for Corvette

DETROIT.—High-tech problems continue to plague the high-tech manual transmission for the '84 Chevrolet Corvette. It was expected in showrooms in June. Dealers now tell customers they don't know when it's coming. Of three salespeople in Chevy points here, two said they didn't know when manuals would be shipped and one said it would be available in November. In the meantime, 'Vette buyers wanting the 4-plus-3 no-extra-cost manual with computer-activated overdrive in the top three forward gears will have to wait. Dealers said some customers are willing to do just that—and for an unpredicted time.

Honda names Kume to presidency

TOKYO. — Tadashi Kume, 51, formerly senior managing and representative director, has been named president of Honda Motor Co. He succeeds Kiyoshi Kawashima, 55, who becomes the firm's third supreme advisor and continues as a director. Founder Soichiro Honda, 77, retired as a director but remains a supreme advisor. Kume is only the third president in Honda's history.

Tight supply of cars puts a cap on sales

Import inventory hits 30 days

By Richard A. Wright
Assistant Managing Editor

The inventory of new imported cars dipped so low that it retarded sales during September. The industry opened October with a 30-day supply of cars, from a bare-bones 26-day stock a month earlier.

The inventory was still very short — in fact, it was not much bigger than a month earlier, as there were 199,339 new imported cars in stock Oct. 1, compared with 195,418 a month earlier.

Most of the gain in days supply resulted from the lower sales rate in September — in turn caused by the short inventory — rather than from any significant change in the number of cars in stock.

A year ago, there were 354,500 new imported cars in inventory, a much healthier 48½-day supply. An inventory of about 60 days (which includes cars landed in port, but not yet delivered to dealers) is generally considered ideal. Very few nameplates are anywhere near 60 days.

The supply of new imported pickup trucks in inventory also rose during September, from 30 days to 32 days on Oct. 1, but the number of trucks in stock was down to 51,375 from 61,068.

The combined imported car and truck inventory Oct. 1 totaled 250,714 units, a 30½-day supply, compared with 256,486 units Sept. 1, a 26-day stockpile.

• As was the case a month earlier, the great majority of import lines was in very short supply. Stocks of Japanese nameplates totaled 149,259 cars, a 28-day supply, compared with 139,629 a month earlier, a 22-day supply.

Japanese makes and their Oct. 1 days-supply figures were: Nissan, 17; Mazda, 24; Toyota, 27; Honda, 27; Isuzu, 31; Subaru, 34, and Mitsubishi, 52. In addition, Chrysler Corp. had a 77-day supply of Mitsubishi-built cars, including Plymouth Colt, 68; Dodge Colt, 65; Sapporo/Plymouth Conquest, 77, and Challenger/Dodge Conquest, 79.

West German cars in stock Oct. 1 totaled 29,340, a 37-day supply, compared with 33,896 a month earlier, a 36-day stock.

German nameplates and their Oct. 1 days-supply figures were: Porsche, 16; Audi, 21; Mercedes-Benz, 28; BMW, 43, and Volkswagen, 56. In addition, VWoA had an 82-day stock of U. S.-built Rabbits.

Days-supply of other European lines Oct. 1 were: Jaguar, 15; Volvo, 21; Saab, 23½; Peugeot, 56; Alfa Romeo, 94, and Renault, 104. In addition, there was a 71-day supply of Renault Alliance and a 71-day supply of Renault Encore models built in the U. S., Oct. 1.

Days-supply figures for imported pickup trucks Oct. 1 were: Toyota, 19; Nissan, 23; Mazda, 33; Isuzu, 65; Chrysler/Mitsubishi, 74, and Mitsubishi,

Third lamp required for 1986 models

Dole orders high-mount stoplight

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — A third, high-mounted red stoplight will be required on all 1986 cars. It will be in the center of the car and must be of a specified minimum size. It can be attached either inside or outside the vehicle.

Transportation Secretary Elizabeth H. Dole believes the extra light will "cut the number of rear-end collisions significantly, eliminate 40,000 injuries and save an estimated $434 million in property damage annually." It would also prevent some fatalities, she said.

This is an amendment to Safety Standard 108 and is believed to be the first major vehicle regulation promulgated by the Reagan Administration.

Ironically, it is also one of the "midnight" proposals made by former NHTSA chief Joan Claybrook before she left office. The regulatory reform program of April, 1981, was intended to kill those proposals.

The third stoplight is also part of a comprehensive safety bill backed by Senator John Danforth, Missouri Republican.

The research on the third stoplight, also done under the previous NHTSA regime showed that in 1980 there were 3.5 million rear-end collisions and the low-mounted stoplights were lighted in 2.3 million of them.

NHTSA estimates that some 900,000 of these collisions might be avoided if the stop lamps were high-mounted and that as many as 40,000 of the 600,000 injuries might also have been avoided if "all cars had been equipped with the new eye-level stoplight."

• An NHTSA study in May, 1980, reported on accidents over a one-year period for some 5,400 telephone company cars. The 2,500 cars with a single high-mounted stoplamp had 53 percent fewer accidents.

Those results were similar to those in a 1978 experiment with 2,100 Washington taxis and were similar to the results of a 1981 survey by the Insurance Institute for Highway Safety. However, some critics said the benefits might disappear once the novelty wore off.

Some makers, wanting more design flexibility, objected to the single lamp requirement and one wanted the requirement phased in. There was also some disagreement about light intensity. In any case, had the auto makers been convinced of its safety benefits, such a device could have been volunteered.

In fact, General Motors did use such lamps on the '70-'71 Toronado and '74-'76 Riviera. The benefits are less for small cars because of height differences.

As an indication of the emphasis being given this first safety initiative by the agency in 2½ years, Acting NHTSA head Diane Steed issued her own statement: "Our decision that this new equipment be re-

Continued on Page 8, Col. 1

Chrysler makes it official

Gerald Greenwald, left, Chrysler Corp. vice chairman, and Missouri Gov. Christopher Bond participated in ceremonies officially reopening the company's St. Louis Assembly Plant II in Fenton, Mo. The plant, which began production Sept. 12, builds the Chrysler Fifth Avenue (shown) and other rear-wheel-drive big cars—Dodge Diplomat, Plymouth Gran Fury and, for Canada, Caravelle.

Kehrl warns against return to old ways

Will success spoil auto industry?

By Kathleen Hamilton
Financial Editor

DETROIT. — The U.S. auto industry will be severely tested in the coming months as the economic recovery tempts manufacturers to return to old ways, warned General Motors Vice Chairman Howard H. Kehrl.

"We are going to see whether temporary success will get in the way of permanent change," he told his audience at the Engineering Society of Detroit Presidents Forum lunch meeting.

In order to stay apace of international competitors, U. S. makers must maintain their drive to improve technology and use it properly, to make best use of human resources and to develop international alliances, he said.

Kehrl cited GM's best-case scenario which calls for North American vehicle sales to top 20 million cars and trucks and free-world sales to hit 60 million vehicles by the mid-1990s (up from a record 38 million in 1978).

In order to achieve such demand, the U. S. government deficit must be reduced, Kehrl said. He called on business leaders to encourage tax increases to solve the problem.

The U. S. auto industry will continue to increase its output during this period, but it is unclear whether it will be able to maintain or increase its share of world production, Kehrl said after the speech.

• With 30 companies in 86 countries producing vehicles, the competition will be intense and a shakeout can be expected, he said. International and intercompany exchange also will increase in frequency, he said.

"In 1950, the U. S. accounted for 60 percent of the GNP of the major industrialized countries," he said. "Today it's down to less than 40 percent . . . In 1950, this country produced three-quarters of all the world's automobiles and trucks. Today we account for one-quarter."

Part of GM's answer has been to group together engineering and manufacturing, so both sides can work jointly to improve the end product. Such an approach also has been taken for the small car GM is planning to introduce as a replacement for the Chevette and the GM-Toyota car.

"We have everybody's small cars torn down and we're looking at them," Kehrl said. "We know we can't do it by duplicating theirs (Japanese) because their labor costs are so low," so new technology will have to be the answer, he said.

General Motors will also have a $500 shipping advantage over foreign competitors for the small car, he said. The car is not planned for export, he said.

'84 models start well with 45 pct. sales hike

By Jenny L. King
Staff Writer

The new model year got off to an auspicious start in early October. Total sales reported by the major U. S. auto makers were up 45.07 percent from the 1982 mark, paced by Ford Motor Co.'s 67.83-percent gain.

With everyone but Volkswagen on the rise, the Oct. 1-10 performance amounted to sales of 191,965 this year compared with 132,326 the preceding year. Two years ago, the model year began with sales of 147,366 units, and back in 1980, 225,202 new cars were delivered.

Annualized domestic sales based on the most recent period were moving at a rate of 7,350,000. Actual year-to-date sales reached 5,173,023, up 17.70 percent from 4,394,921.

The daily sales rate for the period averaged 23,996, up 45.07 percent from 16,541 a year earlier. There were eight selling days in the period in '83 and '82.

Ford Motor Co. reported a sales explosion of 67.83 percent: Up to 38,745 from 23,086. General Motors did well for itself, too, up 46.97 percent, to 127,428 from 86,703. Chrysler Corp. sales were up 11.31 percent, to 20,114 from 18,071.

American Motors released a sales estimate of 3,650, up 10.61 percent from an estimated 3,300 a year ago. Volkswagen sales were off 3.26 percent, to 1,128 from 1,166, and Honda added 900 units to its 1983 tally.

• Ford improved its share of the early-October market by nearly three percentage points, climbing to 20.18 percent from 17.45 percent. GM rose to 66.38 percent from 65.52 percent. Chrysler dropped to 10.48 percent from 13.66 percent.

AMC lost ground, dipping to 1.90 percent from 2.49 percent, and VW was down to 0.59 percent from 0.88 percent. Honda held the remaining 0.47 percent of the domestic market shares this year.

For the period, Buick and Cadillac announced record sales and Pontiac had the greatest sales increase—87.29 percent — among all U. S. makes. Buick was up 24.14 percent, to 29,783 from 23,991; Cadillac was up 56.48 percent, to 11,767 from 6,752, and Pontiac was up 87.29 percent, to 17,135 from 9,149.

Oldsmobile was up 38.99 percent, Chevrolet was up 56.48 percent. Ford was up 76.87 percent and Mercury was up 83.35 percent. Lincoln was off 0.82 percent, Dodge was up 13.22 percent, Chrysler was up 4.93 percent and Plymouth was up 17.18 percent. Imperial had no sales reported for the period, AMC was down 58.33 percent, Renault was up 56.56 percent and VW dipped 3.26 percent.

Event had lasting effect on auto industry

10 years later, oil embargo still felt

By Roger Rowand
Engineering Editor

On Oct. 17, 1973, the oil ministers of the Arab members of the Organization of Petroleum Exporting Countries voted to cut oil production and exports by 5 percent immediately and then 5 percent a month until Israel withdrew from occupied Arab lands.

Thus, a decade ago today, the infamous oil embargo was launched in the wake of the Arab-Israeli Yom Kippur War. Few political events have had influences that penetrated so deeply into the auto industry.

Since that day cars have become smaller and more fuel efficient even as they continued to meet stringent safety and exhaust emissions standards.

Factories and manufacturing techniques have undergone revolutionary changes in the name of energy conservation.

Work life and all its ramifications have been altered by the embargo and never will change back to what they once were.

The embargo's influence has been most apparent in a drive for more miles per gallon from passenger cars. Nameplates have disappeared, appeared and put on entirely different types of vehicles. Corporate Average Fuel Economy (CAFE), gas-guzzler tax, fuel injection, on-board computers have become household expressions.

• In the 1978 to 1983 period alone, U. S. auto makers spent some $80 billion in reworking their products, largely with fuel economy uppermost in mind.

Many new nameplates have appeared since 1973.

They have been fuel-stingy entries that include Chrysler Corp.'s Omni/Horizon and the K-car with all its offshoots. From Ford Motor Co. have come Escort and Lynx and Tempo/Topaz. General Motors has introduced the Chevette and the fuel-efficient front-drive X-cars, J-cars and A-cars.

Also, of course, there are the downsized versions of nameplates that were in showrooms back in '73. Those include the Chevrolet Caprice, Oldsmobile Delta 88 and Buick LeSabre, the Ford LTD and Chrysler New Yorker.

The oil ministers met again in Vienna on March 17, 1974, and voted to end their embargo against the U. S., but the plans that had been set in motion continued and intensified.

The accompanying table shows how some of the cars shaped up back 10 years ago compared with their counterparts on showroom floors today.

'74 Models in Showrooms, October, 1973

	Wheelbase	Overall Length	Weight	City MPG	Price
Chevrolet Caprice	121.5	222.7	4,427	8.6	$ 4,100
Ford LTD	121.0	222.4	4,302	10.7	4,083
Chrysler New Yorker	124	225.0	4,690	8.4	5,130

'84 Models in Showrooms, October, 1983

Chevrolet Caprice	116.0	212.8	3,489	17.0	$ 9,399
Ford Crown Victoria	114.3	211.0	3,730	17.0	10,954
Ford LTD	105.6	196.5	3,001	23.0	8,605
Chrysler New Yorker	103.1	185.6	2,738	25.0	12,179
Chrysler Fifth Ave.	112.7	206.7	3,747	17.0	13,990

Specifications are for four-door sedan, standard engine.
Chrysler introduced new FWD New Yorker, retained old version and named it Fifth Avenue.
Ford LTD in the '84 model year is an intermediate and Crown Victoria is standard-sized Ford.

What if Carter had won? No quotas?

By Kathleen Hamilton
Financial Editor

What would have been the fate of the U. S. auto industry if Jimmy Carter had been elected in 1980 instead of Ronald Reagan?

The former president came to Detroit last week and answered at least part of that question by repeating his disapproval—first stated after he left office but before the auto slump began—of import quotas. The U. S. is capable of being competitive in the long run, he said.

He also told his audience at the Economic Club of Detroit meeting that he had no apologies for the provision he negotiated in the Chrysler Loan Guarantee Act that allowed the government to make a profit on the sale of Chrysler warrants.

The Loan Guarantee Board did the right thing by auctioning the warrants, he said.

Asked at a news conference about the chances of Chrysler Corp. Chairman Lee A. Iacocca if he should decide to seek the U. S. presidency, Mr. Carter smiled and said that if Iacocca should decide to run, "I think he would contribute a great deal to the Washington scene."

But for now, the former president has endorsed Walter Mondale and the Chrysler chairman has said he is not entering politics.

Mr. Carter criticized the Reagan Administration's high debt and trade and defense policies. He credited his own administration with beginning the decontrol policies that are now being implemented by his successor.

He was invited to Detroit by his former Treasury Secretary, W. Michael Blumenthal, who now heads Burroughs Corp. Mr. Carter met with Ford Motor Co. Chairman Philip Caldwell before the luncheon speech.

Mr. Carter requested the chat with Caldwell in Ford's Dearborn headquarters to discuss his plans for a presidential library, museum and study center at Emory University, Atlanta.

Getting 'em into the tent

Bargain hunters in this crowd clutched their tickets in anticipation of the lottery drawing held by Towne and Country Chevrolet, Toms River, N. J., during the dealership's $99 used-car sale. A similar sale was held at Dodgeland, U.S.A., Springfield, N. J. Both dealerships are owned by Toresco Enterprises, of Springfield.

On Camaro ragtop design

Coachbuilder says pair misused his secrets

By Jim Plegue
Staff Writer

Richard Straman, California-based coachbuilder, has filed a lawsuit against two other specialty-car firms, charging them with pirating his design for a Camaro/Firebird convertible model.

Named as defendants are Convertible Concepts, Ltd. (CCL), Blaine, Wash.; Scott Lipton, president of CCL; Duquet-Sawdy, a specialty-car firm in Utica, Mich, and Bud Sawdy, a partner in that company.

Straman said he entered an agreement with CCL in May of 1982 to market Camaro/Firebird convertibles, as well as to allow CCL to build conversion kits and grant sub-licenses to outside builders for Camaro/Firebird convertibles.

At about the same time, Straman, according to the suit, started negotiations with Sawdy on possible distribution in Michigan of the Camaro/Firebird convertibles. Sawdy, the suit alleges, was acting "as an agent or employe of CCL."

Straman said he terminated his agreement with CCL in September of 1982 because CCL's sales of the cars "were not remotely close" to minimum monthly targets specified in the agreement.

Following that cancellation, the lawsuit charged, "CCL, Lipton and Sawdy have knowingly and willfully disclosed (Straman's) trade secrets to others and they have each misappropriated and used (Straman's) trade secrets for their own benefit and to (Straman's) detriment."

Straman said both men signed non-disclosure agreements forbidding them from revealing information on his convertible design. The lawsuit asks for injunctions prohibiting both men from revealing details of the convertible design and also seeks punitive and exemplary damages.

Straman said his convertible is a unique design and that he has received approval to label the product "patent pending," though no patent has been granted.

Lipton claimed otherwise.

"It's a standard boot mechanism that the industry has used for 50 years," Lipton said. "The only thing that makes it unique is that you have to build a fiberglass piece to go over the boot.

"Once a product goes into the marketplace, it becomes public domain unless there are patents on the product, and there aren't any in this case," Lipton said.

Lipton said he paid $20,000 for the rights to Straman's convertible and said he met his monthly sales quotas for the first four months until finance rates jumped and sales took a dive.

"Nobody could have met

Backshop business continues strong

Service Index up again in August

By Francis J. Gawronski
Service Editor

The nation's strengthening economy seems to be rubbing off on the service and parts business in new-car dealerships.

For the third time in the last four months, according to the Automotive News Service Index, the rate of growth of shop business has been above 15 percent.

After the growth rate in July dipped 7.8 percent below that recorded in June, service and parts business in August showed an increase of 15.5 percent over the volume reported in the same month a year ago.

In May, shop business was 115.1 percent of the year-earlier total and jumped to 115.6 percent of 1982's business in June. In July, business dipped to 107.8 percent of the volume the year before.

The increase in August marked the sixth consecutive month in which new-car dealers' service-parts volume has shown an increase over the comparable year-earlier period.

For the fourth consecutive month, all five indicators used in the Service Index recorded an increase, led by sales of all parts and accessories, up 18 percent over the business registered in the same month in 1982.

• The next best increase was recorded in gross profit on all labor parts and accessory sales — the most important indicator from the dealer's viewpoint. It topped last year's figure by 16.1 percent, followed by shop parts sales, those used on both customer-paid and warranty work, which climbed 14.6 percent.

Total labor sales (customer-paid and warranty) topped last year's volume by 13.4 percent, while repair orders written were up 12.8 percent, the best showing since July, 1978, when ROs showed a 16.9 percent increase over the year-earlier volume.

Figures used in the Service Index are averages compiled from reports on shop operations from a cross-section of the nation's new-car dealers.

Because of the impressive showing in August, service and parts business for the January-August period jumped to 108.4 percent of the year-ago volume, compared with the 107.3 percent escalation in the January-July period.

Gross profit showed a 10.3 percent increase for the eight-month period, followed by sales of all parts and accessories, up 9.7 percent, and shop parts sales, up 9.4 percent.

Labor sales for the period registered a gain of 7.8 percent, while ROs climbed 2.2 percent over the year-earlier period.

SERVICE INDEX
115.5*

	Aug., '83 vs. Aug., '82	8 mos., '83 vs. 8 mos., '82
Gross Profit on All Labor and P&A	+16.1%	+10.3%
Repair Orders Written	+12.8%	+ 2.2%
Total Labor Sales (Customer & Warranty)	+13.4%	+ 7.8%
Shop Parts Sales (Customer & Warranty)	+14.6%	+ 9.4%
Sales of All Parts and P&A	+18.0%	+ 9.7%

*—Survey by Automotive News shows that dealers' service and parts business in Aug., 1983, was 115.5 percent of business in Aug., 1982. Service business in the eight months of 1983 was 108.4 percent of business in the corresponding period in 1982.

Hot-selling Fiero poses an unusual problem for Pontiac

By Joseph Bohn
Marketing Editor

Fiero is one of the fastest sales starters Pontiac has seen in a long time, though officials are antsy about creating the impression of a sellout.

With 20,000 sold orders firmly in hand and a full year's production capacity of 85,000, Pontiac is a quarter of the way there. The car has officially been on sale less than a month. It bowed Sept. 22.

Dealers, meanwhile, have placed in excess of 70,000 orders already, though John Middlebrook, Pontiac director of car distribution, carefully pointed out that these were subject to change, including cancellation, anytime prior to production.

"We're very happy with the flow, but we still have a lot of cars to sell," he said. "I wouldn't want to create the impression in a consumer's mind that we're sold out and there's no use ordering a Fiero."

Generally, the first 20,000 customer orders show the car appealing to a wide spectrum of buyers.

"It's not just the 25-year-old singles. The orders range from people over 60 to under 20," said Middlebrook, who didn't consider this unusual, since "a lot of people invariably want whatever's new."

It may mean, though, that the two-seater market is a lot broader than indicated by sales of cars like Ford's EXP.

Competitors, looking at Fiero's early success, are hoping it will stir the segment and benefit their own two-seater sales.

Some observers privately think Fiero could be the Mustang of the '80s, if Pontiac can get its production up, though that appears unlikely in the near future.

Middlebrook acknowledged there were "some ways" to accelerate production, but "the whole emphasis is on building the car right." Pontiac has reportedly been working rather hard to maintain even the current 426-a-day rate.

One danger with the Fiero's success is generating desire among customers which can't be met. A company risks antagonizing frustrated buyers.

On average, dealers have been telling customers they must wait two to three months for specific Fiero orders.

"We're counseling with the zones what the flow to dealerships should be. We're trying to avoid dealers getting too far out and writing too much business," Middlebrook said. He considered this normal for any hot car.

Some price gouging seems inevitable.

In a Detroit shopping center, one Fiero buyer, who traded in a Corvette, paid $14,000 for his 2-seater and seemed to consider it a bargain.

"I haven't heard any horror stories yet," Middlebrook said, though he indicated that there are always some people who wanted to be the first on the block to own such a new car and some high prices seemed inevitable.

A Pontiac spokesman added that a completely equipped Fiero did not price out at much over $12,000. Many dealers were trying to keep the price under $10,000, Middlebrook added, though the average appears to be above that.

Overall, distribution to an important market like California is pretty much in line with its size (10 percent of the U. S. market) and appetite for sporty 2-seaters (about twice the percentage of other areas), Middlebrook said.

Generally, this has led to a heavier concentration of Fieros on the West Coast.

If Fiero's momentum continues as it has, officials may tone down advertising support. Advertising support is currently far in excess of projected sales volume because Fiero is regarded as a "halo" car designed to help attract traffic for other Pontiac lines.

Removable top for Blazer/Jimmy

American Sunroof Co., division of ASC, Inc., has introduced a removable top for the downsized Chevrolet S-10 Blazer and GMC S-15 Jimmy. Called the Sun Blazer, the conversion replaces the vehicles' existing fixed steel top with a fiberglass hardtop that lifts off for open-air motoring.

2 long-wheelbase 4x4s added by Isuzu for '84

WHITTIER, Calif.—Two long-wheelbase versions of the four-wheel-drive compact pickups have been added to the Isuzu P'UP lineup for 1984.

The vehicles, offered in Deluxe and LS trim, have a wheelbase of 117.9 inches, compared with 104.3 inches for the short-wheelbase 4x4, and the overall length is 191.5 inches, compared with 174.4 inches for the SWB. They have a 7½-foot bed, 7.1 inches longer than the standard box.

The LS models are offered in four metallic colors — red, brown, gray and blue — and each is trimmed with a silver color and ribbed rocker panels, with a body-colored grille.

The interior features wall-to-wall cut-pile carpeting, special instrument cluster, fabric-covered seats and thick-cushioned steering wheel. With the optional bucket seats, there is a center console with extra storage space. AM/FM stereo radio is standard.

Changes for 1984 include larger standard mirrors, and an optional factory-installed pass-through rear window.

• For 1984, the Deluxe models feature color-coordinated exterior stripe, bright trim rings and AM/FM stereo radio standard on two-wheel-drive pickups. A chrome rear step bumper is optional.

All 4x4 pickups feature automatic locking hubs, which lock automatically when four-wheel drive is engaged. To disengage them, the driver must reverse direction for about four feet.

Standard engine in all P'UP models is an 118.9-cubic-inch, inline four-cylinder gasoline engine. The optional power plant is a 136.5-cubic-inch, in-line four-cylinder diesel engine.

In addition to the larger standard exterior mirrors, other changes for 1984 include a steering-column lock for greater theft protection and optional metallic paints on the Deluxe models.

Increase started by Volvo White in truck output

GREENSBORO, N. C. --Volvo White Truck Corp. has announced plans to increase production at its New River Valley (Va.) truck plant from 20 units a day at the end of September to 26 units by Oct. 20.

According to Thage Berggren, Volvo White president, the increase is a result of improved market conditions coupled with the company's own emphasis on product development.

"For the past two years, we've invested heavily in product development, and now it's beginning to pay off," he said. "Our dealers are reporting increased activity in the marketplace, and we're ready to re-

Continued on Page 97, Col. 1

New 4x4 model joins Isuzu team

A long-wheelbase four-wheel-drive model is new for 1984 from Isuzu, available either in Deluxe trim (shown) or top-of-the-line LS trim. Deluxe P'UP pickups feature bright grille and front bumper, bright window trim and either three-across bench seat or twin bucket seats.

truck industry news

Total tops 2.9 million units on light-truck surge

'83 model sales up 20 pct.

Franchised truck dealers and factory outlets retailed 2,903,540 new trucks of all types in the U. S. in the 1983 model year, according to preliminary reports, an increase of 19.9 percent over the year-earlier 2,421,194 units.

Sales of light trucks were up significantly over the previous year. The 12-month total of 2,727,452 units was 22.4 percent higher than the 2,228,567 vehicles retailed during the 1982 model year.

Compact trucks—pickups and sports/utility vehicles — topped the million mark for the first time in the 1983 model year. Sales totaled 1,020,945 units, a gain of 48.7 percent over the year-earlier 686,640.

The smaller vehicles accounted for 37.4 percent of the light-truck total during the 1983 model year, compared with 30.8 percent the previous year.

Medium and heavy-truck sales were down for the 1983 model year, but the declines were less than 10 percent. Small increases in the big-truck market were achieved in the final two months of the model year.

Sales of medium trucks totaled 46,648 units during the model year, off 5.8 percent from the previous year's 49,530. Heavies were down 9.5 percent, from 143,097 in the 1982 model year to 129,440 units.

• Chevrolet was No. 1 in total retail truck sales for the second consecutive year with 917,240 units during the 1983 model year, compared with 898,648 for second-place Ford.

Chevrolet also was the leader in model-year sales of compact trucks with a total of 261,158 domestic units, an increase of 62 percent over the previous year's leading 161,214 units.

Ford was No. 2 in small-truck sales with 207,654 domestic units, up 170.8 percent over the year-earlier 76,684, Ford's first venture in the domestic-compact field.

Toyota, which was in second place in the 1982 model year, dropped to No. 3 with 169,104 units. Its 1983 model-year sales, however, were 23.9 percent higher than the previous year's 136,478 vehicles.

In the first nine months of calendar 1983, industry sales totaled 2,284,077 units, an increase of 17.7 percent over the year-earlier 1,940,418 units. September sales were up 26.4 percent over last year to 277,273 vehicles, compared with 219,368 in September, 1982.

During the month, sales were higher than a year ago in all three market segments, and in two of them for the January-September period.

Light trucks were up 27.5 percent in September, from 204,723 units a year ago to 260,956. Me-

Chevy is No. 1 again in 1983 model sales

Record September sales enabled Chevrolet to retain leadership in retail truck sales in the 1983 model year.

Robert C. Stempel, Chevrolet general manager, said truck sales for the 1983 model year, which ended Sept. 30, totaled 917,240 units, a 20.9 percent increase over the 1982 total of 758,387.

Ford truck sales for the 1983 model year totaled 898,648, a gain of 19.1 percent over the previous year's 754,541 units.

Leading the Chevrolet sales parade were the conventional pickup trucks (C and K models, 10 through 30 Series) with a total volume of 390,598.

"These are the trucks that make America work," Stempel said. "They are the best-selling vehicles—including both trucks and passenger cars—that Chevrolet has on the market today."

Sales of S-10 pickups, introduced in 1982, totaled 181,162 in the '83 model year for an estimated 20.4 percent penetration of the compact-truck market. Dealers retailed 79,996 S-10 Blazers, a total which Chevrolet said was restricted only by production limitations.

Also showing significant sales gains during the '83 model year were panel vans and Sportvans, up 36.9 percent over last year, and Suburbans, with a 35.5 percent increase.

September sales of Chevy trucks totaled 99,206 units, eclipsing by 8 percent the former September record of 91,871 set in 1976.

During the month, LUV sales hit an astounding 10,298 units, almost all of them being disposed of at auctions throughout the U. S.

"The 1983 model year was marked by the return to the market of commercial users who had postponed purchases, the introduction of new compact sport utility trucks and the revitalization of the recreational vehicle market," Stempel noted.

Optimism brought on by the early stages of the economy's recovery prompted many commercial users to make truck purchases they had delayed for years, he added.

"The personal-use segment was attracted by the emergence of our S-10 Blazer, which attracted both traditional and non-traditional truck buyers, and the recreational market, which had been a very fuel-sensitive part of the truck industry, expanded due to the stabilization of fuel prices," Stempel said.

"Chevrolet's success for 1983 was possible because we had a broad range of products positioned to satisfy the expanding customer demand," he pointed out.

Ford F-Series tops in sales for 9th year

For the ninth consecutive model year, the Ford F-Series pickup is the top-selling truck in America. Ford Division reported 412,911 F-Series sales in the 1983 model year.

Ford also won two other truck titles, the company noted. Bronco led the sports/utility segment with 40,719 sales and the Econoline Van was No. 1 in that category with 153,477 sales.

Goodyear finds vast number of misaligned HDs

AKRON, O. — Nearly three-fourths of all truck tractors checked for alignment problems by Goodyear field service engineers in the last two years have had significant misalignment, a Goodyear report has disclosed.

Using a portable system developed by Goodyear to diagnose truck and bus alignment problems, engineers reported they found a startling number of both new and in-service tractors are scuffing away tire life

Continued on Page 86, Col. 4

Mileage adjustment

Goodyear claims both tire mileage and fuel economy can be improved through a "do-it-yourself" truck-alignment system it has developed.

Truck total tops 2.9 million units on surge of light units

'83 model year sales up 20 percent

Continued from Page 16

diums totaled 4,347, a gain of 6.2 percent over the year-earlier 4,092. Heavies climbed to 11,970 units, 13.4 percent higher than last year's 10,553.

Through September, light-truck sales totaled 2,146,502 units, an increase of 19.6 percent over last year's 1,195,009. Mediums were up 2.8 percent to 36,953 units, compared with 35,962 a year ago. Heavies were off 8.1 percent, from 109,447 units in 1982 to 100,622.

• Big Three dealers retailed 1,836,212 new trucks in the January-September period, an increase of 15.5 percent over the year-earlier 1,590,218. Record September sales enabled Chevrolet to regain the lead over Ford for the first time since last May.

During the month, Big Three dealers sold 225,000 units, up 26.2 percent over last year, with good gains for all four makes.

Chevrolet dealers retailed 99,206 units in September, 51.8 percent higher than the previous year's 65,344. Through September, the total was 723,774, a gain of 17.6 percent over last year's 615,339.

During the month, 86,035 Ford trucks were sold, an increase of 10 percent over the year-earlier 78,224. The nine-month count was up 17.6 percent to 717,346 units, compared with 610,245 in the like period in 1982.

Dodge and Chrysler - Plymouth dealers retailed 20,700 vehicles during the month, up 8.6 percent over the year-earlier 19,766. The total through September was 199,304 units, a gain of 4.6 percent over last year's 190,588.

GMC said its dealers sold 19,059 units in September, up 27.4 percent over last year's 14,962. The January - September count was 195,788, a gain of 12.5 percent over the 174,046 units retailed in the same period a year ago.

September sales of four-wheel-drive Jeep vehicles totaled 6,123 units, an increase of 21.9 percent over the year-ago 5,021. The nine-month count was 12.7 percent higher, 53,107 versus 47,130.

During the month, Volkswagen dealers sold 324 front-wheel-drive compact pickups, down 73.2 percent from last year's 1,210. Nine-month sales of the vehicles—which no longer are being produced—totaled 4,310, a decline of 51.7 percent from the year-earlier 10,051.

Spectacular increases were reported for September by three of the five distributors of Japanese-built compact pickups.

Sales of Nissan/Datsun vehicles during the month were up 62.2 percent to 16,106 units, compared with 9,928 a year ago. Through September, the count was 107,941, an increase of 51.2 percent over last year's 71,412.

• During the month, Mazda dealers retailed 5,200 vehicles, an increase of 78.8 percent over last year's 2,908 units. The nine-month total was up 75.5 percent, 52,244 versus 29,750.

Isuzu dealers sold 2,366 pickups in September, a gain of 52.2 percent over the year-earlier 1,555. The total through September was up 36.3 percent to 17,874 units, compared with 13,111 in the same period in 1982.

September sales of Toyota pickups softened after reaching record levels in August. Dealers sold 12,286 units during the month, up 4.1 percent from the year-earlier 12,809. In August, they retailed 26,161 vehicles.

Nine-month Toyota sales totaled 131,507 units, an increase of 23.2 percent over the previous year's 106,711.

Mitsubishi sales during the month totaled 869 units, bringing the nine-month count to 6,163 vehicles.

Court rejects Vt. diesel fee

MONTPELIER, Vt. — A Vermont Superior Court Judge has ruled the state's $50 fee for diesels is unconstitutional.

Ruling in a suit brought by the American Trucking Assns., Judge James Morse called the fee discriminatory since it is charged for out-of-state vehicles, but in effect is refunded to Vermont truckers.

The $50 fee, passed in 1982 when the state legislative session raised the diesel tax, was applied to all trucks larger than 18,000 pounds. At the same time, the legislators had reduced by $50 the state registration fee for vehicles of that same weight.

Goodyear finds vast number of misaligned HDs

Continued from Page 16

and wasting fuel because of misalignment.

The Goodyear Vehicle Geometry System (GVGS) was introduced in 1981 as the first portable alignment system, allowing one person to evaluate a vehicle's geometry in about 30 minutes. Goodyear said more than 1,000 of the kits are now in use.

"Tandem axles on a truck a half-inch out of alignment or front-end toe being out a quarter-inch translates to a 24 percent reduction in tire life," said Asa Sharp, Goodyear's manager of commercial-tire engineering.

In addition to extended tire life, proper alignment improves fuel efficiency because of straighter tracking and reduces vehicle maintenance costs because of less vibration, he noted, and improved handling also reduces driver fatigue.

Recently, he added, the GVGS adjustable reference bar was redesigned and new metal scribes for making reference points on a vehicle's frame were added to improve the positioning of the bar so it sits exactly square to the frame of the truck.

NHTSA interested in results of tests

Volvo crash data seems repeatable

WASHINGTON. — Some of the data on repeatability of high-speed crash results discussed at a recent NHTSA meeting at Ann Arbor, Mich., includes tests on seven 1983 Volvo 760s, two with diesel engines which add some 110 pounds.

In general, the data seems to have a high degree of repeatability, but better for the chest deceleration data than for the head injury criteria (HIC), which is generally considered more crucial.

Three tests were run by MIRA (Motor Industry Research Institute), of England, and four others by Volvo itself. Except for the driver HIC in a diesel 760 — recorded as 1004, very marginally above the acceptable 1000—all were handily below the critical 1000. The lowest driver HIC was 697. The highest passenger HIC was 990 and the lowest was 702.

The average HIC value was 864 for the driver and 790 for the passenger. Standard deviation for driver HIC was 96 and for the passenger 108. Accepting a 10 percent deviation for ordinary data collection, that makes the data look very repeatable.

However, considering the crucial nature of head injury, a statistician might want to have a confidence level of 95 percent. In that case, he would take the average value of the seven cars — 864 for driver and 790 for passenger—and add 192 to 864 and add 216 to 790. The top levels then would be 1056 for driver and 1006 for passenger. These are marginal and both are probably "pass" even for the 95th percentile confidence level.

• The high number becomes important in several areas: Saving lives, compliance with Standard 208 but at a lower speed and usefulness in rating models for consumer buying decisions. And separately, but importantly, this data is germane for a manufacturer, allowing a margin of safety.

The variation (for the 95 percent confidence level) for the passenger HICs would swing even wider since the deviation is greater. Using the average of 790 and the standard deviation of 108, the swing would be from 1006 down to 574 to be 95 percent sure.

The Volvo chest deceleration data looks good both in terms of "passing"—since 52 Gs is the closest any came to the acceptable 60 Gs—and in terms of deviation. Here, the average of the seven vehicles was 49 for the driver and 43.4 for the passenger.

The standard deviation was 2.0 for the driver and 1.5 for the passenger. Doubling that and adding it and subtracting it for a confidence level of 95 percent gives a swing between 45 and 53 for the driver and 40.4 and 46.4 for the passenger — clearly making the data somewhat more repeatable than for the HIC numbers.

Similarly, chest severity numbers — where the average was 453 for driver and 344 for passenger and the standard deviation was 51 for driver and 46 for passenger — are also more repeatable than the HIC. The so-called margin number for chest severity is 600 CSI and the highest average was 555 for the driver and 436 for the passenger.

What is striking about the Volvo data is that except for the one very marginal blip, all cars handily surpass the crashworthiness figures and most seem roughly repeatable with the HIC coming in at a lower level than the other.

Another striking fact is the similarity between the gasoline version and the diesel version.

Car brokers' squabble tossed out by court

GREENSBORO, N. C.—A Federal District Court in North Carolina has dismissed a civil suit by National Auto Finders, Inc., Wichita, against Nationwide Auto Brokers, Inc., Martinsville, Va.

In its suit, National Auto Finders attempted to show that National Auto Brokers had copied its sales and promotional materials, which the defendant denied. In a consent judgment, the court ordered both parties to discontinue any borrowing practices, and National Auto Finders was ordered to make a nominal payment to National Auto Brokers.

July market share highest since March, but trails '82

Import registrations rise for month

By Jenny L. King
Staff Writer

July registrations of new imported cars showed the highest market penetration since last March but the lowest for July since 1979.

Figures compiled by R. L. Polk & Co. showed new import registrations of 227,535 in July, up 12.09 percent from 203,002 for the same month a year earlier. Imports accounted for 28.84 percent of the month's market, highest penetration since 30.24 percent in March. In July a year ago, imports reached a record penetration for the month of 32.41 percent.

The top importers, all Japanese, increased their registration numbers in July but lost ground in shares of the import market. Mercedes, BMW and Renault Alliance were the only major companies to increase shares. Toyota was down 1.87 percentage points; Nissan was down 0.71 percentage points; Honda was off 1.04 percentage points; Mazda was off 0.58 percentage points, and Subaru lost 0.24 percentage points.

Volkswagen, down 1.32 percentage points, gave up fifth place to Subaru and fell to sixth. It was followed by Renault Alliance, on the charts for the first time in 1983 and counted by R. L. Polk & Co. as a U. S.-built import.

Eighth-place Volvo was down 0.05 percentage points; Mercedes was up 0.06 percentage points, and BMW finished the top-ten list with an increase of 0.15 percentage points.

The 10 leading imports claimed 86.61 percent of the total import market. A year ago, the top ten accounted for 89.96 percent.

• For the first seven months of the year, imports were up in numbers by 15.80 percent and up in market penetration by 0.30 percentage points.

Import registrations reached 1,485,746 January through July, 1983, up from 1,283,032 the preceding year. They captured 29.43 percent of the total U. S. market, up from 29.13 percent in 1982.

Nissan and Volvo enjoyed a larger share of the import market during the seven-month period, Renault Alliance picked up 5.20 percent following its debut in the imports listing and the category of others — imports other than the top 10 — picked up ground this year.

Toyota registrations through July totaled 316,900, or 21.33 percent of the import market. A year ago it claimed 305,211 registrations and 23.79 percent of the market. Nissan edged up to 20.49 percent from 20.05 percent. Honda dropped 1.62 percentage points, to 14.95 percent from 16.57 percent.

Mazda was down 0.10 percentage points, Subaru was off 0.46 percentage points and VW was down 1.27 percentage points. Volvo managed to gain 0.19 percentage points, Mercedes lost 0.14 percentage points and BMW was off 0.03 percentage points.

• Japan was the source of 73.59 percent of all new imports in July, down from 78.45 percent a year earlier. West Germany contributed 9.54 percent, the "U. S. imports" (Renault Alliance, VW Rabbit sedans and some Honda Accords) had 9.00 percent and Sweden provided 4.80 percent.

Registrations by country of origin, July, 1983, vs. July, 1982, were:

	July, 1983	July, 1982
Japan	167,444	159,248
West Germany	21,707	18,792
United States	20,474	8,235
Sweden	10,924	9,489
France	4,702	4,826
Great Britain	1,342	848
Italy	818	1,278
Ireland	124	286
TOTAL	227,535	203,002

For the first seven months, Japanese-built cars represented 73.26 percent of the market, down from 77.87 percent a year ago. West German cars were 9.67 percent of the total, U. S.-built imports 9.44 percent and Swedish cars 4.72 percent. The complete breakout follows:

	7 Mos., 1983	7 Mos., 1982
Japan	1,088,388	999,143
West Germany	143,716	126,959
United States	140,275	56,156
Sweden	70,034	54,876
France	27,941	28,572
Great Britain	8,791	5,307
Italy	6,132	10,013
Ireland	469	2,006
TOTAL	1,485,746	1,283,032

New import truck registrations were up 20.86 percent this July compared with the preceding year, climbing to 41,460 from 34,305. Registrations by major manufacturers included:

	July, 1983	July, 1982
Toyota	15,240	11,327
Nissan	12,034	7,298
Mazda	5,419	3,477
Dodge Ram 50	2,741	.....
Ford Courier	.....	3,279
Others	6,026	8,906
TOTAL	41,460	34,305

Truck registrations for the seven months totaled 258,438, up 8.88 percent from 237,360. Following is a breakout by major manufacturers:

	7 Mos., 1983	7 Mos., 1982
Toyota	89,995	77,118
Nissan	68,453	52,015
Mazda	36,472	19,848
Dodge Ram 50	15,357	.....
Ford Courier	.....	18,941
Others	48,161	69,438
TOTAL	258,438	237,360

Automotive News analysis of new-car registrations based on R. L. Polk & Co. statistical report.
Copyright, 1983, Automotive News

Court upholds $5 million award against Toyota

WEST PALM BEACH. — A $5 million judgment against Toyota was upheld in the Fourth District Court of Appeals, dismissing the auto maker's appeal of a decision in favor of the parents of three sisters killed in their Toyota after a collision.

In a 1981 Fort Lauderdale jury case, Betty and Wayne Moll, parents of the victims, were awarded $5 million — $3 million in punitive and $2 million in compensatory damages. Toyota was found negligent in the deaths.

In 1979, the Moll's daughters' Toyota was rammed from the rear, the fuel system ruptured, and the car exploded into flames.

In the auto maker's appeal, it was argued that Judge Miette Burnstein should not have allowed jurrors to award punitive damages.

New-car sales topple record in Britain

LONDON. — New-car sales in Britain reached a record 374,600 in August — 24 percent higher than the previous peak of 302,000 sales in August last year.

For the first time since 1978, the importers' share fell back in August by 3 points to 56.8 percent.

Car sales in Britain each August normally surge to more than 20 percent of those for the full year. On Aug. 1 each year new vehicle registration plates acquire a new letter indicating the year of the car, a device employed nowhere else and which has given Britain the most distorted sales patterns in Europe, and possibly in the world.

The top ten sellers in August were: Ford Escort, 40,912; Ford Sierra, 35,562; Austin Metro, 21,120; Ford Fiesta, 27,553; Vauxhall Cavalier, 25,332; Austin/MG Maestro, 13,986; Vauxhall Astra, 12,726; Triumph Acclaim, 10,244; Volvo 300 Series, 7,525, and Vauxhall Nova, 7,417.

Saab prices up $300 to $490 on '84 models

ORANGE, Conn.—Saab-Scania of America has increased U. S. car prices $300 to $490 for 1984.

In the 900 Series, the three-door hatchback is $11,110, up $360, and the four-door sedan is $11,420, up $370. Heated front seats and halogen headlights have been made standard equipment.

The Saab 900-S line offers a three-door hatchback at $13,850 and a four-door sedan at $14,310. The hatchback is up $300 and the sedan is up $360. New standard equipment items are halogen headlights for both models and power windows on the rear doors of four-doors. Windows in the front doors already were power-operated.

The Saab Turbo three-door hatchback rose $430 and now is $16,940, and the Saab Turbo four-door sedan climbed $490. It is $17,400. Center console and contour seats have been made standard on both models, and four-doors now have power-operated windows in the rear doors.

Automatic transmission is $390 extra on all models, up from $370 for '83. Saab said the price hike averages 2 percent after adjusting for equipment changes.

Week's auto production is 162,269

16 assembly plants work overtime

By Mary Beth Mayer
Staff Writer

Sixteen car plants worked extra hours last week and the week before, but domestic production last week was slightly below the previous week's output.

The car makers targeted last week's output at 162,269, down from 163,949 the prior week, but 66.60 percent ahead of the year-ago week's 97,403.

Breakdown for the week by company was: General Motors, 58.91 percent; Ford Motor Co., 23.06 percent; Chrysler Corp., 12.88 percent; American Motors, 2.77 percent; Volkswagen of America, 1.45 percent, and Honda, 0.93 percent.

So far this year, there have been 5,212,891 cars completed, up 27.28 percent from 4,095,826

Truck production is 56,219, down 3 pct. for week

Overtime schedules at 8 assembly plants put last week's estimated truck production at 56,219 units, which was down 3.07 percent from the 57,999 completed the previous week, but ahead of the year-ago week's output of 37,058 by 51.71 percent.

Year-to-date, there have been 1,845,410 trucks built, 18.23 percent more than the 1,560,993 units finished at this time last year.

Saturday (Oct. 15) overtime was scheduled by General Motors at the Flint No. 1 and No. 2 plants and Janesville (Wis.). Flint No. 1 worked one shift while the other two points worked two.

Today (Oct. 17), GM's Pontiac plant begins a week of downtime for inventory adjustment. Some 2,500 employes will be on temporary layoff.

Ford Motor Co.'s Louisville and Michigan plants worked daily overtime last week and its Kansas City, Lorain (O.), Norfolk (Va.) and Twin Cities (Minn.) facilities operated Saturday.

This week, Ford plans overtime daily and Saturday at its plants in Kansas City, Lorain, Louisville, Norfolk, Wayne (Mich.) and Twin Cities.

finishel at this time last year.

GM had six points working two shifts Saturday (Oct. 15). Working extra hours were: Doraville (Ga.), Flint (G line), Janesville (Wis.), Lordstown (O.), Norwood (O.) and Oklahoma City.

Working extra daily hours for Ford last week were Atlanta, Chicago, Dearborn, Lorain (O.) and Wayne (Mich.). Edison (N. J.) and St. Louis operated on Saturday.

Holiday trims Canada's output of cars, trucks

Estimated Canadian auto and truck production last week fell off from the previous week, as all plants were down last Monday (Oct. 10) in observance of the Thanksgiving holiday.

Car production last week was targeted at 15,551, an 18.04 percent drop from 18,972 units assembled the week before, but leading the year-ago week's output, 11,691, by 33.02 percent.

The truck makers estimate production of 10,579 last week, 6.96 percent behind the 11,370 units built the previous week, but 13.46 percent ahead of the 9,324 last year.

So far this year, there have been 750,059 cars completed in Canada, leading last year's output of 680,818 by 10.18 percent.

Year-to-date, the truck makers have finished 414,836 trucks, 4.69 percent more than 396,266 built at this time last year.

Chrysler Corp.'s Windsor (Ont.) facility began production of the Dodge Caravan, Mini Ram Van and Plymouth Voyager Oct. 7. The Chrysler truck total now includes these vehicles. It was estimated that 60 were built last week.

Ford Motor Co.'s St. Thomas (Ont.) facility is recalling its full work force of 3,200 today (Oct. 17) and tomorrow. The plant has been undergoing several weeks of retooling to add production of full-size Crown Victoria and Grand Marquis cars to the Escort/Lynx subcompacts already built there.

Production of the Grand Marquis at St. Thomas is scheduled to begin Oct. 24, and Crown Victoria output is slated to begin Nov. 7.

Chrysler had three facilities working daily overtime as well as two 8-hour Saturday shifts. Those points were Belvidere (Ill.), Jefferson (Detroit) and Newark (N. J.).

This week, GM's Tarrytown (N. Y.) and Willow Run (Mich.) points will begin two weeks of downtime because of a parts shortage. At Tarrytown, 1,800 workers are affected, while at Willow Run, there will be 4,700 on temporary layoff.

Seven Ford facilities are slated to work overtime this week. Working daily overtime are Atlanta, Chicago, Edison, Dearborn, Kansas City, Lorain and St. Louis. Three of those points — Chicago, Edison and Kansas City will also work Saturday (Oct. 22).

This week, Chrysler's Belvidere and Newark points will work two 9-hour daily shifts and the Jefferson facility will operate two 8½-hour daily shifts.

Chrysler offers 12.9 pct. loans, hikes incentive

HIGHLAND PARK, Mich. — Chrysler Corp. has joined domestic competitors in offering 12.9 percent financing and also has increased dealer payments under an existing cash incentive program.

Under its "Operation Clean Sweep," which runs through Oct. 31, dealers get $500 per front-drive New Yorker and Chrysler E-Class and Dodge 600 and 600 ES sold, effective Oct. 1. In September, they had received $300 per unit.

Meanwhile, Chrysler Financial Corp. is offering 12.9 percent APR financing from Oct. 4 to Oct. 31. Contracts can go to 48 months or longer.

All new '83/'84 cars and trucks are eligible. Dealers forfeit their entire finance reserve to participate.

The program follows similar ones by General Motors, Ford Motor and American Motors.

Nissan, Citicorp offer financing to N. Y. dealers

GARDENA, Calif. — Nissan Motor Acceptance Corp. and Citicorp Acceptance Co. have joined to offer a dealer-financing package in a third state, New York.

Dealers in Florida and Illinois have had the package available since spring. NMAC funds the wholesale financing and Citicorp funds retail financing, according to Robert Baker, NMAC president.

Nissan account representatives are based at Citicorp offices in the three states to handle dealers' financing needs. Financing is available on the Nissan line only; dealers with a second franchise don't have these other products covered.

NMAC offers both wholesale and retail financing in five other states: California, Oregon, Texas, Colorado and Washington.

The tieup with Citicorp provided "an opportunity to offer financial services to dealers on a more rapid basis" than if NMAC assumed full funding, Baker said.

Coach Builders chops BMW 633 and 635

Coach Builders Ltd., Inc., High Springs, Fla., has begun converting the BMW 633 and 635. These convertibles feature a fully padded insulated roof, color coordinated interior headliner, power-operated top system and the Coach Builders warranty on materials and craftsmanship. Conversion cost to dealers is $8,900.

X-car brakes worried GM before intro, documents show

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — General Motors documents released on court order detail how its own engineers knew of the tendency of the 1980 X-body car brakes to lock up for its own test drivers about two years before the start of production.

A GM Task Force in January, 1979, recommended design changes but stopped short of recommending delay on the start of production.

The government said its entire case against GM for failure to tell NHTSA of its tests, its findings, its running changes and its failure to correct in all aspects problems with brakes, rear and front, rests on GM's own documents.

Federal Judge Thomas P. Jackson ordered early release of almost all of the some 100,000 documents last week.

A GM spokesman said, "We are disappointed that our request to defer the unsealing of the principal documents in the X-car case was not granted.

"The government's case against GM and the X-cars is based on a distorted and one-sided analysis of the record. That exists only because NHTSA failed to follow its own procedures, denying GM the right to defend itself while unfair media publicity was directed against it.

"We had wanted the opportunity to release our position simultaneously with the government's accusations," the spokesman said. "We recognize we will have the opportunity to respond at a later time in court, but the material omissions and misstatements and the failure of the government to understand our internal documents and employes' testimony required us to make available a brief we have filed.

"We are confident a full airing of the facts will show that GM has acted properly in carrying out its safety responsibility. The substantive information in the government documents was taken into account by GM in its past decisions on the production of the X-car.

"Our brief shows why we felt it was necessary to put the government's mischaracterization of our documents and employes' testimony into proper context and perspective," the spokesman concluded.

GM, which had said that the press would misunderstand and tarnish GM's reputation if early release without its side of the story was granted, contends that the documents do not show that rear brake lockup is a safety-related defect and in fact, that other cars may have similar lockup experience — which, in fact, is a good situation sometimes.

• This is the first case the Reagan Administration has brought against an auto company over any alleged defect, and it is the first time that any auto company has been accused — with threat of a $4 million fine — of stonewalling and concealing data from the government.

NHTSA has been criticized by Rep. Tim Wirth, Colorado Democrat, of delay in forcing recall of the X-body cars with brake problems.

But NHTSA says this was GM's fault. Instead of proceeding administratively to force

Refusal to provide data said to put GM venture in jeopardy

Toyota stall perils deal, FTC says

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — In a letter, the FTC has told Toyota that its proposed joint venture with General Motors is jeopardized by Toyota's refusal to give staff investigators financial data.

The $300 million project would involve production of a new car in the Fremont (Calif.) plant, with Toyota managing the production and Chevrolet dealers selling the product.

The letter warns Toyota that its treatment by FTC will be no different than that accorded U. S. companies and it tells Congressmen that any delay in the decision is not the fault of the FTC.

The "one last chance" letter was sent after FTC rejected Toyota's offer to provide data through a third party without actually revealing the documents themselves.

Normally, this kind of cost data is extremely sensitive and all company officials are concerned lest the data be shared with Congressmen for their own "fishing" expeditions.

But in this case, the data is similar — if not identical — to what the Internal Revenue Service is asking from Toyota in a tax audit involving transfer pricing. Litigation is ongoing in California.

At issue is whether prices charged by the parent company to its U. S. distributors are set very high in order to minimize the parent's tax liability.

On another front, critics of the proposed joint venture took aim at FTC Chairman James C. Miller III, claiming that he should excuse himself from all trade commission matters involving GM.

Before Miller went to the FTC, he had his own small consulting firm. Between 1978 and 1980, GM was a client and GM paid him more than $50,000.

In a letter sent to Miller by Chrysler legal counsel Joseph A. Califano Jr., Chrysler asked Miller to disqualify himself from the joint venture proceeding. Califano said Miller's participation in the case would "leave a cloud of suspicion" over the final ruling.

Chrysler has indicated it will challenge a positive finding for the venture in court.

While Miller did recuse himself for two years from any decision involving GM, that period has now passed and he intends to vote on the GM-Toyota joint venture as well as the final decision involving GM transmissions, diesel problems and premature camshaft wear.

Miller's fellow trade commissioner Michael Pertschuk, who has often found himself at odds with the chairman, mentioned Miller's connection with GM in a speech here to the National Economists Club.

Pertschuk, apparently tongue-in-cheek, defended Miller's objectivity, saying, "I don't have the slightest doubt that his decision will be driven solely by

Reagan wants to limit Japan to 1.8 million

By Geoff Sundstrom
Washington Reporter

WASHINGTON. — President Reagan has decided to ask the Japanese Government for a fourth year of "voluntary" restraint on auto exports to the U. S. at a ceiling of 1,800,000 cars, sources say.

The decision was reached by Reagan last week after the Administration's trade policy committee failed to agree on the handling of the sensitive matter.

It is believed that the White House staff persuaded Reagan to take a relatively hard line with the Japanese, largely for political reasons, and to pressure the Nakasone government on a range of other sticky trade issues.

The Administration has prided itself on a normally strong free trade policy, but seems unwilling to back down to the Japanese in the face of a mushrooming trade deficit.

If agreed to by the Japanese, the new limit would take effect

GM recalling 479,700 vehicles

DETROIT.—General Motors is recalling 479,700 cars and trucks in four campaigns to correct brake and emission problems. The biggest involves 350,000 '83 front-wheel-drive X-cars, J-cars and A-cars to find 100,000 with improperly manufactured brake system valves. Also 13,000 '83 and '84 Chevrolet S-15 and GMC S-15 four-wheel-drive pickups are being recalled to find 3,000 which may have the right fender skirt contacting a brake pipe. Some 4,700 '83 rear-drive intermediate cars and Chevrolet El Camino and GMC Caballero diesel trucks will be checked for a brake pipe contacting an underhood bracket. Finally, 112,000 '79 Chevettes will be

Japanese autos from Puerto Rico joined Guam cars at U. S. outlets

By Kathleen Hamilton
and John A. Russell

More cracks are showing up in the wall keeping Japanese cars from flooding the U. S. market, but the market seems to be plugging some of the holes automatically.

AUTOMOTIVE NEWS has learned that several thousand cars made in Japan and destined for Puerto Rico ended up in U. S. dealerships late last year and early this year.

The source now has all but dried up as the Puerto Rican economy has picked up and Japanese cars have become as scarce there as they are on the mainland.

In addition, one source told AUTOMOTIVE NEWS less than 100 Hondas had been shipped this summer to Hawaiian dealers from Guam but that the shipments have since been halted.

Two Miami dealers are facing a civil class-action suit involving warranties on Hondas they allegedly brought from Guam (AUTOMOTIVE NEWS, Oct. 10). The suit claims the dealers imported 2,000 cars, but one of the dealers said the number was probably half that.

The warranty issue is a sticky one (although apparently solved for Puerto Rican Nissans and Toyotas). But a week of investigation by AUTOMOTIVE NEWS failed to turn up any other legal problems for those reselling the Japanese cars.

• For example, NHTSA said cars from Guam and Puerto Rico meet the same safety stan-

GM to spend $44 million in bias deal

By Marjorie Sorge
Labor Editor

General Motors will spend more than $44.4 million in the next five years to settle a 10-year-old discrimination suit.

The out-of-court settlement announced last week resolves a charge filed in 1973 by the then-commissioner of the Equal Employment Opportunity Commission, William H. Brown III, alleging that GM and the UAW discriminated against minorities and women in hiring, training and promotion practices. The agreement also settles the claims against the UAW.

Under the agreement, GM must spend $15 million over the next five years for educational endowments and scholarships aimed at providing education in engineering and technology for minorities and women currently employed at GM, including those on layoff. GM will disburse the funds at a rate of $3 million a year and workers can choose other areas of education besides engineering and technology.

In addition, the company is spending more than $21 million to increase opportunities for minorities and women at the supervisor, executive, preapprenticeship and salaried levels.

Another $4 million has been earmarked for settling outstanding charges and discrimination suits pending against GM. The remaining $4.4 million is for other education, training and hiring programs.

At the end of 1982, 17.5 percent of GM's workforce was made up of minorities and 17 percent was women, according to Alfred S. Warren Jr., vice president, industrial relations.

• As of the end of July, minorities made up 24.3 percent of the non-skilled hourly workforce while women represented 19.7 percent. In the journeyman category, minorities make up 6.4 percent and women 0.7 percent; among apprentices, minorities were 11.8 percent and women 13 percent, and in the employe in training category, minorities were 16 percent and women 3.4 percent.

In the salaried area, 11.9 percent were minorities and 23.6 percent were women.

Of the new workers hired in the non-skilled area in the next five years, GM hopes to hire 28 percent women.

While the dispute has been settled, both GM and the UAW disputed the validity of the charge and denied that any ac-

Registrations for Oklahoma not available since 1968.
Automotive News analysis of new-car registrations based on statistical reports from R. L. Polk & Co.
Imports included have been major importers throughout most of the timespan of the chart. Market shares are figured where significant.

Both nameplates have dropped drastically in market share since 1965

Import growth has hurt Chevy, Ford the most

By Jenny L. King
Staff Writer

A former Chevrolet dealer called recently from Pennsylvania to express his concern over the giant strides Japanese-built cars have taken in the U. S. market.

"Just look at the registration figures," he said. "Chevy used to have 25 percent of the industry. It looks like GM has put Chevrolet on the block, sacrificing it to the imports."

A chart featuring R. L. Polk & Co. registrations of the major U. S. and import makes from the late 1960s through the 1982 calendar year confirms his alarm. Chevrolet did in fact have more than a quarter of the market at one time — 26.03 percent in 1965. Last year its portion was 15.77 percent. Toyota wasn't even among the more important imports in 1966. It shows up in 1967 with a modest 0.40 percent and has grown every year except one since then.

Toyota's chief import competitor today, Nissan, has been a bit more erratic in its ascent, but likewise has grown from less than one percent of the market in 1965 to a comfortable 5.93 percent for the last calendar year.

Honda doesn't even show up until 1974. That year its sales represented 0.48 percent of the overall market. In less than 10 years, it climbed to 4.72 percent.

• Not only has Chevrolet suffered a dramatic slide, its long-time rival Ford has also been in a tailspin. In 1965, Ford had 21.46 percent of the market. Last year, it earned only 11.47 percent. Other U. S. makes offering lower-price cars — Plymouth, Dodge and Pontiac — have far less of the total than they held 18 years ago.

Volkswagen peaked in 1969 with 5.69 percent of the market. Last year its share had shriveled to 1.93 percent. American Motors had its best year in 1974. In 1982, without the support of Renault Alliance statistics (R. L. Polk separates them as imports), it was down to 1.08 percent, putting it between Lincoln (1.13 percent) and Volvo (0.94 percent).

In the nearly two decades, Buick, Cadillac, Lincoln and Oldsmobile have shown steady growth. Mercury has done all right, Chrysler has had its ups and downs. Total imported cars have gone from 6.30 percent in 1965 to 29.57 percent of the U. S. market in 1982.

Will seek arrangement with Japanese or European company if venture is OK'd

Chrysler eyes foreign links to fight GM-Toyota

By Marjorie Sorge
Labor Editor

WINDSOR, Ont. — Chrysler Corp may set up a three-legged-stool venture with auto companies in Japan and Europe to import small cars if the General Motors-Toyota joint venture is approved, according to M. J. (Moe) Closs, president of Chrysler of Canada, Ltd.

Closs said it is also possible that Chrysler would enter into a relationship with more than one Japanese company. Chrysler owns 15 percent of Mitsubishi and imported 100,000 cars and 33,000 trucks from the Japanese firm in 1982. It also has a 15 percent equity in Peugeot which has a "good small car in the 104," Closs said.

He also said an agreement with Volkswagen is a possibility. Chrysler recently bought VW's idle Sterling Heights (Mich.) plant.

"The only relationship I'm aware of in Japan is with Mitsubishi, but as this thing (GM-Toyota) progresses I wouldn't preclude any kind of an agreement, because then those companies in Japan who don't have a relationship might be forced to do it because of what's happening with GM and Toyota," he said. "The rules of the game change for them, too."

Although Chrysler doesn't want to get out of small-car production, GM may force the issue, Closs said.

"There's no choice if GM does what they are suggesting they are going to do," he said. "Not only Chrysler will do it, but Ford will do it and all of the manufacturers will. It will extend into Canada under the rules of Canada. Ultimately, if there are no quotas and anybody can bring in cars built in the lowest-cost countries, then that is where it is going to be."

• In an interview with Automotive News, Closs also said:

1. The Japanese have taken unfair advantage of the Canadian market, taking almost one-third of that market without making an investment in the country. Chrysler and the other domestic auto companies, along with the UAW, are lobbying in Ottawa for a Canadian content bill and an investment requirement. This group recently formed a task force which made these recommendations to the government.

2. Chrysler Canada has overtaken Ford for the number two sales position in Canada.

3. That Chrysler Corp.'s decision to delay the P-car (replacement for Omni/Horizon) for nine months wouldn't hurt the Canadian company. However, he said a lengthy delay could hurt if an import replacement isn't found and other manufacturers

Ford, Chrysler gain in owner satisfaction

By Kathleen Hamilton
Financial Editor

Ford Motor Co. and Chrysler Corp. are making real progress in car quality, but the U. S. industry still lags behind Europe and especially the Japanese auto makers in the number of problems on delivery of new cars, according to J. D. Powers & Associates.

In a recent newsletter, the California research firm reported Ford and Lincoln-Mercury were the only U. S. auto nameplates rated above average by new-car buyers. Their opinions were based on product quality, sales, service, maintenance, repairs and warranty work and parts availability.

Mercedes-Benz and Toyota took the first and second places, respectively, for the second straight year. Chrysler buyers were happier than General Motors buyers, and American Motors and Renault buyers were least satisfied.

Those polled had owned their 1982 models 12 to 14 months. AMC-Renault's major product, the Alliance, wasn't included.

The annual Power survey is one of the few independent analyses of quality and customer satisfaction in the auto industry.

When considering only problems on delivery, 50 percent of U. S.-made 1982 models, 45 percent of European cars and 34

59th year — No. 4992

AUTOMOTIVE NEWS (ISSN 0005-1551) is published weekly except semiweekly the fourth week in April and the third week in September at 965 E. Jefferson Avenue, Detroit, MI 48207. Second-class postage is paid at Detroit, MI and at additional mailing offices. Postmaster: Send address changes to AUTOMOTIVE NEWS, Circulation Dept., 740 Rush Street, Chicago, IL 60611.

Mercedes, Japanese makes lead customer satisfaction survey

Ford, Chrysler gain with owners

Continued from Page 3

percent of Japanese cars had problems, according to David Pulaski, senior research director.

"Ford has improved a remarkable 29 to 30 percent," Pulaski said. Chrysler-Plymouth, Dodge and Lincoln-Mercury showed "definite increases" in their quality as measured by delivery problems, Pulaski said. Declines at GM, however, brought down the U. S. average, he said.

The latest Power survey showed Ford with the fewest delivery problems: 39 percent of new cars had such problems. Lincoln-Mercury was right behind that figure, with 40 percent.

Other U. S. makes and percentages of problems on delivery: Chevrolet, 50 percent; Dodge, 51 percent; Cadillac, 52 percent; Pontiac and Chrysler-Plymouth, both 53 percent; Oldsmobile, 54 percent, and Buick, 56 percent.

Most delivery problems are either with the body or the engine, Pulaski said.

To some degree, Power's surveys measure how well dealers prep the cars they deliver. But Pulaski pointed out a chick-and-egg syndrome:

"When the factory has product quality under control, its dealerships can concentrate on providing good service because they are not overly occupied with problems arising from shoddily built vehicles. For Ford Division, service recommendations went from second-worst in the industry to above average."

Indeed, in independent surveys by AUTOMOTIVE NEWS, dealers for Ford and Chrysler regularly volunteer praise on the quality improvements they have witnessed in the last three years.

And in its recent Delphi III report, Arthur Andersen & Co. researchers polling vehicle makers and suppliers found the first group said Ford has made the most progress in quality since 1981. Suppliers said Chrysler has made the most progress.

Toyota had the lowest incidence of mechanical problems and recurring repair problems for the second year, according to the Power newsletter. Mercedes-Benz had the lowest rate of problems at delivery.

This is the third year the Power survey was conducted, and industrywide scores on consumer satisfaction have climbed each year. Overall, the industry was rated 9.5 percent higher than three years ago.

One of the biggest gains was recorded by Subaru, which climbed from fifth place to third, mainly on gains in parts availability and warranty work done by its dealers' service departments.

Isuzu fell from the No. 7 spot to No. 20, mainly because of delivery problems and dissatisfaction with servicing, according to the Power newsletter.

A mitigating factor cited by Pulaski in Isuzu's case was the problem caused by trying to start up the Isuzu organization while supplies are reduced by quotas. Discouraged dealers may not stress service, he said.

GM's low scores were attributed primarily to product problems.

"Product quality and poor dealer servicing complaints plague Pontiac," according to the newsletter. "Buick's major problem seems to be delivery defects, and Cadillac's biggest hurdle is recurring repair problems.

"Standards of repair are a particular problem for Chevrolet. And, while Oldsmobile has a closer-to-average overall rating and enjoys strong owner loyalty, it, too, has product and service problems to surmount."

Oldsmobile rated highest among the GM divisions in the Customer Satisfaction Index, followed by Chevrolet, Cadillac, Buick and Pontiac.

Whether these ratings will stay in that order when owners of 1983 models are surveyed is another question.

One GM insider pointed to Pontiac's build-em-right-or-not-at-all edict at the Fiero plant as evidence of a change there. Internal audits show the corporation's overall product quality has been improving for the last three years, he said.

Officially, a spokesman said GM would not comment on the Power survey because "GM does not know the methodology" Power uses.

Only a handful of independent quality auditors exist in the auto industry. One of the most prestigious of these is the Toledo-based Rogers National Research, which provides data for makers' internal use.

AMC said a Rogers study this summer indicated 82 percent of Alliance customers were either "very satisfied" or "completely satisfied" with their cars, compared with an industry average in the 60s.

A spring survey by Popular Mechanix, in which 90 percent of Alliance owners said they would buy that car again, was also cited as evidence of the change at AMC-Renault.

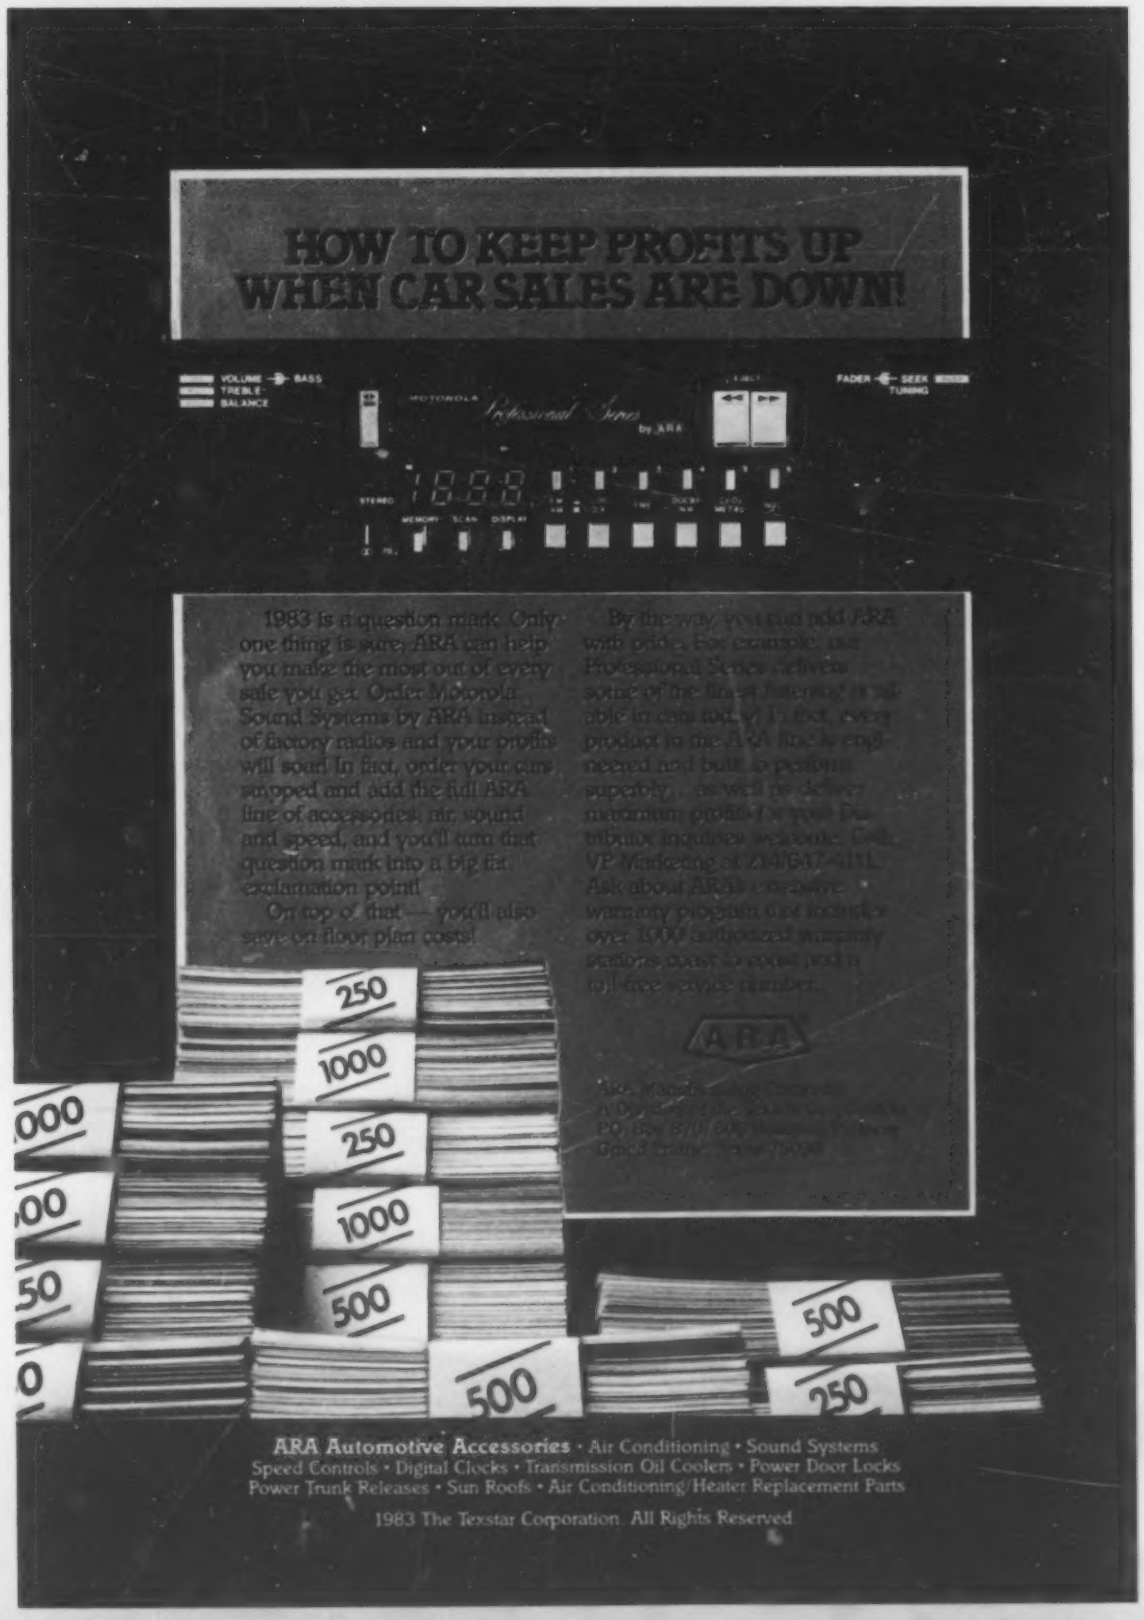
The Power study said AMC had been given low marks for service and product problems; Renault was faulted by buyers for servicing, parts availability and delivery problems.

Ford President Donald Petersen said the Power study confirmed what Ford people had been seeing internally. He predicted another jump for Ford products in 1983, saying Ford's ultimate goal is the No. 1 spot.

But a spokesman for Ford declined to talk about the study by the Southfield (Mich.) based research firm, Product and Consumer Evaluations (PACE). Ford had based its advertising claims of quality leadership among domestic cars on PACE's study of new-car delivery problems.

Chrysler challenged the ads, saying it has the best recall record.

One Ford insider said Ford statistics show it has had no declines in quality on any lines in any quarter during the last year.



GM settles bias lawsuit

Continued from Page 1

tions violated the equal rights laws. According to the union, the settlement recognizes these denials and has never established any violations of the Civil Rights Act on the union's part.

The UAW has no financial obligation under the agreement. According to Donald F. Ephlin, UAW vice president and director of the GM department, the agreement is aimed mainly toward salaried and supervisory personnel. He said the plan does not affect the national and local collective bargaining agreements.

Registrations in August up 32 pct. over '82

August registrations of new trucks of all types in the U. S. were significantly higher than those in the year-earlier comparable month, with gains in two of the three market segments and only a small decline in the third.

During the month, according to R. L. Polk & Co. statistics, 253,939 vehicles were registered, an increase of 31.8 percent over last year's 192,666 units. It was the fourth month in a row in which the count has topped 250,000.

The eight-month total was up 17.8 percent to 1,877,947 units, compared with 1,593,735 in the same period in 1982. Again, there were increases this year in two of the three market segments.

During the month, 238,374 light trucks were registered, an increase of 34.8 percent over last year's 176,872. Mediums totaled 5,800 units, up 2.3 percent over the year-earlier 5,668, while the heavies were off only 3.6 percent, from 10,126 units in 1968 to 9,765.

The light-truck count for the first eight months was up 19.8 percent to 1,770,224 units, compared with 1,477,157 a year ago. Mediums climbed to 29,343 units, 3.1 percent higher than the year-earlier 28,470. Heavies were down 11 percent, from 88,-108 in 1972 to 78,380.

• No. 1 Ford accounted for 31.63 percent of the industry total with 594,009 registrations, an increase of 1.22 percentage points over the year-earlier 484,579, good for 30.41 percent.

Chevrolet was the biggest

Exterior trunk for van conversions

An exterior rear trunk, large enough to hold two sets of golf clubs or the family's luggage, has been introduced by Sterling Systems, Ltd., Union, Mich., for converted Chevrolet and GMC vans. It includes an extended bumper and shroud cover, and is attached to the right-hand door, which still opens in the conventional manner for access to the rear seating area.

Big sales, profits gains reported by Champion

DRYDEN, Mich. — Champion Home Builders Co. reported sharp increases in both sales and profits for its second quarter ended Aug. 26.

Joseph J. Morris, president, said total sales and revenues for the three-month period amounted to approximately $92.5 million, an increase of 36 percent over last year's $67.9 million.

Net profit for the quarter was up 164 percent to approximately $2.2 million, he added, compared with $834,000 a year ago.

For the first six months of the fiscal year, sales and revenues soared to about $178 million, an increase of 23 percent over the $145.3 million achieved in the like period last year.

First-half net profit amounted to almost $4.8 million, up 14.3 percent over the year-ago $4.2 million.

Morris said earnings in last year's first half included a tax credit or $653,000, resulting from utilization of an operating loss carryforward plus an investment tax carryforward of $521,-000.

Excluding the effects of these tax credits, he explained, net income for the first half of the current fiscal year was 57 percent higher than last year.

Morris attributed the improved performance primarily to increased factory shipments of manufactured homes, which rose 26 percent over the same quarter last year.

Unit shipments of the company's larger double-section homes, he noted, were up 55 percent over 1982.

"Current unit shipments are order backlogs for our company's manufactured homes and motor homes, as well as a continuing high demand for these product lines industrywide," he said, "indicate that favorable quarterly comparisons should continue for the last half of our current fiscal year."

For its second quarter, Champion's dollar sales of manufactured homes, representing 86 percent of total revenues, increased 41 percent to about $80 million, compared with about $56 million for the year-ago second quarter.

Unit shipments of the vehicles for the quarter were 448, an increase of 11 percent, from 405 units for the year-earlier second quarter.

HD registrations for eight months down 11 percent

Eight-month registrations of new heavy-trucks in the U. S. totaled 78,380 units, a decline of 11 percent from last year's 88,-108, according to R. L. Polk & Co. statistics.

For August, the count was 9,-765 units, down 3.6 percent from the 10,126 registered in the same month a year ago.

Tallies were lower this year for both the month and the

August RV shipments top year ago and July

Shipments of recreation vehicles in August by manufacturers to retail outlets were up significantly over the same month in 1982 and slightly higher than in July.

During the month, according to the Recreation Vehicle Industry Assn., member/manufacturers delivered approximately 30,-300 units of all types, an increase of 37.1 percent over last year's 22,100.

The August count also was 5.2 percent higher than the 28,800 vehicles shipped in July.

"This is only the fourth time in 15 years that sales have increased from July to August, traditionally a 'cooling-down' period for the industry," an RVIA spokesman said.

Eight-month shipments climed to approximately 248,800 units, a gain of 37.8 percent over the year-earlier 180,700, with impressive advances in all types of vehicles.

The Index of Consumer Sentiment in August was 90.9, slightly lower than July's 93.9 but well above the 65.4 recorded in August, 1982.

• Declining unemployment was offset by increased concerns in the August survey ov r rising interest rates, according to Richard Curtin, survey director.

"The one-month decline in consumer sentiment does not itself signal a change in the prevailing optimism among American consumers," he explained. "It does demonstrate the heightened sensitivity of consumers to interest-rate trends.

"These data thus indicate that

RVIA plans to stage '86 show in Atlanta

CHANTILLY, Va. — Recreation Vehicle Industry Assn. is working out the final details of a contract with the Georgia World Congress Center in Atlanta, to move the 24th annual national RV show to Atlanta in 1986. Negotiations have been underway since May.

The annual show has been held at the Kentucky Exposition Center in Louisville for the last 19 years and will be held there through 1985. The move to Atlanta will offer exhibitors more space, said Dennis Corcoran, director of RVIA's Shows and Membership Department.

Seminars slated for RV dealers at Louisville show

CHANTILLY, Va. — Four informational seminars and one motivational seminar will be conducted for dealers at Recreation Vehicle Industry Assn.'s 21st annual national RV show Nov. 29-Dec. 2 at the Kentucky Exposition Center in Louisville.

The four information seminars will feature expert speakers on advertising and promotion; rentals, parts and accessories, and towing.

The advertising and promotion seminar will be held Tuesday (Nov. 29) at noon, rentals on Wednesday (Nov. 30) at noon, and parts and accessories on Thursday (Dec. 1) at noon.

The towing seminar will be held on three days at 3 p.m., with Chevrolet conducting it on Tuesday, Ford on Wednesday and Chrysler on Thursday.

The motivational seminar/breakfast is scheduled Thursday, Dec. 3, at 8 a.m. Featured speaker Don Hutson will talk about successful salesmanship and leadership techniques.

A sixth seminar, designed exclusively for loan officers, is scheduled Wednesday Nov. 30) at 1 p.m. at the Executive West Hotel. Dr. William Freund, senior vice president and chief economist of the New York Stock Exchange, will be the featured speaker.

"The lenders program is designed entirely for lenders, to provide them with information and insight into the profit opportunities the RV industry presents to the lending community," said Robert L. Berner, Citicorp vice president and chairman of RVIA's Finance Committee.

Supercab for compact trucks

Galaxie Corp., Bristol, Ind., has introduced its new Cab-Hi Supercab, an all-fiberglass top for imported or domestic compact trucks. It has two locking handles, gas props and stainless-steel hinges.

Vialle, a Dutch company, has U. S. subsidiary

Volvo unit acquires propane firm

By Matt DeLorenzo
Los Angeles Reporter

GARDEN GROVE, Calif. — Vialle B.V., Europe's largest supplier of propane carburetion equipment, has been acquired by a subsidiary of Volvo B.V., according to officials of Vialle's U. S. subsidiary headquartered here.

Jeff Stern, vice president of Vialle-USA, said his company's parent, Vialle B.V., of Eindhoven, Holland, "has been acquired by Car Finance International, a subsidiary of Volvo B.V."

Volvo B.V. is 30 percent owned by AB Volvo, however, according to Stern, there will be no direct influence on the day-to-day operations of Vialle by either company and there is no relationship between Vialle-USA and Volvo of America.

Stern said that the acquisition, however, lends credibility to propane as an alternate fuel source. In Europe, Vialle supplies 50 percent of the propane carburetion systems in use.

Ad Van Vroenhoven, managing director of Vialle B.V., said in a telephone interview that the acquisition of Vialle by Volvo B.V. "fits in with the strategic plans" of the new parent.

"Volvo is looking at all kinds of energy-related activities," Vroenhoven said.

The European company is working with 21 manufacturers there to fit various models with the Vialle carburetion system, which has the capability of using either propane or gasoline.

Vroenhoven said that while Vialle will work with its new parent on automotive applications, it will be important to maintain autonomy from Volvo in order to maintain the contracts it has with other manufacturers.

• While Vialle is well-established in Europe, the U. S. subsidiary is still building, using the fleet business as a starting point. "It is our intention to establish a 30 percent market share in the U. S. by the end of 1984," Stern said of Vialle's goal in the propane field.

Stern said one reason propane growth has been slower in the U. S. than in Europe is the lack of a retail distribution system similar to that for gasoline or diesel. Consequently, Stern said the school bus, taxi and commercial fleet market is the logical place to start.

"There are about 150,000 service stations in the U. S. and only 6,000 propane," Stern said. "So we're looking at return-base fleets."

A program called the Vialle Challenge has been set up to compare costs of gasoline versus propane power. Although propane does not deliver the same power or fuel economy as gasoline, Stern said the tradeoffs in better drivability, reduced engine maintenance and elimination of fuel pilferage more than compensate for the transition.

In addition to the Challenge, Vialle has developed a leasing package tailored specifically to schoolbus operators who do not have the capital to purchase a system outright. The package includes the carburetion system as well as on-site storage tanks and fueling facilities.

Another boost was given to Vialle's fleet program when Crown Division of the Allen Group signed on as an installer of Vialle propane systems.

Crown, which works closely with auto manufacturers, can pull units off the production line, install the propane system and reinsert the vehicle into the manufacturer's distribution pipeline. It is a first step toward developing an OEM program, according to Stern.

GM gives $100,000 to Hall of Fame

MIDLAND, Mich.—The General Motors Foundation has approved a contribution of $100,000 to the expansion fund of the Automotive Hall of Fame, Inc., according to Drex D. Minshall, hall of fame president.

Ground was broken for the expansion late in September. Construction is scheduled to begin next spring with completion slated for late in 1984 or early in 1985.

Minshall said the GM pledge, plus pledges and contributions previously received, brings the Hall of Fame fund drive to one-half of its goal of $2.5 million. The money will be used for expansion of the Hall of Fame, its library, space for memorabilia and continuation of educational programs.

loser in penetration in the January-August period. Its share was off 1.05 points to 30.51 percent on 573,010 registrations. At the same time in 1982, Chevrolet was the leader with 502,998 tallies, which accounted for 31.56 percent of the total.

Import tallies were up sharply in the first eight months, enabling the miscellaneous group to achieve the biggest increase in market share.

Through August, the miscellaneous group had 275,176 registrations, good for 14.65 percent of the total. The count was 1.46 points higher than last year's 13.19 percent on 210,281 tallies.

More money on fewer cars

Restrictions, downturns don't stop Japan

By Kathleen Hamilton
Financial Editor

Despite import restrictions throughout most Western developed nations and severe economic downturns in the auto markets of less-developed nations, Japan's auto industry is finding it can make more money on fewer cars.

The low value of the yen compared to the dollar has been a boon for Japan's motor vehicle manufacturers. Richer model mixes and higher prices — both possible because of volume restrictions — also have padded profits.

New products and manufacturing cost-cutting also have contributed to what amounted to a good year for the industry.

Now that the world economy, led by Japan's biggest automotive export market, the U.S., is moving into a recovery phase, the short-term outlook is bright for Japan's auto makers.

The auto industry is still viewed as stagnant by many of Japan's stock market watchers. To the contrary, several makers are proving to be true growth opportunities, according to Mori Matsumoto, vice president — institutional sales of Yamaichi International (America) Inc., New York-based unit of one of the major Japanese securities firms.

Matsumoto is particularly bullish on Toyota, by virtue of its potential tieup with General Motors for U.S. production, and Honda, because it is the sole Japanese maker now able to expand its U.S. share beyond the quota limit with its Ohio-assembled Accords. Honda is also allowed into restricted European markets through a joint venture with BL P.L.C.

With decisions imminent on both the 1984-1985 quotas by the Japanese government and on the GM-Toyota venture by the FTC, auto stocks could prove to be Japan's most active issue this month and next, Matsumoto said.

Growth in stock prices is even more important in Tokyo than in the U.S., where low-growth stocks frequently attract investors with comparatively high dividends.

With the exception of Mitsubishi, all of Japan's major auto makers — Toyota, Nissan, Honda, Toyo Kogyo (Mazda), Fuji Heavy Industries (Subaru), Suzuki and Isuzu — are publicly traded in Japan, Matsumoto said. Stock for Mitsubishi's auto operations is held by the parent company, he said.

In the U.S., only the stock of Toyota, Nissan and Honda are traded on the New York Stock Exchange, through American Depository Receipts. Subaru of America, Fuji's U.S. importer, is a publicly held corporation traded over the counter.

• The Japanese economy has grown at an annual rate of about three percent during the 1980s, according to Hisao Kanamori, president of The Japan Economic Research Center, a private research group.

Kanamori, formerly an economic advisor to the prime minister, is more optimistic than many about the country's growth prospects for the rest of the decade.

Challenging a government forecast of four percent annual growth for the rest of the period, Kanamori predicted the rate could be closer to five percent with what he sees as a liklihood of stable oil prices.

The Japanese home market for automobiles, although mature, is likely to continue to grow, according to most analysts.

The latest Automotive News World Forecast, generated by Data Resources Inc., calls for two percent growth in car registrations over the period, with the biggest jump coming in 1984, when the Japanese car market is expected to expand 5.3 percent from an estimated 7.0 million units to 7.4 million.

In its annual report to stockholders, Toyota forecast its fiscal-year sales in its domestic market would rise 5.4 percent to 1.63 million vehicles. (Its fiscal year runs from July to June.) In the late 1980s, it plans to sell 2 million a year, according to Daiwa Securities Co. Ltd., another major Japanese securities firm with U.S. offices.

On the other hand, Toyota sees exports remaining flat next year, a trend economist Kanamori said could last through the decade.

Trade restraints are part of the cause for a slow growth rate in exports, but Japanese makers' strong ties to the world economy also contribute.

Attempts to expand their sales in oil-producing markets have

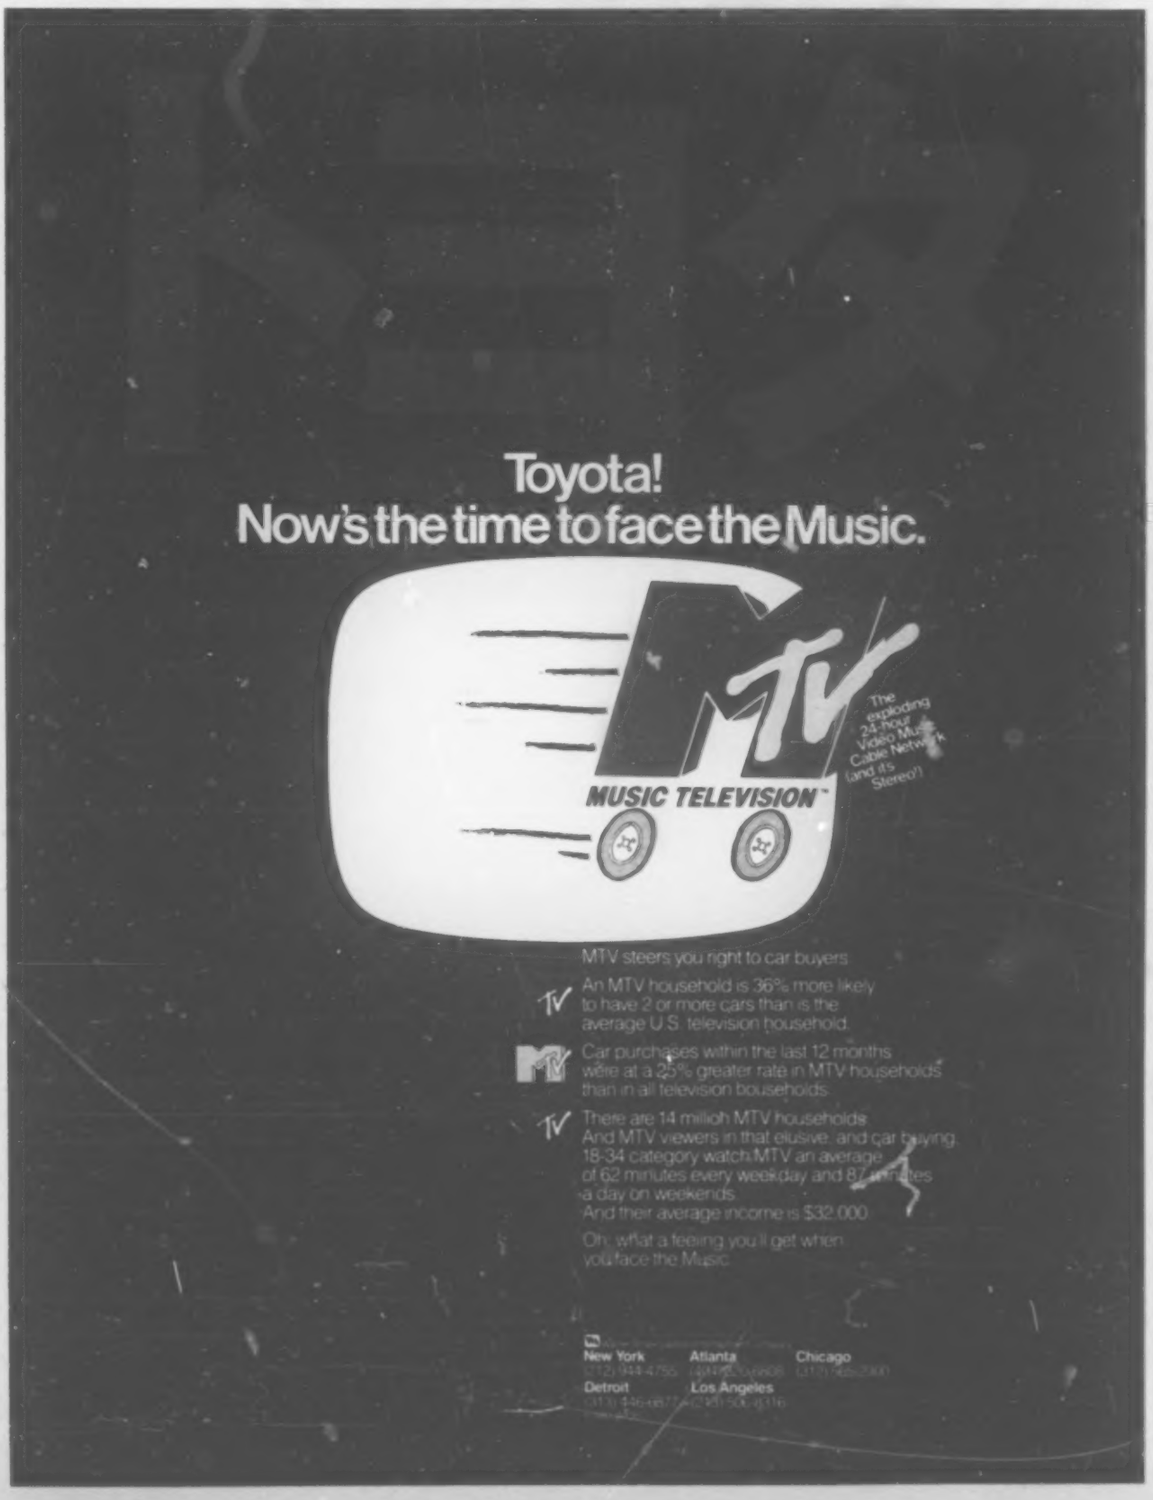
Dollar figures translated at 240 yen equal $1.00.



run afoul as oil revenues dried up, taking with them the demand for their products in developed countries and by high interest payments on heavy debt, are also in no mood to buy automobiles.

The developing nations will not feel the effects of the recovery in the U.S. in 1984, according to a new analysis by Predicasts Inc., Cleveland-based research firm.

Predicasts predicted most of Latin America, all of Europe and Oceania will trail growth in the world economy through 1987.

Japanese auto makers had been aiming much of their hopes for future growth in the less-developed nations. These plans may have to be re-examined, especially in light of emerging competition from Korea and China, both expected to be high-growth economies.

• Because the Japanese auto industry is so export-oriented, it has benefited from the low value of the yen. Japan's Big Four auto manufacturers all make more than half their vehicle sales from exports.

Toyota sells 51 percent of its vehicles abroad, representing 46 percent of its yen sales; Nissan, 54 percent of unit sales and 36 percent of yen sales; Honda, 64 percent of vehicle sales and 68 percent of yen sales; and Mazda's maker, Toyo Kogyo, 69 percent of vehicle sales.

Almost 38 percent of Japan's car, truck and bus exports ended up in the U.S. in 1982, according to the Japan Automobile Mfgrs. Assn.

With those kinds of export levels, currency valuations become major factors in the profit picture.

The yen is hovering at about 233 per U.S. dollar now, down from about 277 per dollar one year ago. Nevertheless, buying parity is about 200 yen per dollar, according to economist Kanamori. He expects the yen to slip to about 220 per dollar by the end of the year.

Even that would be no problem, said Matsumota, the securities analyst.

"Japanese car prices here are more than 20 percent higher than prices of comparable cars in Japan," he said.

Hondas, for example, are bringing $600 to $1,000 over list price in New York, he said. It wouldn't cause any problem if the factory took a portion of that, he said.

For every 10 percent decline in the yen's value, Japanese auto makers have to raise prices only 6.5 percent to break even, Matsumoto said.

The yen has increased in value in some European nations during the year, slicing Japanese profits from those sales.

But few analysts believe the U.S. dollar's value is likely to increase significantly. Lofty U.S. government debt is likely to keep interest rates in the U.S. high for at least the short term.

That makes the U.S. an attractive haven for investors from all over the world, and their investments are likely to keep the dollar's value high.

• Best guesses at this time are that Japanese "voluntary" or involuntary quotas will remain in some fashion throughout much of the auto-producing nations of the world.

Canada has just negotiated a decrease in its quotas. The European car-producing nations can be expected to keep Japanese imports at about their current levels, although inroads are being made through tieups with Motor Iberica (Spain), BL P.L.C. (Great Britain) and Alfa Romeo (Italy).

The Japanese are expected to announce a higher level of car quotas for the U.S. before President Reagan visits Japan next month. But at this point the outcome of any decision is speculative.

"Maybe the number will be close to two million units," Matsumoto said. "GM and Ford would like to increase their imports (with partners Isuzu and Suzuki for GM and Toyo Kogyo for Ford). I don't know how much the increase will be for the pure importers — Honda, Toyota, Nissan — maybe 10 percent."

Economist Kanamori said the Japanese auto industry should start concentrating on exporting parts, not cars, in light of the restraints.

"The quotas proved to be not as bad as expected because of price increases and the exchange rate," he said. The negative effects of restraints have been in the Japanese labor force and in prices paid by U.S. car buyers, he said.

Nissan appointment

CARSON, Calif. — John Borgen has been promoted to import director at Nissan U.S.A. He will be responsible for forecasting and ordering all vehicles for the company. Borgen formerly was Norfolk regional sales manager.

In other changes, Gene Quinn becomes director of port operations and transportation, responsible for vehicle movement from Japan and Smyrna, Tenn., to dealers, and Gary Holland has been appointed director of distribution.

Subaru dividends climb

PENNSAUKEN, N. J. — Subaru of America Inc. directors have declared a quarterly cash dividend of 31 cents per common share, payable Dec. 31 to stockholders of record Nov. 25. The company has declared dividends of 77 cents in the first three quarters of its fiscal year; for all of fiscal 1982, its dividends totaled 52 cents.

SUBARU INTRODUCES TURBO-TRACTION.™

**THE EXTRA POWER OF TURBO/FUEL INJECTION.
THE EXTRA TRACTION OF ON DEMAND 4WD.™
THE EXTRA CONVENIENCE OF AUTOMATIC TRANSMISSION.**

With a good deal of pride and logic, Subaru presents a new kind of automobile. With pride because Turbo-Traction is totally unique. With logic because what good is more power without more traction?

With the extra power and extra traction of Turbo-Traction, passing a long tractor-trailer in the pouring rain, for instance, is a lot easier on your nerves.

ONCE AGAIN, TO KNOW WHERE CARS ARE GOING IN THE FUTURE, LOOK AT SUBARU NOW.

Back in '69, Subaru was alone in introducing a full line of front wheel drive cars. In '75, when we introduced On Demand Four Wheel Drive, we were alone. Last year we introduced automatic transmission in our four wheel drive. And now, with Turbo-Traction, we're again making the tracks for others to follow.

ADVANCED ENGINEERING THAT DOESN'T LEAVE OUT TRADITIONAL SUBARU VALUE.

If you know Subaru, our durability and reliability need no introduction. Nor our kind of mileage: 24 EPA est. mpg, 30 est. hwy.* Nor our long list of standard features and luxury options. Best of all, the Turbo-Traction Station Wagon is just $10,174** and the Turbo-Traction Brat is just $9,949.** They're the only two models we're offering with Turbo-Traction.

For now.

**SUBARU.
INEXPENSIVE. AND BUILT TO STAY THAT WAY.**

*1983 EPA ESTIMATES FOR OUR TURBO 4WD BRAT AND STATION WAGON. USE EST. MPG. FOR COMPARISONS. YOUR ACTUAL MILEAGE WILL PROBABLY BE LESS.
**SUGGESTED RETAIL PRICES. DEALER'S ACTUAL PRICE MAY VARY. PRICES DO NOT INCLUDE DEALER PREP, INLAND TRANSPORTATION, TAXES, LICENSE, AND TITLE FEES. CERTAIN ITEMS SHOWN OPTIONAL AT EXTRA COST.

Canada's content war

Outcome will shape industry's future

By Marjorie Sorge
Labor Editor

A content war is blazing in the Canadian theater.

Japanese manufacturers and their dealers are squaring off against domestic manufacturers and the UAW, knowing the outcome will shape the future of Canada's automotive industry.

The conflict, which has simmered for a number of years, was brought to a head earlier this year after a Federal Task Force on Canadian Motor Vehicle and Automotive Parts Industries made a recommendation calling for 60 percent local content by 1987.

The task force also recommended that corporations with over 28,000 vehicle sales annually not only have 60 percent Canadian content but also make arrangements to build cars in Canada at the same level they are selling them — a relationship similar to the U.S.-Canadian Auto Pact, under which companies selling in Canada are required to build as many cars in Canada as they sell; the cars, however, are not necessarily destined for the Canadian market.

"We don't suggest that if the Japanese don't meet these regulations they would be allowed to pay a tariff and stay in because they would eat that with no problem at all," says Robert White, UAW vice president and director of the Canadian region, who co-chaired the task force. "We are really saying those are the rules of access to our marketplace."

The recommendations are now being studied at Ottawa with a decision expected before the end of this year. Both sides are lobbying heavily to sway the outcome.

According to Tom Buchanan, executive director of The Canadian Assn. of Japanese Automobile Dealers (CAJAD), many dealers are afraid some Japanese manufacturers will pull out of Canada if forced to assemble there. They also see a massive jump in car prices.

In a recently published story, Robert Attrell, president of CAJAD, said Canada's leading Japanese car importers, Toyota Canada Inc. and Nissan Automobile Co. (Canada) Ltd. would have to pull out of the Canadian market if the recommendations are accepted.

White disagrees with this scenario. "They aren't going to write off this very lucrative market. The real test here is whether or not the Canadian government has the guts to act —that's the test," he said.

The CAJAD is also worried that the recommendations would cause a surge in prices. For example, a $9,000 Japanese import could jump to $13,500 if it was Canadian-made with 60 percent Canadian content, Buchanan said.

White said he believes these figures are too high.

Domestic manufacturers see a massive loss of jobs without content legislation and a massive job increase with them. According to White, if the Canadian government doesn't take action, 80,000 jobs could be effected, 40,000 jobs lost without the recommendations and a gain of 40,000 if they are accepted.

Buchanan, on the other hand, said the recommendations would result in a net loss of jobs. The new employment estimate is a "ludicrous figure," he said.

According to Buchanan, the 937 Japanese dealers in Canada have lost 5,000 of their 12,500 workers since restraints were initiated in 1980. Under the import restraint formula which began in 1981 the Japanese were allowed to import only enough cars to allow them to maintain the current percentage of the market they had in 1980. Those restraints are due to expire in March 1984.

From April, 1983 to March, 1984 that amounts to 153,000, all of which are pre-sold, Buchanan said, with another 15,000 on back order, proving customers would rather wait for Japanese products than turn to domestic makes.

Other task force recommendations include:

1. Corporations selling less than 3,000 vehicles a year will be excluded from the regulations but face the current tariff and duty-remission options. Those with 3,001 to 28,000 sales should meet a content provision providing for 10 percent content plus an additional 2 percent for each 1,000 units over 3,000.

2. By 1987 the minimum level of Canadian commitment should be increased for all corporations selling in Canada — even those covered under the Auto Pact.

3. Recommendations for companies with over 3,000 sales not covered under the Auto Pact would be phased-in over three years with no legislated content in 1984 but continued import restraints. By 1985 content should increase to 10 percent, plus one-half percent for each 1,000 units over 3,000, plus continued overall import restraint, and for 1986 10 percent content, plus 1 percent for each 1,000 units over 3,000, plus continued overall import restraints.

4. The federal sales tax would be levied on all vehicles sold in Canada on the basis of purchase price paid by the dealer. It also suggests dropping that tax from 9 to 8 percent. The task force maintains that offshore imports enjoy a $100 to $200 tax advantage over Canadian-produced vehicles because the tax is levied on imports before everything is made ready at the dealer level.

5. The preferential tariff treatment for developing nations would be limited to two-thirds of the Most Favored Nations tariff rate for automotive goods.

Canada currently gives preferential tariff treatment to less developed nations — two-thirds of the Most Favored Nation rate of duty or the British Preferential Rate, whichever is lower, the report said. The British rate is zero for automotive products, so all eligible nations may export vehicles and parts to Canada duty-free, allowing companies such as Mercedes-Benz to import trucks duty-free from Brazil. It will also allow import of the new subcompact Hyundai Pony from Korea duty-free.

CAJAD is worried about the Pony competition. The Korean car will go on sale for less than $6,000 late this year. "We have gone to the Canadian Ministers but they said the numbers are so small, forget about it," Buchanan said. "They said the same thing about the Japanese 15 years ago."

But the task force report basically is limited to conquering competition from major Japanese importers.

"What the task force report really says is that we are currently operating under an automotive trade agreement with the U.S. that has some built-in protection for Canada — an assembly to sales ratio — and has some levels of commitment to Canadian content; for free access to the Canadian market you have to meet those obligations," White said. "We are now turning to those other companies which are now operating in the Canadian market, particularly the Japanese, and saying that the rules we have with U.S. producers are the same rules we have with others. We put a step-by-step procedure in place that would require them to meet a Canadian content level of at least 60 percent. After reaching a certain percentage of the car market, they then have to meet an assembly-to-sales ratio. This is the way we have treated everybody else here."

A major point of the task force recommendation is to insure Canadian firms a percentage of parts manufacturing. According to White, the Japanese purchase $10 million worth of parts from Canada out of $1.5 billion worth of cars, trucks and parts it shipped.

Buchanan says the Japanese are willing to get their parts from Canada, but Canadian manufacturers cannot meet the criteria of quality, on-time delivery and price. He said Japanese auto makers held a seminar in Toronto last year for Canadian parts manufacturers, but few attended. At the meeting, representatives of Canadian parts companies got information on how to obtain orders from the Japanese; but when the time came to approach the Japanese auto makers to make sales, few did so.

The task force report disputes the CAJAD assumption that Canadian parts manufacturers cannot meet the Japanese criteria.

The report said automotive productivity and quality improvements in Canada are equal to or better than those of similar plants in the U.S., but still are lower than Japanese plants. It also said Canadians currently have a parts network that would act as a springboard for further product development. Those manufacturers have already captured 60 percent of the U.S. import market for 1982 in interior trim, sealed beam headlights, radiators, wheels, springs and suspension parts, brakes and brake parts, mufflers and tailpipes.

Although the U.S. has solved some of its problems with Japan, moves by Japanese companies to build vehicles in the U.S. cause problems for Canada, White says. For example, when Nissan built a new truck-making plant in Smyrna, Tenn., it brought over many of its Japanese suppliers, locating them closeby.

"That takes a piece of the U.S. market," White said. "Before that the U.S. market was serviced by North American vehicle manufacturers, and we would get a share of the parts production. With the Japanese taking that piece out of the U.S., it is a smaller market for us to get a piece of."

Another basic concern of CAJAD is that the Japanese will retaliate against other sectors of the Canadian economy such as the lumber business, by purchasing less.

However, the report takes a stand that the Japanese "buy our resources because it is in their best interest to do so. Why would they penalize themselves by buying higher-priced resources of lower quality from others?"

Many critics of the task force indicate Japan could buy resources from Australia. But according to the report, Australia has a tighter content legislation than that being suggested in Canada.

The report further asserts that over 30 countries have limited Japanese imports, and Japan has not retaliated.

Buchanan maintains that Canada's auto industry is regional, limited mostly to Ontario. Other provinces that sell resources to the Japanese fear retaliation against their business.

Canada's export of resources shows an overall trade surplus with Japan, but auto industry officials want to change the mix of exported resources and imported manufactured goods. According to the report, acceptance of the recommendations could help Canadian provinces that don't have automotive ties. It said content legislation will encourage the creation of facilities in Eastern and Western Canada. It is likely Japanese companies forced to source in Canada would build facilities in British Columbia for export to Japan or California, the report said.

The report maintains that export to California is likely, especially if the proposed General Motors-Toyota joint venture to build small cars starting in the 1986 model year is approved by the FTC.

Although a decision on the Canadian-Japanese issue is expected by year-end, the skirmish will go on. One problem facing the domestic industry is a recent turnaround in the vehicle market. Of Canada's Big Three auto makers, only Chrysler made a profit in 1982 — $16.8 million on sales of $3.6 billion. Ford lost $108 million on sales of $7.3 billion. GM lost $71.7 million on sales of $9.5 billion.

With sales improving, it is likely the Big Three will all show profits in 1983. CAJAD is hopeful the profit turnaround will work in its favor.

"The domestic business is booming," said Buchanan. "So what's the problem? We were initially told domestic companies needed breathing room; they've breathed enough."

Members of the task force included White; Patrick J. Lavelle, president, Automotive Parts Manufacturers' Assn. of Canada; Moe Closs, president, Chrysler Canada Ltd.; James Dykes, president, Motor Vehicle Manufacturers' Assn.; Sam Gindin, director of research for Canada, UAW; Donald E. Hackworth, president, General Motors of Canada Ltd.; Kenneth W. Harrigan, president, Ford Motor Co. of Canada Ltd.; and Douglas L. Sedgwick, vice president-planning, Magna International Inc.

ACTUAL CANADAIAN VALUE ADDED AS A PERCENTAGE OF SALES COMPARED TO CVA COMMITMENTS OF ALL AUTO PACT PRODUCERS (1974-1982)

(Canadian $ millions)

Toyo Kogyo profits up

LOS ANGELES. — Toyo Kogyo Co. Ltd. reported its operating revenue rose 13 percent to a record $2.81 billion in the first half of its fiscal year.

Ordinary before-tax income for the period ended April 30 also set a first-half record at $93.3 million, an increase of 2.9 percent from a year earlier. Net after-tax earnings rose 2.6 percent to $46.1 million.

The Japanese company attributed the gains to strong sales of its new Mazda 626 and GLC and to cost reductions.

Car and truck unit sales for the period increased 7.5 percent to 654,865, including 73,540 KD kits. Export sales rose 7.9 percent to 450,068, representing a 68.7-percent share of total unit sales. Domestic sales of 204,797 were up 6.6 percent and represented a 31.3-percent share.

Truck export sales set a record at 11,169, up 12.1 percent from a year earlier. Exports to Syria and Egypt and kits to South Korea were the biggest contributors. Total truck sales climbed 8 percent to 182,583.

Auto sales of 472,282 were up 7.2 percent.

Vehicle production rose 6.2 percent to 647,893, including 73,540 KDs. Cars represented 465,906 units of that total; trucks, 181,987.

Huey is new owner of Carlson Olds-Honda

FRONTENAC, Mo. — William R. (Dick) Huey is the new owner of Carlson Olds-Honda here.

Huey succeeds George Carlson as president and owner. Carlson's family started in the auto business in 1928 with a Chevrolet dealership in Wheaton, Ill. In 1960, the Carlsons took over Evens Oldsmobile in Clayton and later relocated here.

Toyota

Continued from Page E-12

affect the cost of owning its vehicles.

These factors, he said, include initial purchase price, fuel economy, unscheduled maintenance costs, depreciation, scheduled maintenance costs, collision repair costs and insurance costs.

As an example of the program's success, Schrandt noted that scheduled maintenance costs for Toyota's entire 1983 model lineup have been reduced from the 1982 level by 31.7 percent.

Schrandt said collision repair is a big area that "hadn't been addressed by Toyota until the government started crashing our cars a little bit beyond what the standards called for."

"We suddenly focused our attention on it and, in an effort to lower collision and insurance costs of our vehicles, we began to work with insurance companies," he said. "We have a big effort with Tech-Cor, a division of All-State Insurance Co., which has a big research group.

"We said 'Hey, here is our 1986 products. Take a look at them and tell us where you see high repairability costs in case of collision,' " he said.

"We have been doing this for a number of years," Schrandt said. "We started this in 1979 and they were looking at 1982.

"As a result of the recommendations they made and the changes Toyota made, the 1982 Toyota Cressida and Starlet got an insurance discount," he said.

During the 1980s, Schrandt said Toyota will continue to build on its "already developed solid foundation in both service and parts."

He revealed that, on January 1, 1984, a new Toyota Customer Relations Network will be implemented with the following features: Direct on-line entry with batch entry as backup; handling of customer concerns in a more expedient manner; emphasis on dealer involvement in resolution of customer problems by providing customer contacts directly to dealer; expanded reporting capabilities; message communications to national headquarters, distributors and dealers, and automatic selection of customer files for followup satisfaction surveys.

Toyota deal for Murray

ROCKY MOUNT, N. C.—Bobby Murray, owner of Bobby Murray Chevrolet, Inc., Raleigh, N. C., has purchased Rocky Mount Toyota and has renamed it Bobby Murray Toyota, Inc.

Car-truck figures climb

Japanese boost output, sales, exports

The Japanese motor vehicle industry is undergoing ups and downs in 1983.

In the first eight months of 1983 (January through August), passenger car production in Japan was up 3.0 percent over the corresponding period in 1982. Truck output was up 2.9 percent, and bus output was down 19.9 percent. Total production of motor vehicles showed a 2.8 percent boost over last year.

Production of regular-size Japanese cars dropped 12.2 percent from a year earlier, but small cars showed a 3.8 percent increase and mini models were up 23.7 percent.

New vehicle registrations in the first eight months of 1983 showed a 3.1 percent improvement over a year earlier, with passenger cars up 3.4 percent, trucks up 2.9 percent and buses down 8.4 percent.

Japanese vehicle exports showed a 0.2 percent increase in this year's eight-month period, with cars up 1.1 percent, but trucks down 1.3 percent and buses down 12.5 percent.

Despite Japan's voluntary restraint agreement (VRA) with the U. S., vehicle shipments to the U. S. in the first eight months of 1983 were up 1.8 percent, on the strength of truck exports which were up 10.1 percent. Passenger car exports to the U. S. were down 0.5 percent.

Japanese motor vehicle production increased 6.0 percent in August 1983 to 723,661 units compared to 682,848 in August 1982. Output of passenger cars rose 9.4 percent to 469,832 units and truck production inched up 1.0 percent from the previous year to 250,354 units. Bus production remained down, 36.5 percent from the 1982 level.

Total worldwide exports were 410,833 units as compared to 397,492 in August 1982, a 3.4 percent increase. This total includes a 4.6 percent increase in passenger cars, a 1.4 percent increase in trucks and a 12.7 percent decrease in bus exports. Exports to the U.S. in August 1983 were 160,759 units compared to 154,479 units in August 1982, a 4.1 percent increase on a month-to-month comparison.

Japan's domestic motor vehicle market showed an 8.5 percent improvement in sales compared with August 1982, from 285,826 units to 310,025 units in 1983. A 12.3 percent increase in passenger car sales and a 3.9 percent increase in truck sales reportedly was due in part to positive consumer response to the introduction of new models.

All figures are on unit basis. (1) Production figures are as reported by all automobile manufacturers in Japan. (2) Size definitions are according to Japanese classification by piston displacement as follows: Regular 2,001 cc and more; Small 551 to 2,000 cc; Mini 550 cc and less. (3) New vehicle registration (in Japan) figures are compiled by Japan Mini-Vehicle Assn. and Japan Automobile Dealers Assn. All others sourced by JAMA. (4) All export figures are as reported by individual manufacturers on a constant basis for each month. (5) Export figures include the number of automobile in "knock-down" form exported to overseas countries for assembly. (6) Export figures to include Alaska and Hawaii. They do not include Puerto Rico and other island territories governed by the U.S. Government.

'Cheap' gasoline, engine woes hurt market

Diesel-car sales slump continues

By Jim Plegue
Staff Writer

The diesel-car market continued its disappearing act during the 1983 model year.

Domestic and import makers sold 195,041 diesel-powered cars during the period, a staggering 44.92-percent plunge from the 354,128 sold during the '82 model year and a far cry from 1981's peak sales of 536,440 cars.

The diesel cars accounted for a paltry 2.21-percent of total 1983-model sales, less than half the 4.59-percent penetration of 1982 and well below the 5.98-percent share that diesel cars held during the 1981 model year.

The fading popularity of the diesel engine can be blamed on stabilized or lower gasoline prices, the renewed consumer interest in performance cars and problems — be they real or perceived — with some diesel engines, particularly those sold by General Motors dealers.

There were plenty of losers, only a few winners.

Winner: Mercedes-Benz, which supplanted Oldsmobile to become the number one individual retailer of diesel cars in the U. S. and the maker holding the biggest chunk of the market.

The German maker sold 55,903 diesel cars during the 1983 season, up 10.73 percent from the 50,484 sold in '82. Mercedes doubled its market share — from 14.26 percent last year to 28.66 percent in 1983.

Loser Number One: General Motors. Its 1983-model diesel sales of 74,846 units represented a 60.28-percent drop from the 188,444 sold during 1982.

GM market penetration hit the skids, too. The company's 38.38-percent share of the diesel market was down 14.83 percentage points from the 53.21-percent share of the '82 model year. In 1981, GM's diesel market share topped 63 percent.

All GM divisions reported major drops, both in volume and in market penetration. Oldsmobile, GM's diesel volume leader, sold 44,136 diesel cars during 1983, down 49.27 percent from 87,015 during 1982. Oldsmobile market penetration slipped nearly two percentage points — from 24.57 percent to 22.63 percent in 1983.

Loser Number Two: Volkswagen-Audi. Despite a 17.28-percent increase in diesel sales by Audi, the VW-Audi aggregate dropped 51.61 percent because of poor diesel sales by Volkswagen.

VW-Audi sold 35,756 diesel cars during the 1983 model year, compared with 73,888 in 1982. VW-Audi market share dropped from 20.86 percent in 1982 to 18.33 percent in 1983.

Audi is dropping out of the diesel market entirely during 1984. Its 4000 and 5000 models will not be offered with diesel engines.

Volkswagen diesel sales of 27,857 during the '83 model year were off 58.52 percent from the 67,153 sold during '82. VW's decline is a result of sluggish Rabbit diesel sales.

Only 21 percent of Rabbit sales during the 1983 model year were diesel models, compared with more than 60 percent during the car's heyday in 1981. For the current calendar year, the Rabbit diesel installation rate is even lower: 17 percent.

Volkswagen has made the diesel engine the standard power in its 1984-model Rabbit and Jetta models. Gasoline engines are now an extra-cost option in those cars.

Datsun and Peugeot diesel sales during 1983 were nearly halved, while Isuzu diesel sales were down 26.9 percent. Despite those reductions, each company made slight gains in market penetration during 1983.

Datsun has dropped its diesel-powered Maxima model for the '84 model year, but will continue to sell a diesel-powered version of the Sentra.

Volvo was the only other maker to record a year-to-year improvement in diesel sales. The company sold 6,925 diesel cars, up 4.64 percent from 6,618 sold during 1982. Volvo market share of 3.55 percent was up 1.68 percentage points from 1982's share of 1.87 percent.

Despite the shrinking diesel market, there are several new diesel entries for 1984.

Mercedes-Benz has just introduced its new 190-D 2.2 diesel model. Ford Motor Co. has added a 2.0-liter Toyo Kogyo-built diesel as an option in Ford Escort and Tempo and Mercury Lynx and Topaz, as well as a BMW-made six-cylinder turbocharged diesel as an option in Lincoln Mark VII. Toyota has introduced a Camry 1.8-liter turbo diesel model and a 1.8-liter diesel-powered Corolla for 1984.

Ford splits stock 3 for 2; cash dividend maintained

DEARBORN. — Ford Motor Co. directors declared a three-for-two stock split and a cash dividend, to take place Dec. 1 for stockholders of record on Nov. 1.

The cash dividend will be 45 cents on shares outstanding before the split, effectively maintaining the 30-cent rate paid in the third quarter. Before that, no dividends had been paid for six quarters.

Ford stock had been trading in the neighborhood of $66 prior to the split and dividend announcement.

"The rule on Wall Street is, as the price nears $75, you should begin thinking about splitting it," said Arvid Jouppi, independent analyst based in Grosse Pointe, Mich.

Jouppi said Ford should have no problem maintaining a 30-cent-a-share dividend on the 181.5 million shares that will be outstanding after the split. That would represent an annual dividend outlay of about $218 million for Ford.

"Their earnings are coming through very strongly," he said.

"The board of directors is saying: (Chairman Philip) Caldwell has done it: North America is profitable. And the general automotive outlook is good.

"Farther down the road, stockholders are going to remember this when Ford is seeking new money; that is, selling equity," Jouppi said.

Ford last split its stock in May, 1977, when it issued stockholders one extra share for every four owned. There was also a two-for-one split in May, 1962.

Chrysler names Dellas Huntsville plant manager

HUNTSVILLE, Ala. — George J. Dellas has been named manager of Chrysler Corp.'s Huntsville Automotive Electronics Plant. He formerly was manufacturing staff executive — Stamping, Assembly and Diversified Operations Group.

At Huntsville, Dellas succeeds Bryan P. Prucher, who has been appointed manager of production engineering for Chrysler's Stamping, Assembly and Diversified Operations.

FTC initial decision finds discrimination in ad allowances

GM told to treat rental firms evenly

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — General Motors illegally discriminated against small car-rental firms by giving them smaller advertising subsidies than it gave to larger ones, according to an initial decision by FTC law judge James P. Timony.

GM was ordered to provide even treatment under the judge's order and it must advertise its advertising program in at least two publications for five years.

GM is reviewing the decision and expects to appeal.

The case is a companion to another also brought against Ford Motor Co.

The Ford case was tentatively settled last June in a similar fashion, but at that time, the consent settlement stipulated that Ford was not bound if GM — through its litigation — received a better deal. Thus, Ford has an opportunity to challenge the initial decision against GM if it is dissatisfied.

The judge's order in the GM case can be reviewed by the five FTC commissioners on their own initiative or on appeal. If neither occurs, then the judge's initial decision becomes final within 30 days.

• After dropping the Robinson-Patman Act charges which he found did not obtain, Timony ruled that GM's payments of millions of dollars in advertising allowances to a few large rental and leasing firms and not to smaller competitors was an unfair method of competition, in violation of the FTC Act.

He noted that the large firms could "shift to GM a substantial portion of their advertising expenditures, while smaller competitors are unable to command such allowances."

According to the initial decision, GM in 1978 favored 15 rental and leasing firms and even among those, "GM does not make proportionally equal advertising payments." For example, "National Car Rental System received about $160 per GM car purchased during 1976-78 while other favored customers received less, ranging down to $6 or $7 per car."

Under the agreement, GM would have to make payments available on proportionally equal terms to all competing rental and leasing firms. GM could terminate advertising agreements under certain conditions — if a firm were using false or deceptive advertising, or advertising in a manner that reflects negatively on GM, or fails to do a reasonable job of vehicle maintenance.

Under similar circumstances, GM could also refuse to enter into joint advertising agreements. But in all circumstances, treatment must be consistent among renters and leasers.

Keep curbs, don't raise 'em, UAW tells Reagan, Japan

By Marjorie Sorge
Labor Editor

DETROIT.—The UAW continued to badger the Reagan Administration on the import issue as union President Owen Bieber called for the continuation of auto export restraints by the Japanese auto makers at current levels or below for at least two more years.

In a letter to President Reagan, Bieber also urged the Administration "to do everything possible to see that no separate quotas are provided for General Motors' planned import of cars produced for them by Isuzu and Suzuki in Japan."

GM would like to have the quotas raised from 1.68 million to perhaps 2 million. The current Voluntary Restraint Agreement (VRA) expires March 31, 1984.

GM is planning to sell about 100,000 subcompacts imported from Isuzu and is also planning to import between 80,000 and 100,000 small cars from Suzuki for the 1985 model year. In addition, the company is awaiting FTC approval of a joint venture with Toyota to produce 200,000 small cars annually at its idle Fremont (Calif.) assembly plant starting with the 1986 model year.

Bieber's statement was well orchestrated, coming the same week as an announcement from Chrysler Corp. that if the restraints are raised or eliminated, it will likely scrap plans for its American-built small cars and begin importing them from Japan.

• According to Bieber, raising the VRA level from 1.68 million to 2 million would cost the U. S. nearly 100,000 jobs and that would double if the quotas were increased to 2.3 million.

In calling for an extension of at least two years, he said one more year is "unacceptable. (It) will not spur additional Japanese investment here nor prevent the U. S. companies from making a headlong rush to bring in imports themselves. In fact, it would appear to be playing politics, given the election-year timing and the one year of restraint expiring just 10 weeks after the 1985 inauguration."

While some observers have said the restraints would make the U. S. auto industry "fat and lazy," Bieber pointed to the concessions made by the auto workers to save jobs, the reinvestment programs of the domestic companies and the price restraints exercised by the companies during the first three years of the VRA.

He said the nation and the industry "need the stability of continued restraints by the Japanese to consolidate these gains."

The Japanese currently are taking 21.4 percent of the U. S. market.

Peugeot's president to head Citroen, too

Costs outweigh benefits, report finds

Smog controls called unpopular

ST. LOUIS. — A working paper published by the Washington University Center for the Study of American Business, asserts that "the cost per car of pollution control through 1978 enforcement levels outweigh the most complete benefit estimates available."

The report was derived from the dissertation of Dr. James Langerfield, assistant to the director of the bureau of competition at the FTC.

It was funded by the center, which pointed out that "the analysis and conclusions set forth are those of the author and do not necessarily reflect the views of other members of the FTC staff or the commission itself."

The conclusion of the paper, entitled The Costs and Benefits of Automobile Emissions Controls and Safety Regulation, "was arrived at by comparing production costs and social benefits, as well as by estimating, in dollar terms, auto buyers' responses to these regulations."

Langerfield said that the public expresses strong support for environmental regulation in poll after poll. Yet, when the cost of these controls becomes more personal — as in reduced fuel efficiency, higher operating costs and poorer engine performance due to auto emission standards — the consumer's enthusiasm wanes."

Were it possible to do so, consumers would have been willing to pay an additional $355 (in 1982 dollars) in order to purchase an auto free of pollution control devices in 1978, according to Langerfield. Morever, he said, this cost is in addition to the new-car price increase due to original installation of pollution control devices.

• By adding this cost to pay for removal of the pollution control devices ($355 per new 1978 vehicle) to the estimated cost of installing all the equipment required by federal environmental regulation ($438 per car), the study estimates the total cost per vehicle for federal pollution controls at $793 (in 1983 dollars).

Consumer response to pollution controls, herefore, plus the production costs of achieving the required levels of pollution control, came to $8.9 billion (in 1982 dollars).

That outweighs the best estimates of benefits of $6.8 billion by approximately $2 billion a year, computed in 1982 dollars, Langenfield said.

"This analysis finds also that federal safety regulations through 1978 did not significantly improve the value of new cars, as perceived by consumers. Apparently, car buyers considered whatever benefits brought about by the safety standards to be offset by the associated inconveniences and extra operating costs," the study said.

"While Americans continue to be concerned with environmental and safety issues regarding autos, it is clear that when the cost of these programs becomes personalized, the consumer is willing to make tradeoffs," Langenfield said.

Given that pollution control regulations have not been relaxed since 1978, this research implies that current pollution control levels are "too strict and fail the cost/benefit test," the report said.

The results do not suggest that the automobile emissions controls should be abolished, but the results do suggest that a rollback of federal standards is appropriate, Langenfield said.

Mexican workers consider aiding plants by selling cars

MEXICO CITY. — The latest twist in the unstable Mexican automotive sector is that workers are considering pitching in to help assembly plants' efforts to increase sales.

The novel idea was broached by General Motors of Mexico workers as a means of overcoming slumping sales and guaranteeing jobs for assembly plant personnel.

According to the plan worked out by the GM union and revealed by Jose Garcia, who handles worker public relations, it would be possible for assembly plants to increase sales if they cooperate in allocating an unspecified part of their production to workers.

Workers would then be on the order of "mini-distributors," selling cars to friends, relatives and acquaintances.

Workers are in accord with the idea, seeing it not only as a means of protecting jobs and increasing car sales, but also providing additional income.

Garcia explained that if workers, who obtain price concessions, could have two or three units on the same terms, sales could spurt.

While the suggestion is under study, no definite commitment has been made by management, and other car producers have not given any signs of approval or rejection of the labor offer.

• Commenting on the industry uncertainties, the Independent Union of Workers of the National Automotive Industry said that workers are worried because they can see no possibility of major improvement over the near, and possibly medium, term.

As Tomas Guevara, secretary of the union expressed it, workers are not expecting the situation to improve, but only hoping that "it won't get worse."

According to Guevara, whose union includes Renault and Diesel Nacional (Dina) workers, there is no certainty that despite the already sharp production-sales slumps that a "bottoming out" is in sight.

Informed industry sources, meanwhile, have said that apparently assembly plants will continue producing bigger cars, but with four-cylinder and six-cylinder engines.

The Chrysler plant has already taken steps in this direction, planning to produce four-cylinder engines with compressors to increase power yields and possibly reduce gas costs.

Reportedly, eight-cylinder engine production will continue in Mexico, but these will be used only for trucks.

Motor vehicle litigation declines in California

SAN FRANCISCO, Calif. — A slight decline in the motor-vehicle litigation index during the 1981-1982 fiscal year has been reported by the Insurance Information Institute. The 1981-1982 index was 205.1, compared with 209.6 for fiscal 1980-1981.

The index represents the number of motor-vehicle cases filed in California Superior Courts per 100,000 population. Cases filed in fiscal 1981-1982 totaled 50,180 vs. 50,723 in the prior period.

★—No Oklahoma registrations, 1983 and 1982; New Mexico, August, 1983.

#—Memo units are trucks which are part of the total listed above each entry. Chevrolet memo units are vans, El Camino, LUV and S-10 compacts; Ford, vans, Bronco, Courier, Ranger and Bronco II; GMC, vans, Jimmy, Caballero and S-15 compacts; Dodge, Ram 50, Ramcharger, Ram Van and Rampage; Jeep, CJs, Cherokee, Wagoneer and Scrambler. Plymouth trucks are Voyager, Arrow, Trail Duster and Scamp.

—Compiled from R. L. Polk & Co. data

With ½ pct. of Dodge ad dollars

Magazines are urged to support promotion

By Joseph Bohn
Marketing Editor

BBD&O Detroit asked magazines with which it does business to return one-half of one percent of their gross Dodge ad revenues for a special trade paper campaign, aimed at telling car dealers why and how it uses the print medium.

It is the third recent effort by an auto division to gain merchandising support from magazines and appears to have more support from publications than previous programs by Chevrolet and Ford.

Some major publications still expressed private reservations about the proposal, though, and were still debating whether to go along at presstime.

In concept, the magazine community feels that a program like this, aimed at promoting their medium, is a good one. But some major books object to the concept of providing merchandising support, no matter what form it takes.

Apparently, auto dealers are heavily addicted to TV as the best medium for factory advertising and have on occasion questioned why car companies spend as much as they do in the magazines, even though magazines typically only take 20 to 30 percent of Detroit's budgets.

Eugene McCarthy, senior vice president - media division, BBD&O Detroit, apparently feels he can run a campaign that will educate them while benefitting the print community, his client and agency.

McCarthy declined comment on his program. Industry sources said it may be because the proposal is still under consideration at some publications, and because word hasn't gotten out to all of them yet.

• BBD&O runs Dodge ads in an estimated 70 to 80 publications, and Dodge is said to have a higher percentage of dollars in print than many other car divisions.

Generally, the magazine reps who privately opposed the idea were those whose publications had no merchandising policy.

McCarthy ran his idea by the Magazine Publishers Assn. committee in Detroit before announcing it generally.

A member of that group said, "We're 100 percent in favor of it. We talked about it at a meeting, and we thought it was a helluva thing for magazines.

"There are some magazines they're (Dodge) using that aren't part of the MPA, so it can't officially be endorsed by the MPA," he said.

His own publication, he added, one of the top 10 nationally, contributes a certain number of dollars per page to any advertiser for merchandising support and that's how much it would contribute to the BBD&O program.

Similarly, another MPA member thought the program "might be a success" and indicated that several magazines which he represented supported it.

"It's not a big nut to swallow," he concluded.

Those who favored the idea pointed out that the MPA spends promotional money yearly to reach dealers at the NADA convention in an effort to do what BBD&O is seeking to do.

They also pointed to the merchandising money given for "premiums, ducks, posters . . . meaningless crap," which had no benefit to the print community.

• One rep whose publication had little Dodge business said monthlies in Detroit were lucky to get "six, eight, 10 pages" of ads (from a division like Dodge), and one-half percent of the gross of what they got could scarcely buy them a trade page ad. He felt combining money would improve the efficiency of the pitch for everyone.

On the other hand, however, are those publications who generate a lot of auto ad dollars and have no merchandising allowance policies. They are opposed to giveback on principle and feel that publications should be chosen for their media value rather than support allowance.

Such reps questioned where it would all lead. Would a Sears and Seagram's begin asking for one-half percent back for their own promotional plans. Would the ante go up to one percent next year? And so forth.

A publication that grossed $1 million yearly, for example, might be required to give back $5,000.

Part of McCarthy's idea is to run a variety of Dodge model ads, listing the magazines in which they appeared on the right-hand side.

This led a rep to query that, if one publication ended up contributing a larger dollar amount than another, would its name appear in larger logotype.

Any request for merchandising support appears destined to touch off a measure of controversy. And BBD&O may not be the last to ask for such support.

Its program bears close watching, however, since it offers to do more for the print community than anything yet. If this one runs into opposition, future proposals most certainly will.

NADA to feature 2nd exhibit hall at Dallas convention

WASHINGTON. — For the first time in its 67-year history, the NADA Convention and Exposition, to be held Feb. 4-7 in Dallas, will include a second exhibition hall devoted entirely to one product.

While NADA's convention in Las Vegas last year set a record level for exhibit floor space, the 1984 total of 137,000 exceeds that by 23,000 square feet.

The unprecedented demand for additional space has resulted in an exhibit hall featuring only van conversions. Over 200 automotive and automotive-related services and manufacturers have reserved space in the Dallas Convention Center.

The convention program has been revised to allow more exclusive, non-competitive time in the exposition.

Advance registration for the 1984 convention closes Friday, Dec. 23. Registration forms and fees must be postmarked by Dec. 23 to receive discount registration fees. Additional information is available at (703) 821-7143.

18 assembly plants work overtime

Auto production steady at 160,000

By Mary Beth Mayer
Staff Writer

Although 18 auto assembly facilities worked overtime last week, production just missed matching the tally of the week before, when 16 plants operated extra hours.

The car makers targeted last week's output at 160,180, down slightly from 160,938 the prior week, but 41.01 percent ahead of the year-ago week's 113,598.

Breakdown for the week by company was: General Motors, 55.90 percent; Ford Motor Co., 23.46 percent; Chrysler Corp., 15.54 percent; American Motors, 2.81 percent; Volkswagen of America, 1.47 percent, and Honda, 0.82 percent.

So far this year, there have been 5,367,281 cars completed, up 27.54 percent from 4,208,314 finished at this time last year.

GM's Tarrytown, N. Y. (Citation, Phoenix), and Willow Run, Mich. (Skylark, Omega), plants are in the midst of two weeks of downtime because of a parts shortage. On temporary layoff are 8,500 workers from the facilities. Both are slated to return next Monday (Oct. 31).

GM had eight points working two shifts Saturday (Oct. 22). Working extra hours were: Detroit, Doraville (Ga.), Fairfax (Kans.), Flint (B, D and G lines), Janesville (Wis.), Lansing (B, D and G lines), Linden (N. J.) and Oklahoma City.

Working extra daily hours for Ford last week were: Atlanta, Chicago, Dearborn, Edison (N. J.), Kansas City, Lorain (O.) and St. Louis. Chicago, Edison and Kansas City also worked Saturday.

Chrysler's Belvidere (Ill.) and Newark (N. J.) facilities operated two daily 9-hour shifts last week and its Jefferson (Detroit) plant worked two daily 8½-hour shifts. All three points operated two eight-hour shifts Saturday.

Seven Ford facilities are slated to work overtime this week. Working both daily and Saturday (Oct. 29) are Atlanta, Chicago, Edison, Kansas City, Lorain and St. Louis. Ford's Wayne plant is scheduled for daily overtime only.

This week, Chrysler plans overtime at all four of its car plants. Belvidere, Newark and St. Louis No. 1 will work two nine-hour daily shifts while Jefferson is slated for two 8½-hour daily shifts.

Toyota's stalling threatens GM venture FTC warns

Continued from Page 1

his economic philosophy, and his view of the law, not by any lingering fondness for General Motors. That doesn't mean I think his economic philosophy and its implementation are any less a hazard to the public good."

Pertschuk asserted that under Miller's leadership, the FTC's economic philosophy tends to favor actions of the GM-Toyota type.

• "Take merger analysis," he said. "When we are faced with a proposed merger between the third- and fourth-ranking companies in a major industry, our economists astutely perceive this merger to be a competitive goad to numbers one and two.

"If America's giants, numbers one and two in an industry, prepare to join hands, the economist quickly perceives that the relevant geographic market is not the U. S., but the world or, given the prospects of interplanetary commerce, the universe," Pertschuk said.

Meanwhile, the Fremont plant's future remains at an impasse. Under the Hart-Scott-Rodino Act, GM and Toyota may not move any assets into the plant — although GM can continue to spend its own money on the adjacent stamping plant. If they were to do so, FTC would go to court immediately to freeze the status.

Until Toyota provides the data requested, the 20-day clock under the Hart-Scott-Rodino Act does not start to tick, and FTC cannot be expected to make a decision.

Rumors abound that while GM remains eager for the venture, Toyota's fervor may have cooled. The threat of enactment of domestic-content legislation is not so great since car sales have improved.

Rep. John Dingell, Michigan Democrat, explained his views on the GM-Toyota venture with a story about a mother who was busy cooking dinner and upon hearing a tremendous racket from the children, asked what the problem was. After hearing them quiet down, she said, "That's nice children, don't fight."

Dingell's story was a reference to the division among the auto companies.

Truck production now tops total for all of 1982

With two months of 1983 remaining, domestic truck production has topped the total 1982 output.

This year's production is 19.28 percent ahead of the 1,596,935 trucks completed at this time last year.

Overtime schedules at 11 assembly plants put last week's estimated truck production at 58,688, up 3.31 percent from 56,808 built the week before and 63.65 percent better than the year-ago week's 35,863.

General Motors' Pontiac No. 6 point returns to work today (Oct. 24) after being closed for a week for inventory adjustment.

Four GM points worked two shifts Saturday (Oct. 22). Working Saturday were: Janesville (Wis.), Lordstown (O.), Pontiac No. 5 and St. Louis. GM's Detroit plant worked one shift Saturday.

Six Ford facilities worked both daily and Saturday overtime last week. They were: Kansas City, Lorain (O.), Louisville, Norfolk (Va.), Michigan and Twin Cities (Minn.). The overtime schedule for this week is the same, except Louisville is slated for daily overtime only.

Full work week hikes car-truck output in Canada

Estimated Canadian auto and truck production last week rose over the previous week, which was shortened by the Thanksgiving holiday.

Car production last week was targeted at 18,725, a 22.63 percent gain over the 15,270 units assembled the week before, and leading the year-ago week's output of 11,538 by 62.29 percent.

The truck makers estimated production at 12,131 last week, 19.33 percent above the 10,166 built the previous week, and 3.48 percent ahead of the 11,724 units assembled in the year-ago week.

Production of the full-size Mercury Grand Marquis at Ford Motor Co.'s St. Thomas (Ont.) facility is slated to begin today (Oct. 24) and Ford Crown Victoria output is scheduled to begin there Nov. 7.

So far, there have been 572 T-115 minivans built at Chrysler Corp.'s Windsor (Ont.) facility, the company said. It was estimated that 500 Dodge Caravans, Mini Ram Vans and Plymouth Voyagers were built there last week.

Auto maker profits break records for third quarter

By Kathleen Hamilton
Financial Editor

The U.S. auto industry smashed its 1977 third-quarter profits record by turning in earnings of $1.16 billion and made the feat even more pleasant by making its profit on far fewer cars than it built in 1977.

Its latest showing is a $1.38 billion turnaround from the third quarter of 1982 when the Big Four reported losses of $218 million. It also was the first profitable third quarter in five years.

Back in 1977, when the Big Four set the old third-quarter record of $706 million in net income, U.S. car production was 9.3 million units. This year, the makers will be lucky if they turn out 7 million cars.

Individual company reports on Pages 6 and 50.

In the third quarter of 1977, the Big Four sold $24.01 billion worth of vehicles; in the latest quarter, their sales were 31 percent higher: $31.48 billion.

"There has been an improvement in productivity, no doubt about it," said Ann Knight, auto analyst of Paine Webber Mitchell Hutchins, Inc.

"All three (General Motors, Ford Motor Co. and Chrysler) had various measurements, such as gross margins and pretax earnings, substantially higher than in 1976" when the industry was at a similar stage of recovery, she said. The recovery is now a sure bet, according to Knight.

The auto makers' bottom lines also profited from low materials costs—the biggest cost factor in auto manufacturing, she said.

• Biggest contributor to the profits turnaround for 1983 was Ford, whose earnings of $333 million were $658 million better than in 1982.

GM's profits of $737 million showed a $608 million improvement. Chrysler's profits of $100 million were $91 billion better than a year earlier. And, thanks to the sale of its defense subsidiary, American Motors' loss of only $9 million was $22 million less than in 1982.

Ford also led the group in relative sales gains: Up 28 percent for the quarter to $10.29 billion. GM had the biggest dollar-value gain: $3.34 billion to $17.62 billion.

Part of the reason for the profits record lies in the fact that this wasn't a typical third quarter. Traditionally the least profitable quarter because of

* AMC's 1982 sales and loss include AM General. Its 1982 sales restated to reflect the sale of AM General would be $641 million.

GLC convertible

Mazda concept car debuts in Tokyo

A convertible version of the Mazda Familia (GLC in the U.S.) was introduced to the public at the Tokyo Auto Show. The concept car was developed by Mazda North America's product planning and research group in Irvine, Calif. The car was built for Japan with right-hand drive by Richard Straman, a Newport Beach (Calif.) coachbuilder.

Documents said to show DeLorean diverted cash

By Edward Lapham
Senior Editor

DETROIT. — John Z. DeLorean "wrongfully misappropriated" and "diverted" at least $8.5 million of the $17.65 million which disappeared from his sports-car project, according to documents filed in federal court here last week.

"This new evidence is the smoking gun that solves the GPD mystery," said Malcolm Schade, chairman of the creditors committee of bankrupt DeLorean Motor Co.

The documents purportedly show how and when John DeLorean caused funds to be removed from the project and where he had the funds transferred.

This "new and compelling evidence" presented to U.S. District Judge Philip Pratt showed that DeLorean used an escrow account and several financial institutions to cover the trail of the missing money and that he "wrongfully secreted" in one of his homes certain company documents relating to the missing money.

As a result of the new evidence, uncovered by court-appointed bankruptcy examiner Price Waterhouse and the creditors committee, Judge Pratt issued a temporary restraining order to keep any of the missing funds which might still be in U.S. banks from being removed from the court's jurisdiction.

The order was sought by attorneys for the creditors com-

Symes to be first vice president for 1984

Jennings named NADA president

WASHINGTON.. — James P. Jennings, a Chevrolet dealer in Glenview, Ill., has been named president-elect of NADA. He will become president following the NADA convention in Dallas in February.

NADA directors elected Jennings last week. He will succeed William C. Turnbull Sr., a GMC-International Harvester dealer in Huntington, W. Va.

Jennings formerly was first vice president of NADA. Succeeding him in that post is William J. Symes, president of Symes Cadillac, Inc., Pasadena, Calif. This puts Symes in line for the NADA presidency in 1985.

Robert M. Burd, a Volkswagen-Audi dealer in Washington, N. J., was elected NADA secretary for 1984, and Anthony Ursomarso, president of Union Park Pontiac, Wilmington, Del., was elected treasurer.

Jennings, who heads Jennings Chevrolet, Inc., has been a new-car dealer and an NADA member since 1957.

He is chairman of the 1983 NADA Industry Relations Committee and is a member of the Executive and Nominating committees. He also is a member of the board of governors of the NADA Automobility Foundation and is a trustee of the NADA Insurance Trust and the NADA Retirement Fund.

Symes is serving his third term as NADA director for Southern California. He is a past president of the Motor Car Dealers Assn. of Southern California.

Burd is president of Warren Volkswagen, Inc., Washington, N. J., and vice president of Burd Chevrolet-Oldsmobile, Washington, N. J., and Pocono Volkswagen, Inc., Stroudsburg, Pa. He is a 1975 Time Magazine Quality Dealer Award winner.

Ursomarso is serving his third terms as NADA director for Delaware. He was a Time Magazine Quality Dealer Award winner in 1971, and he is a past chairman of the Delaware Automobile Dealers Assn. and the Pontiac Dealer Council. His dealership also handles Honda and BMW.

James P. Jennings

William J. Symes

Catalyst is the catch for Mercedes 500-SL

DETROIT.—Mercedes-Benz will not sell its 5.0-liter V-8-powered 500-SL coupe/roadster model in the U.S., despite recent introduction of the V-8 sedan and four-seat coupe versions (500-SEL and 500-SEC). A spokesman said the convertible's limited chassis space prohibits use of the required catalytic converter. The 500-SL has entered the U.S. as a popular "gray-market" car.

New York firm readies Italian diesel for Lincoln

By Roger Rowand
Engineering Editor

Lincoln-Mercury dealers soon are going to be able to satisfy their high-mileage customers who want something other than factory power in the big cars they like to buy.

Those dealers will be offering a power package to meet the different needs of that kind of driver. High-mileage driving does indeed produce different needs and a large, diesel-powered car that can meet most of those needs has been missing from the Lincoln-Mercury product lineup.

The diesel engine itself is different in construction and performance, too, and a different type of company, Vehicle Technology, Inc., College Point, N.Y., is about to start marketing full-size Lincolns with turbocharged 3.6-liter, six-cylinder diesel engines.

L-M, of course, is offering turbocharged diesel power by Toyo Kogyo in 1984 in its small Lynx and Topaz. Later in the model year, it will offer a BMW turbodiesel for the Continental and Mark VII. But it is the Lincoln Town Car that Vehicle Technology is working with.

The standard engine in that line is Ford's 5-liter V-8 with electronic fuel injection. The power plant to be installed by Vehicle Technology is an Italian model called the VMHR6-92. It is a true diesel.

VM engines are marketed in the U.S. by Avco Corp.'s Industrial Engine Operation.

• The involvement of the New York firm in L-M car operations is no flash in the pan. In 1980, the car division planned on using BMW diesels in this '84 model year in the Continental which—back in 1980—was to be the full-size car of 1984.

It was at that point the division and Vehicle Technology started the project expected to run through the life of cars in the Panther Series — LTD, Crown Victoria, Grand Marquis and the Town Car, said Richard H. Thaler, managing director of Vehicle Technology.

His company is widely known in the taxicab trade as a builder of cabs. Thaler, a former New York University professor, holds a Ph.D degree in me-

Bieber says U. S. small-car production is at stake

UAW urges 2-year Japanese curb

By Geoff Sundstrom
Washington Reporter

WASHINGTON.—UAW President Owen Bieber has warned U. S. Trade Representative Bill Brock that the future of small-car production in the U. S. hinges on the terms of a new Japanese voluntary restraint agreement.

Bieber sent Brock a last-minute letter before the trade representative left for Tokyo last week, urging a two-year extension of the agreement that limits Japanese car exports to the U. S.

Both the U. S. and Japanese governments are said to be working toward a final settlement of the auto trade issue.

Bieber's letter was apparently in reaction to press reports that the Reagan Administration is pressing for a single year of restraint at the 1.8 million level.

Bieber told Brock that anything less than a two-year extension at the current 1.68 million cars, would represent a "serious failure" by the Administration because it will provide "no real impetus" for continued Japanese investment in U. S. production.

Bieber said the Administration's decision not to push for a two-year extension of the restraint agreement would "in all likelihood" prompt Ford and Chrysler to seek replacement vehicles for the Escort/Lynx and Omni/Horizon models from Japanese or other foreign sources.

General Motors would be able to supply the subcompact market with 200,000 Isuzus and 100,000 Suzukis annually on a delayed timetable, Bieber said.

If the Administration is successful in negotiating for a 1.8 million ceiling on Japanese cars, the number would not allow GM to bring its full complement of Japanese cars to the U. S.

But GM would be free to import after March of 1985, when a fourth year of restraint would expire.

Chrysler Corp. has already indicated that a decision by GM to import small cars in large numbers could adversely effect Chrysler's U. S. small-car production plans.

In a related move, Robert McElwaine, president of the American International Automobile Dealers Assn., told a Senate subcommittee last week that his organization would take legal action if a new voluntary restraint agreement allows GM to bring in Japanese cars, while keeping other Japanese car dealers at restricted inventories.

McElwaine said, "Restricting the supply of merchandise for franchised Japanese-make dealers, while permitting an increase in shipments for distribution through competing GM dealers, constitutes restraint of competition."

He said GM, the U. S. Government and the Japanese Government could be the target of such a suit.

FTC orders Ford to prove quality claim

By Joseph Bohn
Marketing Editor

The FTC's Cleveland office is investigating Ford's advertising claims to superior quality — at the prompting of Chrysler.

An FTC spokesman was noncommittal about the investigation. But Ford confirmed it has been asked to turn over a study, made in January, 1983, of 14,000 new-vehicle owners who had had their vehicles for three months—upon which Ford's claim is based.

Ford Division has claimed its cars have 36 percent better quality than Chrysler's and 10 percent better quality than General Motors', based on the study.

Chrysler had earlier sought to consider the claim with a short-lived ad program and had also complained to the TV networks. Ford made minor modifications—adding a little more detailed explanation—in its TV commercials, as a result.

It still uses the signoff "Best Built American Cars" and "Best

Chrysler beats the Big Apple

New York City Mayor Ed Koch, standing right, settled his debt with Chrysler Corp. Chairman Lee Iacocca, standing left, at the Alfred E. Smith Memorial Foundation's annual dinner at the Waldorf Astoria in New York. Koch and Iacocca bet about who would pay off their federally guaranteed loans first. Iacocca won in August and here Koch presents the payoff—a bushel of apples.

Domestic total is 235,334, up 40 pct. over '82

Auto sales strong in mid-October

By Jenny L. King
Staff Writer

Mid-October domestic new-car sales stayed in overdrive, with a 40.51-percent increase in volume following a 45.07-percent improvement the first 10 days of the month. General Motors sales, up by 45,000 units, provided the greatest boost for the combined surge.

This year's total climbed to 235,334 from the year-ago 167,485. It was best for the period since 1979 when 269,547 new cars were delivered. Alltime high for mid-October was 334,290 in 1971, and 1958 was the worst in modern times: 82,470.

In the nine-selling-days period, General Motors dealers retailed 143,368 new passenger cars, up 46.08 percent from 98,141 last year. Ford Motor Co. turned in a total of 55,658, up 36.01 percent from 40,922. Chrysler Corp. was up 23.51 percent, to 27,175 from 22,003.

American Motors released a sales estimate of 4,800, up 17.07 percent from the Automotive News estimate of 4,100 for the period in 1982. Volkswagen was up 10.69 percent, to 2,567 from 2,319, and Honda sales added to 1,766 in its first year on the domestic market.

• GM climbed to 60.92 percent of the market from 58.60 percent. Ford had 23.65 percent, down from 24.43 percent. Chrysler cornered 11.55 percent, down from 13.14 percent.

AMC dropped to 2.04 percent from 2.45 percent. VW claimed 1.09 percent, compared with 1.38 percent a year ago, and Honda held 0.75 percent of the current market.

AMC and Imperial were the only domestic makes with sales declines — 41.47 percent and 90.38 percent, respectively, and Imperial figures are sellouts as the cars and two AMC nameplates are no longer being built.

Chrysler sales were up 58.46 percent for mid-October, Dodge was up 32.80 percent and Plymouth was up 0.32 percent. Ford was up 32.80 percent, Mercury was up 57.52 percent and Lincoln was up 3.46 percent.

Buick was up 82.25 percent, Cadillac was up 9.95 percent, Chevrolet was up 29.27 percent, Oldsmobile was up 44.59 percent and Pontiac was up 69.07 percent.

Renault was up an estimated 56.10 percent and VW was up 10.69 percent in the mid-month period.

With nine selling days both this year and last, the daily rate was up 40.51 percent, to 26,148 from 18,609. Year-to-date sales were up 18.54 percent, to 5,408,459.

Annualized sales based on the Oct. 11-20 total were running at a rate of 8,039,000.

O'Gara shuts down showroom where it sold limos, exotic cars

By Matt DeLorenzo
Los Angeles Reporter

BEVERLY HILLS, Calif. — O'Gara Coach Co., which for the past 5½ years has sold limousines and exotic cars from its showroom on the corner of Rodeo Drive and Wilshire Blvd., is closing its doors forever Nov. 1.

It's not that the store is unprofitable, according to Ed O'Gara, the firm's owner. He estimates that the operation takes in between $7 million and $10 million a year.

"It's simply a matter of not being able to renegotiate the lease," O'Gara explained. And O'Gara Coach Co.'s closure does not mean O'Gara is getting out of the transportation business. The money used to run the store will be allocated elsewhere in businesses spawned by the coach company.

"We just feel our interest would be well served to concentrate on other things we have — the things over which we have some manufacturing control rather than being the intermediary," O'Gara said.

These "other things" are limousine and armored vehicle manufacturing, an aftermarket parts operation and an aircraft interior business, all of which began with selling high priced cars to the well-to-do from one of the most exclusive shopping areas in the heart of Beverly Hills.

"The business (O'Gara Coach Co.) served its purpose, it launched all these other activities," O'Gara said. "It made us aware of markets, customers and products. You don't find these things out by sitting in a vacuum."

• Although the flow of revenues from the retail store has been relatively constant, its contribution to the total revenues generated by all of O'Gara's enterprises has been shrinking.

That declining role, along with the fact the store was operating on a year-to-year lease arrangement, resulted in the decision to close. O'Gara admits it was a difficult decision.

O'Gara said the profit potential of the operation had limitations. "It's not like you're going to expand that activity. I doubt we could have done a $20 mil-

Dingell wants to encourage states with financial carrot, stick

Bill would push seat-belt use laws

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — A bill to encourage states to enact and enforce seat belt use laws and regulations and to require federal employes to use the seat belts in federal cars while on the job has been introduced by Rep. John Dingell, Michigan Democrat.

The Dingell bill authorizes $15 million for fiscal 1984. For fiscal years through 1990, the amount is $30 million and thereafter it is $20 million until fiscal 1996. A formula is used to allocate funds among the states.

While the bill does not mandate safety belt use laws, it does provide for a reduction in grants in fiscal year 1987 of 25 percent and in fiscal 1988 of 50 percent if a state fails to enact such a law and a total cutoff of grants in fiscal 1989 for such failure.

It is the states, not the federal Transportation Department, that developed the law, except there is to be a common denominator in some means of enforcement including reasonable fines and their mitigation at a court's discretion in the case of a traffic accident where a belt was used.

A condition of a grant to a state is that the appropriate state agency will work with insurance companies to negotiate a meaningful reduction in premiums for those committing themselves to wear safety belts while driving or riding in a car.

Dingell also commended the announcement of the Automobile Club of Michigan and League General Insurance Co. in Michigan to reduce rates for those who use seat belts. A proposed safety belt use law is being debated by the legislature in Michigan.

Dingell also stressed that using belts remained extremely important whatever the government might decide to do about passive restraints, especially because air bags cost much more and protect only in frontal or off-frontal collisions.

The Dingell bill also directs DOT to develop and carry out a broad educational program to encourage belt use.

This would stress the benefits to employers in cost savings from their workers who use belts and would call for public service promotional campaigns drawn from the "conscience and goodwill" of auto makers, insurance firms, TV, radio, newspapers, movies, magazines, labor, consumers, legal organizations, health care groups and assorted national and community groups.

It also provides a procedure to educate the public on the use of belts to ensure safety and comfort.

One of the problems with the Dingell bill that is likely to be raised is that it is drafted to be

Riviera roof from SKY-TOP

SKY-TOP Sunroofs, Ltd., St. Louis, is marketing this power moonroof to fit the 1984 Buick Riviera. The electric moonroof includes features such as an automatic wind deflector, stainless steel frame and matching trim ring and a privacy sunshade.

DeLorean drug trial postponed indefinitely

By Matt DeLorenzo
Los Angeles Reporter

LOS ANGELES. —U. S. District Judge Robert M. Takasugi indefinitely postponed John Z. DeLorean's drug-trafficking trial here after CBS News and its local affiliate, KNXT, showed government videotapes of the sting operation.

Takasugi also suspended a hearing into the admissibility of two lie detector tests, one administered to the former auto maker by a defense-hired expert and the other by the FBI at the behest of the government.

The hearing will be resumed Nov. 8, at which time Takasugi is expected to decide on a new trial date.

In postponing the trial, Takasugi criticized CBS for showing the tapes and said the network's interference may have "a devastating effect" on the case.

The network and local station allegedly received the tapes from Hustler magazine publisher Larry Flynt. Flynt told a news conference that he got the tapes from someone within the government.

The U. S. Attorney's office vigorously denied that allegation and countered that the tapes may have come from the defense.

As part of the discovery process in the case, the government had given copies of the videotapes showing DeLorean dealing with undercover agents to the defense so DeLorean's attorneys could prepare their case.

Copies of the tapes are also reportedly in the possession of

2 federal groups sued; 55-MPH laxity charged

WASHINGTON. — Two consumer groups and a resident of Massachusetts have sued NHTSA and the Federal Highway Administration (FHWA) over failure to enforce the national 55-MPH speed limit and assess penalties against Massachusetts.

The Center for Auto Safety and Ralph Nader's Public Citizen group have asked a federal district court in the District of Columbia to force FHWA to withhold up to 5 percent of certain classes of federal highway money from Massachusetts for fiscal 1984 and not to approve future federal-aid projects for the state.

In the alternative, says the suit, NHTSA and FHWA should decide within 10 days whether to accept the state's certification that it enforced the national speed limit in fiscal 1982. Under the law, states must certify that no more than half the vehicles exceed the national speed limit or risk certain penalties.

Last March, former NHTSA head Raymond A. Peck and FHWA head Ray Barnhart told the state that the level of noncompliance could be as high as 56.3 percent and proposed to find the state in violation of the law.

Despite this finding, says the suit, FHWA in early October apportioned to Massachusetts its full share of federal highway money. FHWA and NHTSA acted illegally by failing to decide whether financial sanctions were needed before making that apportionment, according to the suit.

The Reagan Administration came into office with the promise to repeal the 55-MPH national speed limit, but the speed limit is still part of the Federal-Aid Highway Act.

The suit contends that FHWA and NHTSA failed to reach a decision on the Massachusetts certification, failed to assess penalties or get the state to comply and that this increases the risk of death and injury to people living or traveling in the state.

The suit was filed on the eve of the Senate confirmation hearing about Diane Steed becoming the head of NHTSA.

American Center sold by AMC for $51 million

SOUTHFIELD. — American Motors received $51 million for its corporate headquarters building here. The sale was finalized Oct. 21.

Purchasers were the Hall Real Estate Group, Dallas, owned by Craig Hall; Michigan developer Martin Ross, and Detroit attorney Erwin Ziegelman.

AMC agreed to the sale to help finance its future product plans. It will continue to occupy about 35 percent of the 25-story American Center complex.

Other offices occupy the rest of the building. Ninety-four acres of adjacent land were included in the sale.

August total tops '82 by 23 pct.

Month's registrations best since '79

By Jenny L. King
Staff Writer

New-car registrations in August were highest for that month in four years and they beat out August, 1982, by the wide margin of 23.27 percent.

The August total was third best so far this calendar year, behind June and July, according to figures compiled by R. L. Polk & Co.

Registrations of new domestic and imported cars reached 773,362 in August, up 23.27 percent over 627,374 a year earlier, and down 1.98 percent from 789,016 in July of this year.

It was the strongest showing for an August since 1979 when 877,157 cars were registered. In 1978, the record for the month was established: 1,060,588 units.

Domestic registrations numbered 527,282, up 27.65 percent from 413,084 a year earlier. However, they were down more than 34,000 units from July, 1983, when 561,481 new cars were registered.

Imports were up 14.83 percent in numbers — to 246,080 from 214,290—but dropped 2.34 percentage points in penetration, to 31.82 percent from 34.16 percent.

General Motors, Ford Motor Co. and Chrysler Corp. were quick to snap up that lost share. GM was up 2.09 percentage points this August compared with 1982, Ford gained 0.28 percentage points and Chrysler was up 0.35 percentage points.

• American Motors, for which R. L. Polk records only AMC products and no U. S. Renaults as domestics, was down to 0.36 of the total from 0.71 percent,

He 'diverted' $8.5 million, court papers say

Documents trace DeLorean funds

Continued from Page 1

mittee as part of an adversary proceeding arising from the bankruptcy matter. In that suit DeLorean, several of his companies and attorney Thomas W. Kimmerly were charged with fraud and conversion in connection with the missing money.

• In the lawsuit, the creditors committee has sought to keep the assets of DeLorean - owned Logan Mfg. Co. frozen. Investigators have for some time suspected John DeLorean used funds diverted from the sports-car project to acquire Logan in 1979 (Automotive News, March 28, 1983).

In 1978, 132 investors assembled by Oppenheimer & Co. formed the DeLorean Research Limited Partnership (DRLP) and raised about $18.5 million for development work on the sports car, then codenamed the DMC-12.

DRLP then paid $12.5 million to a mysterious Panamanian company, GPD Services, Inc., which was contracted to perform the work.

The British government, through DMC's Belfast subsidiary DeLorean Motor Cars, Ltd., paid an additional $5.15 million to GPD. GPD then subcontracted the work to Colin Chapman and Lotus Cars, but none of the $17.65 million paid to GPD ever found its way into the car project or Lotus coffers.

Much of the evidence presented in court last week came from the files of Swiss attorney Jacques Wittmer. Wittmer represented DMC, DRLP and DMCL in the October, 1978, negotiations.

He became the subject of a legal battle earlier this year in U.S. Bankruptcy Court here. The creditors committee of bankrupt DMC sought court permission to waive the attorney-client privilege.

His files were made available to Price Waterhouse, the creditors committee and DRLP attorneys only after the partnership removed DMC as general partner and appointed a trustee who then waived the client-attorney privilege on behalf of DRLP.

Other evidence came from more than 60 cartons of company files which were hidden in John DeLorean's Bedminster (N. J.) estate and were obtained by the creditors committee last month after a federal judge in New York issued a subpena authorizing the committee to search the house and remove hidden company documents.

Based on the new evidence from the Wittmer files and Bedminster files plus previously introduced evidence, it appears the GPD mystery is all but solved.

DRLP paid GPD $8.5 million in October, 1978, and an additional $4.0 million the following January. In October, John DeLorean and GPD's Marie-Denise Juhan - Perrin established an $8.5 million escrow account which Wittmer administered.

In June, 1979, John DeLorean acquired Logan from Thiokol Corp. with a $6 million loan from Continental Illinois Bank & Trust Co.

In September, 1979, DeLorean gave Swiss bank Rothschild A.G. documents authorizing it to receive the $8.5 million plus accrued interest from the escrow account from Wittmer.

Rothschild presented the documents to Wittmer and he complied with DeLorean's instructions and wire-transferred $9.3 million to a Rothschild account at Chase Mahattan Bank in New York.

The next month, DeLorean obtained an $8.9 million loan from Rothschild in Zurich, through its correspondent bank Pierson, Heldring & Pierson in The Netherlands. The very favorable loan terms, 4.5 percent interest with no payments on either principal or interest due for 10 years, is known as a "super balloon" loan.

Price Waterhouse partner Yale Levin last week filed an affidavit which said there is "probable cause" to believe the sports-car money which went to Rothschild was used as security for the loan to DeLorean.

DeLorean used the $8.9 million to pay off an outstanding personal loan and to pay in $7.5 million in newly created preferred stock to his wholly owned company Cristina, a Nevada corporation. Cristina owns Logan, and used the $7.5 million to pay off the Continental loan and reduce the outstanding working capital loan the company had with Continental.

The creditors committee and DRLP each believe they may have a claim on Logan and other personal assets of John DeLorean because it appears company money may have been used for the purchase of Logan.

Investigators believe Colin Chapman, late founder and chairman of Lotus, pocketed at least the $5.15 million paid to GPD by the British government. That leaves no more than $4.0 million of the missing $17.65 million unaccounted for. Some investigators now believe that associates of DeLorean and Chapman may have divided the remaining money.

Automotive News has learned there is additional evidence, purported to be notes handwritten by John DeLorean in October, 1978, which details a plan whereby a DeLorean-owned company would have used DRLP money to acquire Lotus. The plan was either one that never came to fruition or "an elaborate ruse" to cover the real deal, according to Automotive News sources.

Although the examiner and the creditors committee have been successful in finding the "smoking gun," the federal grand jury investigation into GPD and other DMC matters is bogged down in paperwork and making little or no progress, according to Automotive News sources.

Big Three report record earnings

Continued from Page 1

heavy launch costs, the two volume leaders—Ford and GM—didn't bring out any big-volume all-new cars in the U.S. last quarter.

And demand was so heavy that all the auto makers kept downtime to a minimum and shipped every car they could build, adding to profits.

Auto analysts generally agree the fourth quarter will see another round of record profits, but they hedge on whether the full year will be an alltime high.

Auto Historians elect Conde, present awards

HARRISBURG, Pa. — John A. Conde was elected president of the Society of Automotive Historians at the group's annual dinner meeting here.

Conde is a retired American Motors public relations executive and curator of the Transportation Section of the Henry Ford Museum. He succeeds Dr. David L. Lewis, of the University of Michigan.

Walter E. Gosden was elected vice president. Reelected secretary and treasurer, respectively, were Charles L. Betts Jr. and George B. P. Ward Jr. Elected to the board of directors were: Lewis; Thomas E. Warth, of Osceola, Wis., and R. Perry Zavitz, of London, Ont.

Henry Austin Clark Jr. was the recipient of the Automotive History Award.

The James J. Bradley Award was presented to Helen Jones Early, of Oldsmobile, for her more than 40 years of collecting and preserving automotive historical material.

GM and UAW may begin talks early in Canada

By Marjorie Sorge
Labor Editor

General Motors of Canada and the UAW may begin bargaining early on non-economic issues.

The current contract expires in September, 1984. Bargaining would normally begin in June or July. No date has been set for early talks.

The major non-economic issue is the need for an affirmative action program in the GM plants, according to the UAW.

"Women are under-represented in most of the GM plants," said Robert Nickerson, UAW administrative assistant. "An affirmative action program with input from the union can help make up that difference."

According to a UAW spokesperson, if the issue is raised at GM, it is likely it will be raised at Ford. However, Ford has not yet been contacted, she said.

Rod Andrew, GM of Canada director of personnel, said the company is trying to get more women in the plants and is also trying to meet more frequently with the UAW to solve potential problems.

The number of women employed in the auto industry in Canada dropped from 12.3 percent in March, 1982, to 6.2 percent in March, 1983, according to UAW reports.

Other issues likely to be discussed if early talks are called include the union counseling program and preferential hiring.

6 dealerships join Chicago C-P group

CHICAGO. — Six dealerships, five of them new outlets, have joined the Chicagoland Chrysler-Plymouth Dealers Assn. The group now has 45 members, highest since the mid-1970s.

The new dealerships are Hanley Dawson Chrysler-Plymouth, Ed & Sam Motors, Quality Chrysler - Plymouth and Marquette Park Chrysler-Plymouth, all of Chicago, and Harvey Chrysler-Plymouth, Harvey. The established outlet joining the group for the first time is Bozak Motors, Merriville, Ind.

Connecticut questions BBB procedures

Doubt cast on mediation programs

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — The Connecticut attorney general has given the state's Better Business Bureau 60 days to bring its mediation and arbitration program into compliance with FTC regulations under the 1975 Magnuson-Moss warranty law.

Currently using BBBs for arbitration are Nissan, Volkswagen of America, Jaguar and possibly General Motors for its '84 models.

BBBs also are scheduled to be used if and when the FTC gives final approval to a major tentative settlement with GM over problems involving Type 200 transmissions, diesel engines and premature camshaft wear potentially involving some four million cars.

Joseph L. Lieberman, Connecticut attorney general, wrote FTC Chairman James Miller III that this raised serious questions about the advisability of final acceptance of the GM consent order.

While the consent order does not require the BBB to meet warranty requirements, Lieberman urged reconsideration of the decree because it will put too much stress on BBBs while they are struggling to meet federal standards, especially because millions of car owners may be involved in technically complicated product decisions.

• Meanwhile, Connecticut consumers wishing to exercise their rights under the lemon law or the federal warranty law must be told of the inadequacy of the state BBB program.

The Connecticut lemon law went into effect Oct. 1, 1982.

Lieberman warned that unless the BBB acts to improve its arbitration procedures, consumers may be misled or deceived as to their legal rights and this would be a deceptive trade practice under both Connecticut and federal law.

Assistant Attorney General Garry Desjardins issued an evaluation of the procedure, and its recommendations have been accepted by Lieberman.

The report deals with the second program operated by the BBB—one that purports to meet the FTC warranty regulations issued in July, 1976, under which Nissan, VW and Jaguar operate and the one which GM plans for its '84 models.

But the report notes that that program is not mandatory and neither GM nor the BBB claim that the procedure is in accord with either the lemon law or the FTC warranty regulations.

The lengthy report finds that the state BBB program — the same as the the BBB national program—fails in a number of areas: In its written operating procedures, compliance with the 40-day time limit, giving the consumer adequate notice of alternatives to the oral hearing, exclusion of consequential damages, sufficiency and training of arbitration pools, use of technical advisers and record keeping.

The report notes that the program is nationwide, not statewide. Therefore, the report says, before resorting to litigation, the FTC in Washington "may be the proper agency to make ultimate decisions as to program compliance," especially since certain issues "are not dealt with explicitly in the regulation and involve questions of interpretation." FTC has the authority to take remedial action.

Two major problems found by the state investigators were delay and potential shortage of volunteer arbitrators especially needed to handle complaints about GM defects for transmission and diesel problems which are so complex as to require technical assistance for consumers facing the expertise of manufacturers and dealers.

FTC orders Ford to back up ad claim of higher quality

Continued from Page 2

Built American trucks" in all its ads.

Thomas Gorcyca, consumer research manager of Ford's North American Automotive Operations, said various studies for the past three years showed it topping competitors in quality—and the company finally decided to go public with the claim.

Chrysler had tried to get a copy of Ford's survey, but Ford refused to turn it over. Ford has, however, complied with the FTC request for the study and other data backing its claim.

Gorcyca said the FTC was only doing its job by reviewing comparative claims like Ford's. He added that the questionnaire had been reviewed by the Better Business Bureau and others, which ok'd it.

He added that Ford didn't send the questionnaire out for purposes of making an ad claim. It is a routine, yearly study "paid for by our manufacturing people (parts and service)" to check on the company's own quality progress.

Ford's study was handled by Product and Consumer Evaluation, Farmington Hills, Mich., an independent firm. It was basically commissioned to confirm an earlier study by Rogers National Research, a confidential researcher used by other auto firms.

Chrysler still feels that — no matter how accurate the survey—the 170 individual points covered don't justify the general conclusion drawn.

General Motors stayed out of the fray, but did launch a new ad in its ongoing corporate campaign, the seventh in a series, which uses the headline, "In the ultimate test of quality, people choose GM."

The ad could be interpreted as a rebuttal to Ford. A GM spokesman pointed out that six other ads were all geared to quality.

New-car total hits 773,362

August registrations are highest since '79

Continued from Page 3

and the final category, miscellaneous domestics, with 38 August registrations, lost all its wind and dropped from 0.03 percent to zero percent.

Of note was the ascent of Chrysler over Plymouth for the month: Chrysler pushed into ninth place, Plymouth was in 10th.

In spite of their drop, imports still accounted for the largest segment of the total market in August, 31.82 percent (246,080 in number). Intermediates were next with 26.18 percent (202,477), followed by compacts at 16.36 percent (126,643), standards at 12.11 percent (93,643), subcompacts at 8.54 percent (66,069) and luxury cars at 4.97 percent (38,450).

Of the domestics-only market, intermediates had 38.40 percent, compacts had 24.02 percent, standards had 17.76 percent, subcompacts had 12.53 percent and luxury models had 7.29 percent.

In August, 1982, market class alignment featured imports with 34.16 percent (214,290 units); intermediates at 20.08 percent (125,993); compacts at 15.82 percent (99,254); subcompacts at 14.70 percent (92,220); standards at 10.65 percent (66,811), and luxuries at 4.59 percent (28,806).

New-car registrations for the first eight months of this calendar year were up 15.69 percent from the 1982 level, climbing to 5,821,235 from 5,031,804. Two years ago the total was 5,801,537, making the current sum up 0.34 percent in comparison.

Domestic year-to-date registrations of 4,089,409 were up 15.70 percent from 3,534,482 a year earlier, and off 0.63 percent from 4,114,206 two years ago.

Chrysler Corp. was the only maker to improve its standing for the period. It was up 0.87 percentage points, to 9.46 percent from 8.59 percent. GM was off 0.15 percentage points, Ford was down 0.20 percentage points, AMC dropped 0.49 percentage points and miscellaneous domestics shrank to 0.01 percent from 0.04 percent. Imports remained at 29.75 percent of the total market.

Excluding imports, GM products represented 61.82 percent of the total, Ford had 23.80 percent, Chrysler had 13.47 percent, AMC had 0.90 percent and miscellaneous domestics had 0.01 percent.

GMAC profits are $242 million, 3rd-quarter peak

DETROIT. — General Motors Acceptance Corp. reported another record-setting quarter, with improvement in all its segments: Financing, insurance and leasing.

Net income of $242.5 million set a record for the third quarter and was the third-highest quarter ever. The two more profitable quarters were the first quarter of this year ($257.1 million) and the second quarter of this year ($250.9 million).

That means GMAC has made profits of $750.5 million this year — more than it made in its first 45 years of operations combined, a GMAC spokesman said. GMAC is now in its 64th year.

Earnings for the third quarter were 22 percent higher than 1982's $198.9 million, the previous third-quarter record. GMAC credited lower borrowing costs, higher levels of earning assets, higher investment income from Motors Insurance Corp. and improved underwriting results.

GMAC financed 40 percent of GM dealers' retail sales during the third quarter.

Makers schedule 167,452 for week

Car production highest in 2½ years

By Mary Beth Mayer
Staff Writer

Estimates by the domestic auto makers made last week the best week for car production in nearly 2½ years.

Output was targeted at 167,-452, the highest total for any week since 172,443 cars were completed the week ending May 16, 1981.

The week's total topped the previous week's output of 160,-611 by 4.26 percent and was 58.61 percent above the year-ago week's 105,580.

Breakdown for the week by company was: General Motors, 54.05 percent; Ford Motor Co., 24.73 percent; Chrysler Corp., 15.05 percent; American Motors, 3.73 percent; Volkswagen of America, 1.54 percent, and Honda, 0.90 percent.

So far this year, there have been 5,535,164 cars completed, up 28.29 percent from 4,314,574 units finished at this time in 1982.

GM's Tarrytown, N. Y. (Citation, Phoenix), and Willow Run, Mich. (Skylark, Omega), plants are due back today (Oct. 31) after two weeks of downtime because of a parts shortage.

Sixteen auto assembly points worked overtime last week.

GM had four facilities working two shifts last Saturday (Oct. 29). Working Saturday hours were Detroit, Flint (B-D line), Lansing (B-D and G lines) and Oklahoma City.

Working extra daily and Saturday hours for Ford last week were Atlanta, Chicago, Edison (N. J.), Kansas City, Lorain (O.) and St. Louis. Ford's Wayne point worked extra daily hours only.

Chrysler's four facilities put in extra daily time last week. Belvidere (Ill.), Newark (Del.) and St. Louis No. 1 operated two 9-hour shifts while Jefferson (Detroit) worked two 8½-hour shifts.

AMC had its Kenosha plant working last Saturday. AMC has increased its Alliance and Encore output from 900 per day to 1,150.

Ford plans daily extra hours this week for Atlanta, Chicago, Edison, Kansas City, Lorain, St. Louis and Wayne. Chicago, Edison, St. Louis and Wayne are also slated to work Saturday (Nov. 5).

This week, Chrysler has scheduled its four plants to follow the same daily overtime schedules as last week. In addition, two 8-hour Saturday (Nov. 5) shifts will be worked at Belvidere, Newark and St. Louis.

Nissan hike averages $399 on 1984 cars and trucks

CARSON, Calif. — Nissan U.S.A. has raised prices an average of $399, or 4.2 percent, on its 1984 cars and trucks.

The average would be considerably lower were it not for substantial boosts of $600 to $1,200 on the high-volume 300-ZX sports cars and hikes of $530 and $640 on the Maxima four-door sedan and wagon.

Aside from those models, most of the Nissan increases range from $200 to $350.

Nissan's price leader for '84 is the Standard two-door sedan in the best-selling Sentra line. It's $5,199, up $200. The Deluxe two-door is $6,349 and the Deluxe four-door is $6,549. Both are up $250.

Biggest increase in the Sentra line is $450 on the XE two-door hatchback. The '84 model is $7,-449, a boost of $450.

There were hikes of $400 on the XE hatchbacks in the Stanza series. The two-door is $8,299 and the four-door is $8,499. The new Stanza GL four-door sedan is $9,099. The Pulsar NX coupe is $7,749, up $350.

The Maxima four-door sedan is $11,399 (up $530) and the Maxima four-door wagon is $12,799 (up $640).

Prices of the 300-ZX (Automotive News, Oct. 24) are $15,-799 for the coupe, $16,999 for the 2+2 coupe and $18,199 for the Turbo Coupe. The increases are $1,000, $1,200 and $600, respectively.

The 200-SX will be priced when it is introduced next spring.

Nissan's lowest-priced pickup truck is a regular-bed model at $5,999. Other models range from $7,195 to $9,745.

The Deluxe regular bed is $7,195 and the Deluxe long bed is $7,345. Both are up $350. The Deluxe King Cab, at $7,795, is also up $350.

On four-wheel-drive pickups, there were hikes of $250 each on the Deluxe regular bed, now $8,-995; the Deluxe long bed, now $9,145, and the Deluxe King Cab, now $9,595.

At the top of the line is the 4x4 regular bed Sport Truck at $9,745, unchanged from '83.

Truck production climbs; 10 plants work overtime

With 10 assembly plants working extra hours last week, domestic truck production was targeted at 57,465, leading both the week-ago and year-ago totals.

The week's total was 2.94 percent better than 55,826 trucks finished in the previous week and 48.48 percent ahead of 38,-703 units built last year.

Year-to-date, there have been 1,959,290 trucks built, a 19.75 percent improvement over the 1,636,282 last year.

General Motors' Pontiac No. 6 point returned to work last week after being closed a week for inventory adjustment.

GM had three truck plants working last Saturday (Oct. 29). GM's Flint No. 1 and Detroit plants were on one shift Saturday, while Lordstown (O.) and Flint No. 2 put in two shifts.

All six of Ford's truck facilities were on overtime last week. Kansas City, Lorain (O.), Norfolk (Va.), Wayne (Mich.) and Twin Cities (Minn.) put in daily and Saturday extra hours last week, while Louisville worked extra daily hours only.

This week, Ford plans overtime during the week at Kansas City, Lorain, Norfolk, Wayne and Twin Cities. Lorain and Wayne will work Saturday (Nov. 5) as well.

Ford has announced that it will boost production at its Louisville plant in mid-February by 35 percent.

Canadian output of cars, trucks rises for week

Last week's Canadian car production was targeted at 20,289, up 1.86 percent from the 19,919 units assembled the week before, but down 7.85 percent from the 22,016 built in the year-ago period.

So far this year, the manufacturers have completed 789,986 cars, leading the year-ago output of 711,176 by 11.09 percent.

The truck makers estimated last week's production at 13,384, a 3.20 percent improvement over the 12,970 units finished the previous week and 41.54 percent better than the 9,456 trucks built in the year-ago week.

Year-to-date, the truck makers have assembled 440,777 units, up 5.56 percent over the 417,570 at this time last year.

So far, there have been 1,665 T-115 minivans built at Chrysler Corp.'s Windsor (Ont.) facility, the company said. It was estimated that 994 minivans were assembled last week, up from the 599 built the week before. Last week's T-115 estimate includes 426 Plymouth Voyagers, 431 Dodge Caravans and 137 Mini Ram Vans.
